

April 26, 2022

**Ms. Maureen Hatfield, P.G.** Texas Commission on Environmental Quality MC-127 VCP-CA Section, Team 1, Remediation Division P.O. Box 13087 Austin, Texas 78711-3087

### RE: WEEKLY STATUS UPDATE – ENGLEWOOD YARD NORTH BYPASS PROJECT UNION PACIFIC RAILROAD HOUSTON WOOD PRESERVING WORKS SITE 4910 LIBERTY ROAD FACILITY, HOUSTON, TEXAS POST-CLOSURE CARE PERMIT NO. 50343, INDUSTRIAL SWR NO. 31547

Dear Ms. Hatfield:

Golder Associates USA Inc. (Golder), a member of WSP, on behalf of Union Pacific Railroad (UPRR), prepared this weekly status update for the Englewood Yard North By-Pass Project (the Project) that includes areas of construction within the UPRR Houston Wood Preserving Works (HWPW) site (the Site) (Post-Closure Care Permit No. 50343) located at 4910 Liberty Road, Houston, Texas. Below is a summary of the Project activities conducted at the Site for the reporting period:

### Week Period: April 18 through April 24, 2022

Activities that generated soils during this weekly period included excavation for the concrete pier protection wall area located under the Waco St. bridge outside of the capped areas. Excavation activities only occurred on April 19, 2022. Excavated soils from this area, which are characterized as Class 2 non-hazardous, were loaded into a haul truck and disposed of as Class 2 non-hazardous waste.

- Dust Control and Air Monitoring (summary taken from IHST Weekly Report of Air Monitoring
  - IHST conducted real time air and dust monitoring at the Site in accordance with the Air Monitoring Plan (July 8, 2021), and the results are provided in **Attachment A**.
  - As indicated in the IHST Weekly Report (Attachment A), there were no events where PM 2.5 and PM 10 readings increased above the Take-Action Level or Stop-Work Level during the monitoring period. Samples were not collected for this period, with excavation activities only occurring on April 19, 2022.

Golder Associates USA Inc. 14950 Heathrow Forest Parkway, Suite 280, Houston, Texas, USA 77032

T: +1 281 821-6868

### Soil Management

- Approximately 90 cubic yards (CY) of soil classified as Class 2 non-hazardous waste were generated during the excavation activities. The soil generated was loaded into haul trucks and disposed of at the Republic Services McCarty Road Landfill in Houston, TX.
- On April 19, 2022, Non-Hazardous Class 2 Waste Profile 51132130558 (Soil Impacted with RCRA Metals) for disposal at McCarty Landfill in Houston, TX (Attachment 1). WT-Byler excavated soil on April 19, 2022, loaded into haul trucks, and disposed of the soil at the Republic Services McCarty Facility (Non-Hazardous Class 2 Waste (Attachment 1 final manifests and scale tickets)).
- On April 20, 2022, Non-Hazardous Class 2 Waste Profile 51132130558 (Soil Impacted with RCRA Metals) for disposal at McCarty Landfill in Houston, TX (Attachment 1). US Ecology removed two roll-off boxes containing excavated soils on April 20, 2022 and disposed of the soils at the Republic Services McCarty Facility (Non-Hazardous Class 2 Waste (Attachment 1 final manifests and scale tickets)).

### <u>Stormwater Management</u>

• There was no rainfall during this reporting period that resulted in management of stormwater within the site.

Planned Construction Activities for the period between April 25 and May 1, 2022:

Per the Contractor schedule, planned construction activities for the concrete pier protection wall located under the Waco St. bridge will resume. Construction activities will consist of installing the concrete footings and rebar framework in the area identified as adjacent to the ballast cap. No soil excavation activities in the cap areas is anticipated for this period.

### Dust Control and Air Monitoring

• Air monitoring per the approved Air Monitoring Plan (July 8, 2021) will continue to be conducted as soil excavation activities are taking place.

### Soil Management

 Managing excavated soils, in the event excavated soils are generated, will follow the approved Soil Management Plan (SMP).

### <u>Stormwater Management</u>

• Stormwater management, in the event of rainfall in the area, per the approved Storm Water Pollution Prevention Plan (SWPPP) will be conducted.

If you have any questions or need additional information, please feel free to contact Mr. Kevin Peterburs of UPRR at (414) 267-4164.

Sincerely,

Golder Associates USA Inc.

## Weekly Report of Air Monitoring

Union Pacific Railroad North Bypass Construction Project

Former Houston Wood Preserving Works Site Houston, TX

For Period from 2022-04-18 to 2022-04-24

### Contents

Summary Results of Daily Dust Monitoring	. 3
Summary Results of Daily Weather Conditions	. 5
Daily Time History Detail for PM 2.5 and PM 10 Dust Levels	.7
Results of Integrated Air Samples for Metals1	12
Results of Integrated Air Samples for Polynuclear Aromatic Hydrocarbons (PAH)1	13

### **Summary Results of Daily Dust Monitoring**

This section provides overall summary results for perimeter dust monitoring conducted during the week specified. Dust monitoring results include the average PM 2.5 and PM 10 monitoring results over the sample period at each sample location for each day. Each day's summary provides also includes a description of the work activities performed that day, and any items, issues or occurrences of note.

The 24-hour USEPA National Ambient Air Quality Standard (NAAQS) for PM 2.5 particulate matter is 35 ug/m3, and 150 ug/m3 for PM 10 particulate matter. The Texas Department of Environmental Quality (TCEQ) has adopted these values. UPRR has established dust control levels for railroad construction activities to help ensure that particulate levels do not exceed the 24-hour NAAQS as a result of construction activities.

Overall averages provided are for the sample period specified by the start and stop times. Unless otherwise specified, the sample periods are inclusive of all potentially significant dust generating activities.

Location of air sampling stations are consistent the Dust Control and Air Monitoring Plan dated 7/8/2021 and approved by the Texas Commission on Environmental Quality (TCEQ). Minor variations in station placement may occur, based on work activities, environmental factors, observed patterns of dust dispersion and practical constraints. One sample location specified in the original plan, located on the far southwest corner of the site just southwest of Kirk Street, has not been used to date. The originally proposed location is not readily accessible for daily equipment deployment and is outside of the current excavation areas of the construction. No excavation or other dust-generating activities have taken place to date in the vicinity of this location. Construction plans include improvements to access for this location prior to the start of such activities. Air monitoring equipment will be deployed to this location once access improvements are completed and before excavation or other dust-generating activities begin in this area.

**Note:** During the week covered by this report, excavation activities occurred only on Tuesday, April 19, 2022. Air monitoring was conducted only on this day.

### PM 2.5 and PM 10 Daily Summary Results

Sample Date Apr 19, 2022

## Description of Work Performed

Work plan for the day included backhoe excavation for crash wall footings near the Waco Street overpass columns immediately south of the railroad fencing on the north side of the tracks, near the end of Altoona Street. Work hours were from approximately 07:30 – 16:22.

### **Overview Map of Daily Sample Locations**

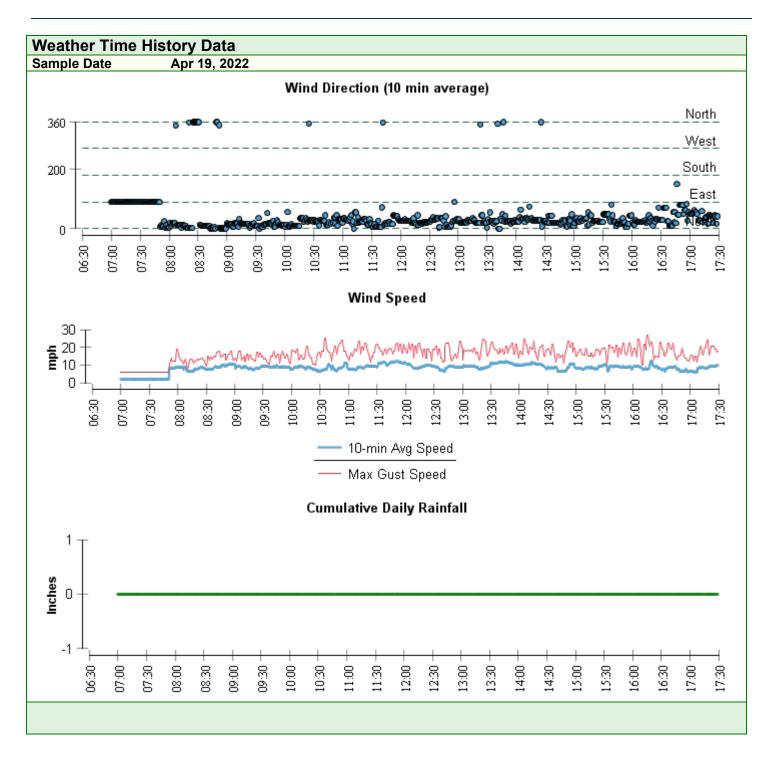

Station ID	Location Description	Start	Stop	Latitude	Longitude	Overall Average PM 2.5	Overall Average PM 10
AMS-06	HWPW – Altoona / Waco West	06:54	16:05	29.78306	-95.32731	6 ug/m3	14.7 ug/m3
AMS-08	IMY South - Waco and Lee	80:80	23:58	29.78200	-95.32663	5.4 ug/m3	13.3 ug/m3
AMS-09	HWPW – Altoona / Waco East	06:49	16:02	29.78323	-95.32684	6.9 ug/m3	15.5 ug/m3
AMS-10b	IMY SW - Kabee	07:59	23:59	29.78181	-95.32755	5.5 ug/m3	13.3 ug/m3

## **Summary Results of Daily Weather Conditions**

This section provides charts showing wind speed, wind direction and rainfall during each day of sampling during the specified week.

**Note:** During the week covered by this report, excavation activities occurred only on Tuesday, April 19, 2022. Air monitoring was conducted only on this day.

## Daily Time History Detail for PM 2.5 and PM 10 Dust Levels

This section provides charts showing the rolling thirty-minute average concentrations of PM 2.5 and PM 10 particulates measured at each location on each sample day during the specified week.

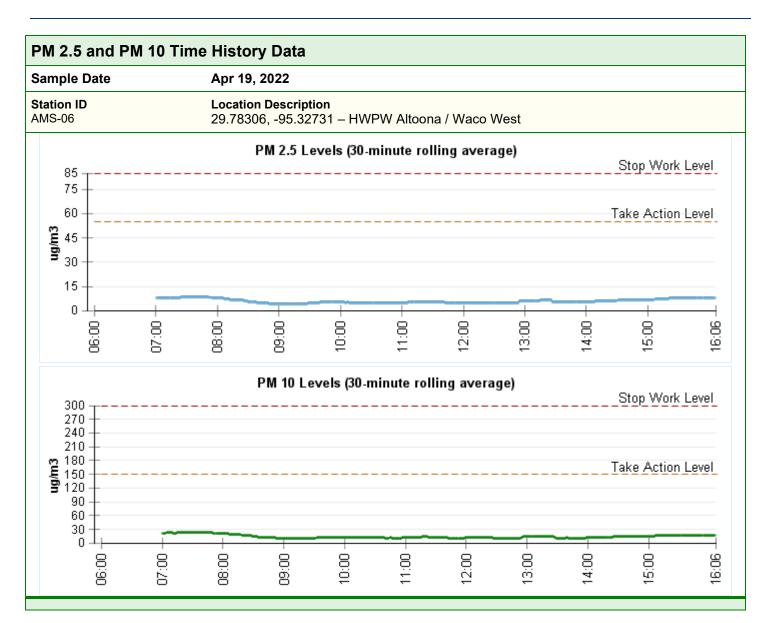

PM 2.5 and PM 10 airborne particulate levels are measured every two minutes during the active sampling period. The charts track the average particulate concentrations over the past 30 minutes at the time of the measurement.

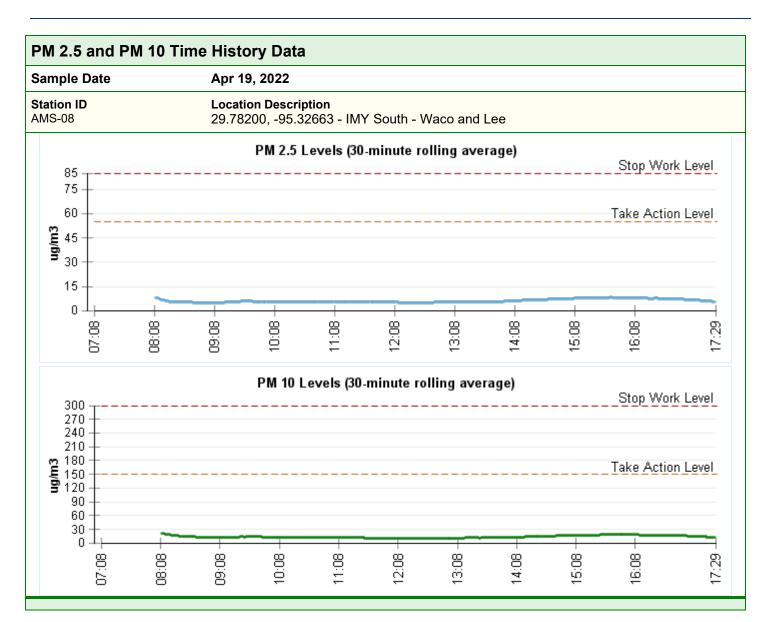

Union Pacific Railroad (UPRR) has established control levels for airborne particulates to help ensure that constructionrelated dust levels are adequately controlled. These levels are explained as follows:

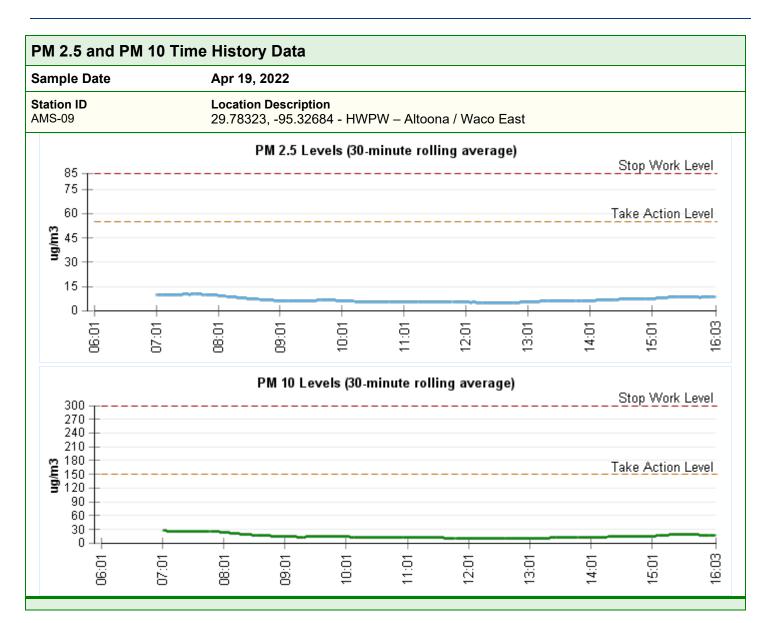

- Take-Action Level 30-minute average dust concentrations >55 ug/m3 (PM 2.5) or >150 ug/m3 (PM 10) Additional dust control measures, as outlined in the site dust control plan, will be promptly implemented to reduce levels below the Take-Action Level.
- Stop-Work Level 30-minute average dust concentrations >85 ug/m3 (PM 2.5) or >300 ug/m3 (PM 10) Work will be stopped immediately, as outlined in the site dust control plan, and UPRR will evaluate dust control measures. Work will not resume until UPRR has implemented additional controls that will effectively prevent generation of dust levels above the Stop-Work Level.

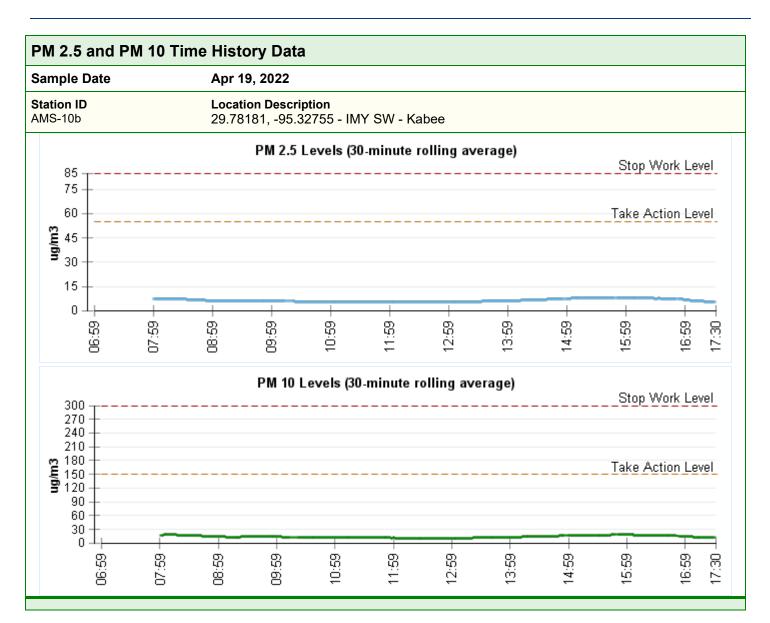

Air monitoring stations may exhibit higher than actual readings during the first 5 - 10 minutes after startup, before the instrumentation has fully warmed up. This is a known and expected behavior of the instrumentation.

**Note:** During the week covered by this report, excavation activities occurred only on Tuesday, April 19, 2022. Air monitoring was conducted only on this day.

## **Results of Integrated Air Samples for Metals**

This section provides results of integrated air samples collected for lead and arsenic.

Integrated air samples are air samples collected by drawing a known volume of air through filters, sorbents or other media and then submitted to a qualified independent laboratory analysis. Integrated samples for selected metals (lead and arsenic) are collected and reported for this project. Integrated air sample results lag behind real-time results, due to the time required for sample collection, shipping, analysis and data validation. Results provided in this report are the results received and validated since the last weekly report.

Data items included on this report are explained as follows:

- Sample Number: The unique identifier for the sample.
- **Date:** The date on which the sample was collected.
- Start: The time at which sample collection began.
- **End:** The time at which sample collection ended.
- Station ID: The name of the air monitoring station where the sample was collected.
- Location: The geographic coordinates and general area description, indicating the location where the sample
  was collected.
- Agent: The name of the chemical substance(s) for which the sample was analyzed.
- Airborne Concentration: The unique identifier for the sample.
- **Short-Term AMCV:** The Short-Term Air Monitoring Comparison Value (AMCV) for the agent. N/A means no short-term AMCV has been established for the specified agent.
- Long-Term AMCV: The Long-Term Air Monitoring Comparison Value (AMCV) for the agent. N/A means no long-term AMCV has been established for the specified agent.

### About the Air Monitoring Comparison Values (AMCV)

Air Monitoring Comparison Values (AMCV) are chemical-specific air concentrations determined by the Texas Department of Environmental Quality (TCEQ) and intended to protect human health and welfare. Exposure to an air concentration at or below the AMCVs is not likely to cause adverse health effects in the general public, including sensitive subgroups such as children, the elderly, pregnant women, and people with preexisting health conditions. They are *not* intended for use as an indicator or threshold of harm or disease. AMCV have not been established for all chemicals. TCEQ currently has AMCV's appropriate for air monitoring for approximately 120 chemicals. Both short-term and long-term AMCVs may be established. These are explained as follows:

- Short-Term AMCV: The short-term AMCV, based on acute exposure health and welfare data, is compared to
  monitored concentrations that can be 30 minutes to 1-hour, which represent a point in time for a specific
  location.
- Long-Term AMCV: The long-term AMCV, based on chronic health and welfare data, is used to evaluate annual averaged monitored concentrations or annual concentrations averaged over multiple years (if available), which represent multiple points in time for specific locations.

Air samples for lead and arsenic are collected, based on the results of prior soil sampling at the Houston Wood Preserving Works site. However, soils from the former Houston Wood Preserving Works site are not the only sources of these agents. These agents may be produced by a variety of sources. Lead may be produced from ore and metals processing, piston-engined aircraft operating on leaded aviation fuel, waste incinerators, lead-acid battery manufacturers and recyclers and smelting operations. Arsenic may be produced from pesticides, ore and metals processing, semiconductor and LED manufacturing, and lead-acid battery manufacturers and recyclers. Both metals also occur naturally.

*Note:* No air samples for metals were collected this week.

## **Results of Integrated Air Samples for Polynuclear Aromatic Hydrocarbons (PAH)**

This section provides results of integrated air samples collected for polynuclear aromatic hydrocarbons.

Integrated air samples are air samples collected by drawing a known volume of air through filters, sorbents or other media and then submitted to a qualified independent laboratory analysis. Integrated samples for selected metals and polynuclear aromatic hydrocarbons are collected and reported for this project. Integrated air sample results lag behind real-time results, due to the time required for sample collection, shipping, analysis and data validation. Results provided in this report are the results received and validated since the last weekly report.

Data items included on this report are explained as follows:

- Sample Number: The unique identifier for the sample.
- **Date:** The date on which the sample was collected.
- Start: The time at which sample collection began.
- **End:** The time at which sample collection ended.
- Station ID: The name of the air monitoring station where the sample was collected.
- Location: The geographic coordinates and general area description, indicating the location where the sample was collected.
- Agent: The name of the chemical substance(s) for which the sample was analyzed.
- Airborne Concentration: The unique identifier for the sample.
- **Short-Term AMCV:** The Short-Term Air Monitoring Comparison Value (AMCV) for the agent. N/A means no short-term AMCV has been established for the specified agent.
- Long-Term AMCV: The Long-Term Air Monitoring Comparison Value (AMCV) for the agent. N/A means no long-term AMCV has been established for the specified agent.

### About the Air Monitoring Comparison Values (AMCV)

Air Monitoring Comparison Values (AMCV) are chemical-specific air concentrations determined by the Texas Department of Environmental Quality (TCEQ) and intended to protect human health and welfare. Exposure to an air concentration at or below the AMCVs is not likely to cause adverse health effects in the general public, including sensitive subgroups such as children, the elderly, pregnant women, and people with preexisting health conditions. They are *not* intended for use as an indicator or threshold of harm or disease. AMCV have not been established for all chemicals. TCEQ currently has AMCV's appropriate for air monitoring for approximately 120 chemicals. Both short-term and long-term AMCVs may be established. These are explained as follows:

- Short-Term AMCV: The short-term AMCV, based on acute exposure health and welfare data, is compared to
  monitored concentrations that can be 30 minutes to 1-hour, which represent a point in time for a specific
  location.
- Long-Term AMCV: The long-term AMCV, based on chronic health and welfare data, is used to evaluate annual averaged monitored concentrations or annual concentrations averaged over multiple years (if available), which represent multiple points in time for specific locations.

Air samples for polynuclear aromatic hydrocarbons (PAHs) are collected, based on the results of prior soil sampling at the Houston Wood Preserving Works site. However, soils from the former Houston Wood Preserving Works site are not the only sources of these agents. PAHs may be produced by a variety of sources, including power generation, vehicle and aircraft exhaust, burning of wood or garbage, cement manufacturing, rubber tire manufacturing and burning, various chemical manufacturing, wildfires and application of pesticides.

Note: No air samples for polynuclear aromatic hydrocarbons were collected this week.

#### Dear Becky Meredith,

Your Waste Stream Disposal Information form for the above waste stream has been approved.

Under conditions of our operating permit, US Ecology Texas, Inc. is required to inform you that we have all the appropriate permits in order to manage your waste stream. We have received the requisite permits to operate a TSD facility. Our TCEQ permit was renewed on March 25, 2013 and our permit number is HW-50052.

The EPA Uniform Hazardous Waste Manifest (EPA Form 8700-22), appropriate LDR form/certification and Truck Inventory Sheet (if shipping in drums) must accompany each shipment. To obtain manifest, Please visit the EPA website for an approved vendor list

Please notify the Texas facility at (800) 242-3209 at least 48 hours prior to shipment and provide the facility with the following information:

- Date of Shipment
- Date of Delivery
- U.S. EPA Generator ID Number
- Waste Stream Number(s)
- Total quantity of each waste stream number being shipped

Any shipment arriving at the facility without prior scheduling and/or all the appropriate paperwork will be subject to rejection.

Should you have any questions, please contact your US Ecology Texas, Inc. Technical Sales Representative at (800) 242-3209. Please refer to the US Ecology Texas, Inc. waste stream number above when making inquiries.

Sincerely,

the Yeary

# E-MAIL – Approval Letter

То:	Amanda Kelly		Via E-MAIL	_
From:	Samantha Barrera	Date:	1/13/2022	_
Re:	Old Weathered Utility Power Poles	Pages:	2	_
Republic Approval Number:	5112220076			
				•

The above referenced waste stream for Union Pacific Railroad (UPRR) been approved for acceptance at our Blue Ridge Landfill. The expiration date is December 9, 2022.

Please include the approval number on each manifest to the landfill, as an incomplete approval number could result in a delay and/or rejection of the load. Please note, regarding your manifest, it must have the same description as in our system or load could be held for clarification. The description listed above is the description that we have in our system per your profile.

The driver will need to present the following completed manifest copies to the landfill at the time of disposal: Republic Services Manifest- Original Return to Generator, T/S/D/F. EPA Manifest- Designated Facility to EPA's e-Manifest System, Designated Facility to Generator, Designated Facility.

Asbestos, drummed shipments, and any waste containing free liquids - all must be scheduled with the landfill 24 hours in advance of shipment. An unscheduled load requiring solidification could be rejected if schedule is full.

All bulk containerized shipments (drums, supersacks, totes) will require proper labeling (generator name, waste description and approval number) and be accessible for QA/QC or the load will be rejected. If an offload is needed please call the landfill to verify offload capability.

All drivers must wear proper PPE including a hard hat and a safety vest. In addition, drivers taking material to the asbestos area must wear a fully fitted respirator.

Thank you for allowing Republic Services to handle your waste disposal needs. If you have any questions or concerns, please feel free to give me a call.

Re:	Soil Impacted W RCRA Metals and TPH	Pages:	2
Republic Approval Number:	51122129081		
	• •	•	
			AILROAD has been approved for acceptance
at the Blue I	Ridge Landfill. The expiration date is	6/23/2022.	
Please inclu	ide the approval number on each ma	anifest to the	e landfill, as an incomplete approval number
			ote, regarding your manifest, it must have
			for clarification. The description listed above
			. Each load requires an original manifest.

Asbestos, drummed shipments, and any waste containing free liquids - all must be scheduled with the landfill 24 hours in advance of shipment. An unscheduled load requiring solidification could be rejected if schedule is full.

<u>Also drum shipments must be on pallets and properly labeled (generator name, waste description and approval</u> <u>number) or the load will be rejected</u>. Comingled loads must be shipped in a manner so that each waste stream is accessible for QAQC at the gate house.

<u>All drivers must wear proper PPE including a hard hat and a safety vest.</u> In addition, drivers taking material to the asbestos area must wear a fully fitted respirator.

The Gulf West hours of operations are Monday - Friday 8:00 am to 5:00 pm (closed weekends). The solidification pit closes at 3:00 pm on Fridays at Gulf West.

The Blue Ridge hours of operations are Monday - Friday 7:00 am to 3:00 pm, Saturday 8:00 am to noon. The class 1 cell for Solid and Solidification pit waste is open Monday through Friday 7:00 am to 3:00 PM. You must schedule all class 1 loads with Blue Ridge landfill prior to disposal.

Thank you for allowing Republic Services to handle your waste disposal needs. If you have any questions or concerns, please feel free to give me a call.
