LIST OF APPENDICES

Appendix 1A-1	Analytical Data Reports and Data Usability Summaries – 2011-2014
---------------	--

1.0 INTRODUCTION

This Attachment 1A to the Response Action Plan (RAP) for the Union Pacific Railroad (UPRR) Houston Wood Preserving Works Facility at 4910 Liberty Road, Houston, Texas, (the Site) details the additional investigation activities, results, and associated data tables and figures for the Site following submittal of the Updated Affected Property Assessment Report (APAR) Addendum (PBW, 2010). A Site Plan is provided on Figure 1A. The following media have been evaluated for potential chemical of concern (COC) releases as part of investigations conducted at the Site: surface soils, subsurface soils, and groundwater. Both the soil and groundwater exposure pathways were evaluated as part of the additional Site assessment and considered to be complete and/or anticipated to be complete. In addition, details on the Monitored Natural Attenuation (MNA) for the groundwater COCs are also evaluated in this document.

From 2011 through 2014, additional site assessment activities were conducted to further evaluate the groundwater classification for the B-CZ, better define the soil and groundwater Protective Concentration Level (PCL) Exceedance (PCLE) Zones, and to evaluate the extent of dense non-aqueous phase liquid (DNAPL) in the Englewood Intermodal Yard. Based on the additional data collected at the Site, the Affected Property Map was updated and presented as Figure 1A. Generalized conceptual site model for the Site was prepared and presented as Figures 1C (Southwest-Northeast) and 1D (South-North) showing the groundwater bearing units (GWBU), Affected Property (soil and groundwater), relative potentiometric elevations for the GWBUs, and soil and groundwater pathways. Many of the figures presented in this document are updated figures from the Updated APAR Addendum submitted to the TCEQ in October 2010. Therefore, the figure numbers are the same or similar to the figures in the Updated APAR Addendum (PBW, 2010).

Details on the additional investigations, additional groundwater classification, and soil and groundwater PCLE Zone assessment are provided in the following sections. In addition, information regarding off-site property notification in accordance with Texas Risk Reduction Program (TRRP) Rules 350.55(a) is also provided.

2.0 ADDITIONAL INVESTIGATIONS

Assessment Methods

The additional site investigations were conducted to better understand the TRRP PCLE Zones within the Site's Affected Property for surface soil, subsurface soil, and groundwater. The additional data were collected after completing the Updated APAR Addendum (PBW, 2010) that was submitted to the TCEQ in 2010. The assessment methods used during the investigations are discussed below.

2014 Additional Soil and Groundwater Investigation. In May 2014, Pastor, Behling & Wheeler, LLC (PBW), on behalf of UPRR, conducted a supplemental soil and groundwater investigation at the Site to evaluate the lateral extent of COCs above TRRP PCLs in soils and groundwater and to evaluate DNAPL in the Englewood Intermodal Yard. The following locations were sampled or monitoring wells were installed (locations shown on Figure 1A):

- *Soil Sampling* – Soil samples were collected on May 7, 2014 from soil borings SB-148 through SB-155 along the northern perimeter of the Site near the Former Aboveground Storage Tank (AST) Area (Solid Waste Management Unit (SWMU) 8) between the fence line and Liberty Road in the City of Houston right-of-way (ROW) (Figure 4A-14). Soil samples were collected where a leaky Centerpoint Energy natural gas line was identified. Soil samples along the northern perimeter were drilled to evaluate potential off-site impacts from the historical operations at the Site. Soil samples were selected from each boring and analyzed for the Site-specific COCs. After each soil sample was collected, the boring was backfilled with the soil cuttings from the hand augering. Each soil boring was surveyed in the field with the differential global positioning satellite (GPS) meter.
- *Monitoring Well Installation/Development* – During the May 2014 investigation, the following monitoring wells were installed:
 - i. Three A-TZ wells, MW-77A, MW-78A, and MW-79A, were installed to evaluate potential DNAPL in the Englewood Intermodal Yard area;
 - ii. Two B-CZ wells MW-80B and MW-81B, were installed by sonic drilling techniques to evaluate dissolved COC concentrations in the B-CZ unit downgradient of MW-75B in the Englewood Intermodal Yard area.
 - iii. One C-TZ well, MW-76C, was installed in the Englewood Intermodal Yard using sonic drilling techniques to evaluate the downgradient edge of the C-TZ PCLE zone; and
 - iv. Damaged monitoring wells MW-24AR, MW-24B, and MW-24C were plugged and abandoned per TCEQ approval.

Monitoring well locations were selected based on the results of the cone penetrometer tests with rapid optical screening tool (CPT/ROST) investigation conducted in 2013. After each monitoring well was installed, the wells were developed to remove sediment from the wells. Permanent monitoring wells were surveyed by a licensed, professional surveyor to Texas State Plane coordinates (NAD 27, Texas South Central, U.S. Feet).

Soil samples were analyzed for site-specific COCs to evaluate the Affected Property. Each soil sample was placed in a laboratory-supplied container, preserved as appropriate, immediately placed on ice and delivered to TestAmerica Laboratories in Houston, Texas for analysis. The samples were analyzed in accordance with EPA protocol for the analytical methods requested. Chain-of-custody procedures were maintained from the field through the reporting of laboratory results. Field quality assurance/quality control (QA/QC) samples (i.e., field duplicates, equipment blanks) were also collected.

DNAPL Recovery Testing – February 2013. PBW initiated a 24-month pilot study in February 2013 to evaluate DNAPL recovery by conducting tests on selected wells

Well Name	Zone	Min. DNAPL Thickness (ft.)	Max DNAPL Thickness (ft.)
MW-57A	A-TZ	4.11	4.25
MW-12B	B-TZ	0.41	5.70
MW-41B	B-TZ	5.06	24.14
MW-57B	B-CZ	0.44	0.50
MW-32B	B-CZ	5.77	6.13
MW-33BR	B-CZ	0.30	0.30
MW-70B	B-CZ	1.44	1.53
MW-75B	B-CZ	1.84	1.90
MW-34C	C-TZ	7.24	7.60
MW-44C	C-TZ	0.75	7.10
MW-45C	C-TZ	0.39	1.50
MW-46C	C-TZ	0.10	1.25

The pilot test procedures consisted of measuring the depth to groundwater surface, the depth to the groundwater/DNAPL interface, and the total depth of the well relative to the top of well casing prior to DNAPL recovery. Using a peristaltic pump, DNAPL was pumped from the bottom of the well until groundwater is returned in the pump discharge. The volume of recovered DNAPL was estimated from each well, and the well was gauged to measure the total depth of the well and depth to residual DNAPL following pumping. Recovered DNAPL was temporarily stored at the Containment Storage Area. Results to date from the pilot test are discussed in Appendix 3 of the RAP.

2013 Englewood Intermodal Yard Soil, Groundwater and CPT/ROST Investigation. In January 2013, PBW conducted a soil, groundwater, and cone penetrometer with rapid optical screening tool (CPT/ROST) investigation at the Site focused in the Englewood Intermodal Yard area to evaluate the lateral and vertical extent of COCs above TRRP PCLs in soils and preliminarily evaluate the presence of DNAPL in the subsurface. The following locations were sampled or investigated using direct push sampling, hydropunch, and CPT/ROST techniques (locations shown on Figure 1A):

- *Soil Sampling* - Soil samples were collected from soil borings adjacent to CPT/ROST borings IM-CPT-01 through IM-CPT-22 along the southern and eastern perimeters of the Englewood Intermodal Yard to evaluate COCs in surface and subsurface soils. Soil borings along the southern and eastern perimeters were advanced to evaluate potential for off-site impacts from the historical operations at the Site. Soil samples were selected from each boring based on field screening organic vapor meter (OVM) readings, high ROST signatures and/or visual observations. After each soil boring was drilled to the target depth, the boring was backfilled with granular bentonite or bentonite pellets. Each soil boring was surveyed in the field with the differential global positioning satellite (GPS) meter.
- *Hydropunch Groundwater Sampling* – Groundwater samples were collected at locations IM-CPT-01, IM-CPT-03 through IM-CPT-06, IM-CPT-08 and IM-CPT-09 using Hydropunch sampling technology, which allowed for groundwater sampling to be conducted while advancing the soil boring. Samples were collected along the southern and eastern perimeters of the Englewood Intermodal Yard to evaluate potential creosote impacts to groundwater within the yard and to evaluate potential off-site impacts.
- *CPT/ROST* – CPT/ROST data were collected at locations IM-CPT-01 through IM-CPT-23 along the southern and eastern perimeters of the Site, in the Englewood Intermodal Yard, to evaluate lithology and potential creosote impacts within the yard. CPT/ROST data were used to help determine soil and groundwater sampling intervals for the hydropunch samples.

2013 Englewood Intermodal Yard Pavement Reconstruction Soil Investigation. In March 2013, PBW conducted a shallow soil investigation at the Englewood Intermodal Yard to evaluate COCs in surface soils. Samples were collected in areas where repair to the concrete pavement were planned to be conducted. Soil samples were collected from soil borings SB-1 through SB-13 along the main lines and loading/unloading areas within the Englewood Intermodal Yard, to evaluate COCs in the shallow surface soils. After each shallow soil boring was drilled, it was backfilled with granular bentonite or bentonite pellets. Each soil boring was surveyed in the field with the differential GPS meter. Locations are shown on Figure 1A.

2012 Additional Aquifer Testing, B-CZ Zone Wells In March 2012, PBW conducted a series of pump-down tests and slug tests on the following wells:

Well Number	Test Type
MW-15B	Constant Discharge
MW-32B	Slug Test
MW-33BR	Constant Discharge
MW-68B	Constant Discharge
MW-70B	Slug Test
MW-71B	Constant Discharge
MW-74B	Constant Discharge

Slug tests were conducted on wells MW-32B and MW-70B using a solid slug for conducting slug in and slug out tests. The other wells (MW-15B, MW-33BR, MW-68B, MW-71B, and MW-74B) were tested using constant discharge tests to evaluate well yield. These wells were pumped continuously at a discharge rate equivalent to 0.1 gallons per minute (gpm), or 150 gallons per day (gpm).

Semi-Annual Groundwater Monitoring Events. PBW conducted Site wide semi-annual groundwater monitoring to evaluate COC trends in the groundwater at the Site. Site-wide events were conducted in the following months (number of wells sampled, not including the 10 SWMU 1 point of compliance (POC) wells):

- January 2011 (70 wells);
- July 2011 (70 wells);
- January-February 2012 (75 wells);
- July 2012 (67 wells);
- January 2013 (68 wells);
- July 2013 (76 wells);
- January 2014 (74 wells); and
- July/August 2014 (89 wells).

Groundwater samples were collected using low-flow sampling techniques described in the EPA guidance document Low-Flow (Minimal Drawdown) Ground Water Sampling Procedures (EPA, 1995). Each sample was analyzed for the site-specific COC list (VOCs by EPA Method 8260 and SVOCs by EPA Method 8270C).

Prior to sampling, the depth to water and the thickness or presence of NAPL was measured using an oil-water interface probe. Purging was accomplished in such a way as to minimize disturbance of sediments at the bottom of the well, and therefore minimize turbidity of the water samples. This was accomplished by purging at a low flow rate with the pump intake near the base of the screened interval, unless DNAPL was present. For wells with DNAPL, water samples were collected at least 5 to 10 feet above the top of the measured DNAPL. A peristaltic pump with dedicated tubing was used during the purging and sampling of each well. Since dedicated tubing was used in each well, no equipment rinse sample was collected.

Well purging was accomplished by purging at low-flow rates while monitoring the following field parameters: specific conductance, pH, temperature, dissolved oxygen, oxidation/reduction potential (redox), and turbidity. Meters were calibrated before sampling each day, using the manufacturer's

procedure. Odor and color of the purge water were also noted on the groundwater sampling record. Each monitoring well was purged until the field parameters pH, specific conductance, and temperature had stabilized, or until the well purged dry.

After purging, groundwater samples were collected from the discharge of the pump following low-flow sampling techniques. Sampling information (i.e., sample time, bottle sets, sampler name, use of filter, etc.) was recorded on the groundwater sampling forms. Groundwater samples were placed in coolers and delivered to ALS Laboratory Group and TestAmerica Laboratory in Houston, Texas for analysis. The samples were analyzed in accordance with EPA protocol for the analytical methods requested.

Data Quality

Samples collected from the Site in the recent investigations were analyzed in accordance with the guidelines of *EPA SW-846, Test Methods for Evaluating Solid Waste-Physical/Chemical Methods*. The procedures for laboratory analysis, with any modifications, are further documented in the laboratory standard operating procedures, which are maintained at the laboratory, and are listed in the laboratory's quality assurance plan. Data obtained from field and laboratory measurements were reviewed for conformance to project requirements, ensuring the lowest method quantitation limit (MQL) was used in the evaluation.

Analytical data from the critical soil and groundwater samples collected during the soil and groundwater investigations from 2011 through 2014 were reviewed for adherence to established QA/QC criteria, and Data Usability Summaries (DUSs) were prepared to demonstrate the quality of the laboratory analytical data and present any deviations from the established QA/QC criteria. Copies of the analytical data reports and details of the DUSs are provided in Appendix 1A-1 with this attachment. For the data included in Attachment 1A, the soil and groundwater data are considered usable for the purpose of evaluating COCs in the environmental media to assess the affected property based on the COCs and establish PCLE zones.

3.0 GROUNDWATER RESOURCE CLASSIFICATION

3.1 Groundwater Resource Classification

Groundwater classification of the A-TZ, B-TZ, B-CZ, C-TZ, and D-TZ wells was previously evaluated in the Revised APAR (ERM, 2004), the APAR Addendum (PBW, 2009), and the Updated APAR Addendum (PBW, 2010). In the Updated APAR Addendum (PBW, 2010), additional aquifer testing results were presented to address the hydraulic conductivity and well yields for three additional wells completed in the B-CZ to evaluate if the groundwater classification for the B-CZ would be considered Class 3 in accordance with the procedures outlined in the TCEQ TRRP Groundwater Classification Guidance Document TRRP-8 (TCEQ, 2010). According to the guidance, a groundwater-bearing unit is defined as a saturated geologic formation, group of formations, or part of a formation that has a hydraulic conductivity equal to or greater than 1×10^{-5} centimeters per second (cm/sec). Saturated zones with hydraulic conductivities values less than 1×10^{-5} cm/sec are considered to be non-groundwater bearing zones (or “saturated soils”). The difference between a Class 2 and Class 3 groundwater-bearing zone is that a Class 3 zone is incapable of yielding 150 gallons per day (gpd) from a properly completed well.

Based on the aquifer testing results conducted in 2010, as well as evaluating the aquifer testing conducted in 2009 (wells MW-33B, MW-35B, MW-49B, and MW-63B), the hydraulic conductivity estimated using the Bouwer-Rice analysis ranged from 6×10^{-8} cm/sec to 1×10^{-7} cm/sec for six of the seven wells completed in the B-CZ. Well MW-35B had a hydraulic conductivity estimate at 1×10^{-4} cm/sec. As discussed in the APAR Addendum (PBW, 2009), MW-35B is located near the lateral transitional boundary where the B-TZ pinches out and becomes the B-CZ.

Aquifer testing conducted on the B-CZ indicated that the B-CZ, with the exception of the area near MW-35B, would be classified as saturated soils as defined by the TCEQ east and northeast of MW-35B.

To further evaluate the hydraulic conductivity of the B-TZ and properly determine the groundwater classification of the unit, PBW conducted additional aquifer tests on other B-CZ wells:

- MW-15B
- MW-33BR
- MW-70B
- MW-74B
- MW-32B
- MW-68B
- MW-71B

Aquifer Testing

In March 2012, PBW conducted aquifer tests on the recently installed groundwater monitoring wells that were completed in the B-CZ clay unit. The objective of the testing was to evaluate the variability of the hydraulic conductivity of the cohesive unit and effects of the carbonate seams on the hydraulic conductivity of the B-CZ.

Each of the B-CZ wells that were tested fully penetrates the targeted carbonate seams in the B-CZ and is constructed with 2-inch PVC casing and screen. Monitoring well boring logs for the wells tested are provided in RAP Appendix 2. Below is a summary of the screened intervals for the B-CZ wells tested in 2012.

WELL NO.	Top Screen Interval (FT BGS)	Bottom Screen Interval (FT BGS)	Screen length (FT)	Intervals of Carbonaceous Gravels Seams (FT BGS)
MW-15B	28	38	10	28.8-37.4, 37.9
MW-32B	26	36	10	26.6, 29.0-29.2
MW-33BR	28	38	10	28.1, 31.8, 32.9
MW-68B	28	38	10	22.5, 24.0, 24.6, 32.4, 33.1, 36.3, 37.1, 37.7
MW-70B	25	35	10	26.8-27.2, 30.5, 32.2, 33.2
MW-71B	32	37	5	26.8, 28.4
MW-74B	26.5	36.5	10	36.3, 37.6, 38.0, 38.7

The wells listed above were designed so that the screened interval for the wells penetrated each of the carbonate gravel seams noted in the B-CZ soil boring logs. Except for one interval at MW-49B (27.5 ft bgs) and MW-63B (26-31 ft bgs), the wells were screened across each carbonate intervals observed and are considered fully penetrating for evaluating the hydraulic properties of the carbonate seams within the cohesive zone.

Slug tests were conducted on wells MW-32B and MW-70B using a solid slug for conducting slug in and slug out tests. The slug used for the tests displaced approximately 2.9 feet of water in a 2-inch well (1^{5/8}” diameter by 5 feet long). The other wells (MW-15B, MW-33BR, MW-68B, MW-71B, and MW-74B) were tested using constant discharge tests to evaluate well yield. These wells were pumped continuously at a discharge rate equivalent to 0.1 gallons per minute (gpm), or 150 gpd.

For the constant discharge tests, a peristaltic pump was used to pump water from the wells and water levels were measured using an electronic water-level meter to monitor drawdown. Flow was monitored during the test and the pump was adjusted to maintain a consistent pumping rate of 0.1 gpm. Pumping was stopped if the water level reached the pumping level or if drawdown stabilized. Measurements from the constant yield tests are provided in RAP Appendix 3 - Table 3.1, and graphs of drawdown are provided in RAP Appendix 3 - Figures 3B-1 through 3B-5.

Calculation of Hydraulic Conductivity

The slug test data were analyzed using AQTESOLV v4.0 software (HydroSOLVE, Inc.). Hydraulic conductivity (K) was calculated using the Bouwer – Rice solution for confined aquifers. The following items are provided in Appendix 3 of the RAP:

- Input parameters used in the slug test analysis are summarized in Appendix 3 - Table 3.2.
- Results are summarized in Appendix 3 - Table 3.3.
- Field measurements are provided in Appendix 3 - Attachment 3A and solutions for individual aquifer tests are provided in Appendix 3 - Attachment 3B.

For the analysis, the ratio of horizontal to vertical conductivity was assumed to be 10:1. Saturated thicknesses were estimated from boring logs for the C-TZ and D-TZ unit wells and from the cross-sections presented in Section 4. This differs from previous groundwater classification demonstrations for the Site, where the thickness of the calcareous nodule layer(s) in each well was instead used as the saturated thickness. This methodology was altered for the current demonstration to obtain results representative of the bulk properties of the water-bearing units, instead of isolating the calcareous nodule intervals. This change is consistent with the TCEQ Guidance document TRRP-8, which states, “small-scale stratigraphic variations, such as thin alternating fine-grained/coarse-grained sequences may exist within a given GWBU.” Because the calcareous nodule intervals are part of a larger GWBU, it is more appropriate to base the groundwater classification on the bulk hydraulic properties of the unit rather than attempting to isolate small scale variations within it. Regardless, the updated hydraulic conductivity results are similar to those previously submitted. For the slug tests conducted in the D-TZ well, a

saturated thickness of 35 feet was assumed.

To determine representative K values for the different GWBUs, test results were averaged in accordance with TCEQ Guidance document TRRP-8. As explained in the document, the representative hydraulic conductivity value for a single well is defined as the arithmetic mean of the individual slug test results from the well. The representative hydraulic conductivity value for a water-bearing unit is defined as the geometric mean of the inter-well results, as shown in the following equation:

$$\bar{K} = \sqrt[n]{K_1 \cdot K_2 \cdot \dots \cdot K_n}$$

where,

- \bar{K} = representative hydraulic conductivity for the water-bearing unit;
- K_n = inter-well hydraulic conductivity values; and
- n = the number of measurements.

Using the geometric mean approach, the average hydraulic conductivity value for the B-CZ water-bearing unit was calculated to be 1.1×10^{-7} cm/sec, which is nearly two orders of magnitude below the threshold for saturated soils classification. Conductivity values in the unit ranged from 1.1×10^{-6} cm/sec to 8.0×10^{-9} cm/sec. The average hydraulic conductivity of MW-35B is 1.6×10^{-4} cm/sec, which exceeds the threshold for saturated soil classification. Based on this finding, the area near MW-35B has been included in the B-TZ GWBU. Although the B-TZ sand unit is not present at MW-35B, the well is included in the B-TZ GWBU because of its significantly higher K value than the eastern B-CZ wells.

The well yield tests results summarized in Table 3.4 (RAP Appendix 3) are consistent with the results above and help better delineate the boundary between the B-TZ and B-CZ water-bearing units. Based on the constant yield test results, MW-15B, MW-68B, and MW-74B have also been included in the B-TZ GWBU because they may be capable of sustaining a yield of 150 GPD or more. The remaining wells that were tested (MW-33B, MW-33BR, MW-36B, MW-49B, MW-59B, MW-63B, MW-67B, and MW-71B) all had sustainable yields of considerably less than 150 GPD and were included in the B-CZ water-bearing unit.

Groundwater Classification Summary

Based on the hydraulic testing discussed above, the B-TZ unit, as delineated in Figure 3A, should remain classified as a Class 2 groundwater resource. Wells completed in the unit may have a sustainable yield of

more than 150 GPD, and K values in the unit are likely greater than 1×10^{-5} cm/sec. However, wells completed in the B-CZ unit have an average K value of 2×10^{-7} cm/sec, which is considerably less than the 1×10^{-5} cm/sec threshold for saturated soils. This finding, which is supported by the well yield test results, indicates B-CZ should be classified as saturated soils rather than a GWBU. The change from a Class 2 groundwater resource to saturated soils results from a lateral lithologic transition from the B-TZ to the B-CZ near well MW-35B. Classifying the B-CZ based on this transition is consistent with the TRRP-8 guidance document for groundwater classification, which states, “A GWBU is assigned the highest water-quality classification for which all of the citation’s applicable potential use and current use conditions are true. However, different classifications can apply to different portions of a single GWBU. For example, a GWBU can transition laterally from Class 2 to Class 3” (TCEQ, 2010).

As stated in the TCEQ Guidance (TRRP-8), “the applicable groundwater resource classification for a given hydraulically-interconnected GWBU will be determined based on consideration of the current use, water quality, and well yield of that GWBU only” (TCEQ, 2010). Therefore, the objective of evaluating the hydraulic properties of the B-CZ is to assess the hydraulic conductivity of the cohesive zone for determining the appropriate potential pathway for that individual hydrostratigraphic unit. The pathway of concern for exposure to the COCs in groundwater is human health groundwater ingestion ($^{GW}GW_{ing}$). The question to be addressed through the hydraulic testing is whether or not the B-CZ yields sufficient groundwater to be considered a groundwater-bearing unit. The aquifer testing discussed above indicates that the B-CZ unit exhibits a hydraulic conductivity that is too low to meet the criteria for a GWBU and should be classified as saturated soils.

Preferential Flowpaths within B-CZ

The TCEQ March 18, 2011 IOM for the Site references the layer(s) of calcareous nodules in the eastern half of the Site, stating “the layer of calcareous nodules: 1) appears to be continuous and ubiquitous on the eastern half of the subject site; 2) contains NAPL; 3) is significantly transmissive (based on its coarse-grained nature and presence of NAPL); and 4) possesses basal elevations that dip in at least two directions.” The IOM further states “The NAPL-containing layer of calcareous nodules (Item A.5) appears to be a shallow conduit for NAPL transport and from which NAPL recovery might be effective and rapid; this unit should be delineated separately in the dimensions for the purpose of determining the most advantageous location(s) for NAPL recovery.”

Based on the presence of NAPL within the calcareous unit, the carbonate seams do appear to have provided a preferential pathway for COCs and NAPL to migrate from the Site to the north. However, the

results from the slug, baildown, and constant yield tests indicate very low hydraulic conductivity and transmissivity, despite the test wells purposefully being screened across the calcareous nodule layers, where hydraulic conductivity within B-CZ is expected to be the highest. The hydraulic testing suggests NAPL recovery from the interbedded carbonate nodule layers within the B-CZ would not be effective. In addition, even though the carbonate gravel seems have allowed the migration of NAPL within the B-CZ off-site, continued migration does not appear likely because the source of the NAPL (tanks, spills from the former Process Areas) has been removed, and there is no longer a source of NAPL hydraulic head to force the migration of NAPL through the seams.

Pending review of the saturated soils for the B-CZ groundwater classification by the TCEQ, COCs detected in the B-CZ will be preliminarily compared to Class 2 groundwater PCLs as was done for the previous Updated APAR Addendum (PBW, 2010). Once the saturated soil for the B-CZ is approved, the Affected Property and PCLE Zone for the B-CZ will be revised accordingly.

4.0 SOIL PCLE ZONE ASSESSMENT

The current land use of the Site is commercial/industrial, and will likely remain commercial/industrial land use for the foreseeable future. The off-site adjacent properties consist of residential and commercial/industrial. Therefore, the critical PCL evaluation was conducted using the TCEQ Commercial/Industrial PCLs for both soil and groundwater pathways on site and Residential PCLs for pathways off site. Below is a discussion of the soil critical PCL development.

4.1 Soil Critical PCLs

The soil critical PCLs (cPCLs) were established for the Site by using the lower commercial/industrial PCLs for on-site soils and residential PCLs for off-site soils for the following pathways:

- $^{Tot}Soil_{Comb}$;
- $^{Air}Soil_{Inh-v}$ (Tier 1); and
- $^{GW}Soil_{Ing}$ (Tier 1 or 2).

The $^{Tot}Soil_{Comb}$ pathway was evaluated as potentially complete since although the Site is partially covered with crushed gravel and soil, potential future construction activities could occur at the Site. Most of the Englewood Intermodal Yard has a concrete pavement cover, and the rail area between the HWPW and the Englewood Intermodal Yard is covered with railroad ballast, which both prevents exposure to surface and subsurface soils in the area.

The same RALs and commercial/industrial cPCLs developed for the Updated APAR Addendum (PBW, 2010) were used for the additional data collected from the Site from 2011 through 2014. Details of the affected property and PCLE Zones for the COCs in soil are discussed in the following sections.

4.2 Surface and Subsurface PCLE Zones and NAPL in Soil

The recent soil data were incorporated with the previous soil data collected as part of the original APAR (ERM, 2000), Revised APAR (ERM, 2004), APAR Addendum (PBW, 2009), and Updated APAR Addendum (PBW, 2010). Additional surface and subsurface soils collected at the Site in 2013 and 2014 were sampled and analyzed for the list of 34 site-specific COCs (Updated APAR Addendum, PBW, 2010), with additional analyses (arsenic and lead for samples collected in February 2013, and total

petroleum hydrocarbons (TPH) by TX1005 Method, and arsenic and lead for samples collected in March 2013) conducted for soil samples collected in the Englewood Intermodal Yard. Through discussions with the TCEQ, site-specific COCs (i.e., benzo(a)pyrene, naphthalene, etc.) are better indicators of impacts to media at the Site than TPH concentrations (PBW, 2009), in which the TCEQ agreed in a meeting in 2009. Therefore, the Affected Property Assessment focused on the site-specific COCs, excluding TPH.

A summary of soil analytical data from 2013 and 2014 are presented on the following tables (provided in Appendix 2 of the RAP):

<u>Table</u>	<u>Description</u>
4-1	Summary of Surface Soil Sampling Results – Englewood Intermodal Yard
4-2	Summary of Subsurface Soil Sampling Results – Englewood Intermodal Yard
4-3	Summary of Surface Soil Sampling Results – North Perimeter along Liberty Road

Comparing the maximum surface and subsurface soil analytical data to the cPCLs for on-site and residential PCLs for off-site, concentrations of the following COCs exceeded their respective assessment levels in the surface and subsurface soils for samples collected in 2013 and 2014:

Surface Soils

- 2,4-Dinitrotoluene
- 2,6- Dinitrotoluene
- 2-Methylnaphthalene
- Benzo(a)anthracene
- Benzo(a)pyrene
- Dibenzofuran
- Naphthalene
- Lead
- Arsenic

Subsurface Soils

- Naphthalene

For comparison, the following COCs were detected above RALs in the soil samples collected from the Site during the previous investigations (figures referenced updated with 2013 and 2014 soil data).

Surface Soils

- 1,2-Diphenylhydrazine (Figure 4A-1)
- 2,4-Dinitrotoluene (Figure 4A-2)
- 2-Methylnaphthalene (Figure 4A-3)
- Benzene (Figure 4A-4)
- Benzo(a)anthracene (Figure 4A-5)
- Benzo(a)pyrene (Figure 4A-6)
- Dibenzofuran (Figure 4A-7)
- Fluoranthene (Figure 4A-8)

Subsurface Soils

- 2,4-Dimethylphenol (Figure 4B-1)
- 2-Methylnaphthalene (Figure 4B-2)
- Benzene (Figure 4B-3)
- Dibenzofuran (Figure 4B-5)
- Naphthalene (Figure 4B-6)
- Pentachlorophenol (Figure 4B-7)

Surface Soils

- Naphthalene (Figure 4A-9)
- Pentachlorophenol (Figure 4A-10)
- Phenanthrene (Figure 4A-11)

Subsurface Soils

The figures listed for each COC were updated with the 2013 and 2014 soil data to include surface soils from 0 to 15 feet and subsurface soils from 15 feet to the uppermost GWBU. Figures for surface soil concentrations of arsenic and lead (Figures 4A-12 and 4A-13, respectively) and subsurface soil for arsenic and lead (Figure 4B-8 and 4B-9, respectively) were prepared using the 2013 soil data. Concentrations shown on these figures are based on the highest concentration detected in the media (i.e., if multiple samples collected in the surface soils (0 to 15 feet bgs), the highest concentration was used for the Affected Property and PCLE Zone evaluation). Surface/subsurface soil cross sections (A-A' through H-H') were prepared showing the PCLE zones (Figures 4C-6 through 4C-12) for surface and subsurface soils. The Affected Property for the Surface Soils and Subsurface Soils are shown on Figures 4A and 4B, respectively. Based on the additional samples collected in 2013 and 2014, COCs in surface and subsurface soils were delineated on Site to the appropriate critical PCLs or RALs.

With the focus of the additional soil sampling conducted in 2013 within the Englewood Intermodal Yard and the sampling in 2014 along the northern perimeter of the Site along Liberty Street, extents of the COCs detected in surface and subsurface soils in that area are discussed below.

Surface Soils

The summary of surface soil data from samples collected in 2013 and 2014 is provided on Table 4-1 in RAP Appendix 2. Details of the results from the Englewood Intermodal Yard sampling in 2013 and the northern perimeter of the Site in 2014 are provided below.

Thirty-three soil borings were drilled and sampled in the Englewood Intermodal Yard during the 2013 investigation. Using those data, Figures 4A-1 through 4A-13 were updated to show the distribution of COCs in the surface soils. From those samples, the following COCs exceeded their respective RALs in at least one instance: 2,4-dinitrotoluene, 2,6-dinitrotoluene, benzo(a)anthracene, benzo(a)pyrene, dibenzofuran, naphthalene, arsenic, and lead:

- At two soil borings, IM-CPT-11 and IM-CPT-06, had RAL exceedances for 2,4-dinitrotoluene and 2,6-dinitrotoluene. IM-CPT-11(1.4-2.5) had concentrations of 2,4-dinitrotoluene at 0.0261 mg/kg (Figure 4A-2) and for 2,6-dinitrotoluene at 0.0219 mg/kg, both of which were greater than the RALs of 0.0218 mg/kg and 0.0179 mg/kg, respectively. IM-CPT-06 (13-15) had concentrations of 2,4-dinitrotoluene at 0.0234 mg/kg and for 2,6-

dinitrotoluene at 0.0234 mg/kg, both of which were just slightly greater than their respective RALs. No other exceedances of either 2,4-dinitrotoluene or 2,6-dinitrotoluene are observed.

- Eight surface soil samples had concentrations of benzo(a)anthracene greater than the RAL of 5.65 mg/kg, three of which exceeded the Commercial/Industrial PCL of 23.6 mg/kg mainly near the northern portion of the Englewood Intermodal Yard (Figure 4A-5). The highest exceedance, 87.2 mg/kg, occurred at SB-08(2.25-4.5). Benzo(a)anthracene concentrations are delineated to RALs along the perimeter of the Englewood Intermodal Yard.
- Of the 33 soil borings sampled in the Englewood Intermodal Yard area, 20 surface soil samples had concentrations of benzo(a)pyrene greater than the RAL of 0.56 mg/kg, of which 13 exceeded the Commercial/Industrial PCL of 2.36 mg/kg. The highest exceedance, 27.5 mg/kg, occurred at SB-08(2.25-4.5) (Figure 4A-6). The highest concentrations tend to be on the northern portion of the Englewood Intermodal Yard (area with concrete pavement) joining with the surface soil benzo(a)pyrene plume in the former Wood Preserving Works area. Benzo(a)pyrene concentrations are delineated to RALs in the Englewood Intermodal Yard area. There are three RAL exceedances along the eastern extent of the Site at locations IM-CPT-06, IM-CPT-07 and IM-CPT-18; however soil borings from the previous investigations (SB-126, SB-127, and SB-128) show concentrations less than RALs along the eastern perimeter of the Site (Figure 4A-6).
- One surface soil sample, SB-08(2.25-4.5), had a concentration of dibenzofuran of 372 mg/kg, greater than the RAL of 249 mg/kg. Soil boring SB-08 is located within the interior of the Site, where the cPCL (Commercial/Industrial PCL) is 744 mg/kg, which it does not exceed. Dibenzofuran concentrations are delineated to the RAL within the Englewood Intermodal Yard perimeter (Figure 4A-7).
- Three surface soil samples (SB-07(3-5), SB-08(2.25-4.5), and IM-CPT-21 (2.5-5)) had naphthalene concentrations greater than the RAL of 124 mg/kg. Two of these samples SB-08(2.25-4.5), and IM-CPT-21 (2.5-5) at 2,010 mg/kg and 226 mg/kg, respectively, exceeded the cPCL of 190 mg/kg, which is the commercial/industrial $^{Air}Soil_{Inh-V}$ PCL assuming a 30-acre source area.
- Arsenic concentrations were detected above the RAL (5.9 mg/kg) in 18 of the 33 soil samples collected from the Englewood Intermodal Yard. Of these 18 samples, arsenic concentrations ranged from 9.73 mg/kg (IM-CPT-10 (2-5 ft)) to 60.5 mg/kg (SB-04 (3.5-5ft)). None of the arsenic concentrations exceeded the commercial/industrial $^{Tot}Soil_{Comb}$ of 200 mg/kg. All of the soil borings where the arsenic exceeded the RAL is covered with concrete pavement.
- Lead concentrations were detected greater than the RAL Tier 2 PCL of 275 mg/kg (TCEQ, 2001) assuming pH>5 and 30-acre source area. Of the 33 samples from the Englewood Intermodal Yard, 18 samples had lead concentrations greater than the RAL. Eight surface soil samples had lead concentrations greater than the commercial/industrial $^{Tot}Soil_{Comb}$ of 1,600 mg/kg with maximum concentrations at 5,460 mg/kg (IM-CPT-16 (1.9-5 ft)). As with the arsenic PCLE Zone, the soil borings where the lead exceeded the $^{Tot}Soil_{Comb}$ PCL is covered with concrete pavement.

For the northern perimeter of the Site near SWMU 8 (Aboveground Storage Tank Area), Figure 4A-14

shows COCs that exceed RALs and cPCLs within and along the northeast corner of the Site. The figure was updated with analytical data from soil borings SB-148 through SB-155 that were collected along the area where a Centerpoint Energy natural gas line was leaking in May 2014. Soil samples were collected from the top foot of surface soils. Of the 34 site-specific COCs analyzed in these soil samples, six of the locations (SB-150 through SB-155) had the benzo(a)pyrene and pentachlorophenol concentrations detected above their respective RALs, as discussed below:

- Benzo(a)pyrene concentrations exceeded the RAL of 0.54 mg/kg in six of the eight soil borings sampled along the northern perimeter, with three samples SB-153, SB-154, and SB-155 with concentrations greater than commercial/industrial PCL of 2.36 mg/kg at 3.31 mg/kg, 3.16 mg/kg, and 5.14 mg/kg, respectively.
- Pentachlorophenol concentrations exceeded the RAL of 0.12 mg/kg in two of the soil samples SB-153 and SB-154 at 0.856 mg/kg and 0.561 mg/kg, respectively. Pentachlorophenol concentrations were not detected in the other six samples, but the sample detection limit was elevated above the RAL in those samples due to dilution of the sample.

The surface soil Affected Property extends to the south edge of Liberty Road between SB-121 to SB-125 as shown on Figure 4A-14. These additional soil samples confirm the presence of the Affected Property extending to Liberty Road. Surface soil COCs had been previously delineated to RALs along the north side of Liberty Road across from SWMU Nos. 6, 7, 8, 10 and 11 (PBW, 2010). One surface soil sample, SB-60(0-0.5ft) had a benzo(a)pyrene detection at 0.733 mg/kg above the RAL of 0.54 mg/kg; however, the detection is likely from historical asphaltting of Liberty Road and not from activities at the Site (PBW, 2010). This conclusion is further supported by the seven surface soil samples collected along the north side of Liberty Road (SB-138 through SB-142, SB-59, and SB-61) where the detections of COCs were less than RALs.

Based on the conceptual site model that the on-site surface soils were impacted from spills and releases from operations at the Site (PBW, 2009), surface soil impacts would not be likely have migrated across Liberty Road as supported by the soil data discussed above. Therefore, the surface soil Affected Property and PCLE Zone in this area is defined by the southern edge of Liberty Road (Figure 4A-14).

The surface soil PCLE zone extends across the Original Process Area (SWMU 5) and Recent Process Area (SWMU 4), down the SDD (SWMU 2), and across the Former Inactive Wastewater Lagoon (AOC 6) (Figure 4A). The PCLE zone includes the COCs listed above, with benzo(a)anthracene (Figure 4A-5), benzo(a)pyrene (Figure 4A-6), naphthalene (Figure 4A-9), and pentachlorophenol (Figure 4A-10) being the primary COCs defining the surface soil PCLE zone. Additional soil sampling conducted in 2014 indicates that surface soil COCs (benzo(a)pyrene and pentachlorophenol) extend beyond the fence to the

edge of Liberty Road, but are delineated along the northeast side of the Site (Figure 4A-12).

Subsurface Soils

Of the 33 soil borings drilled in 2013 in the Englewood Intermodal Yard, eight samples were collected and analyzed for site-specific COCs to evaluate lateral delineation of the COCs in subsurface soils (>15 feet bgs). Analytical data of the subsurface soils are summarized on Table 4-2 in RAP Appendix 2, and presented on (Figures 4B-1 through 4B-8). Of the eight subsurface soil samples collected in the Englewood Intermodal Yard, naphthalene and arsenic were the only COCs detected at concentrations exceeding RALs. Naphthalene was detected at IM-CPT-14 (15-16.4) at 168 mg/kg (Figure 4B-6), above the RAL of 137 mg/kg, but less than the on-site cPCL of 192 mg/kg. Arsenic was detected at IM-CPT-01 (17.5-20ft) at 6.72 mg/kg, at IM-CPT-08 (15-16 ft) at 7.88 mg/kg, and at IM-CPT-12 (15-15.9ft) at 10.7 mg/kg. In all three cases, the shallower sample from IM-CPT-01 (10-12.5ft), IM-CPT08 (5-7.5 ft), and IM-CPT-12 (5-7.5ft) had arsenic concentrations well below 5.9 mg/kg at 2.12 mg/kg, 1.66 mg/kg, and 1.09 mg/kg, respectively, indicating likely naturally occurring arsenic concentrations at depth. Benzene concentrations were detected at the RAL of 0.105 mg/kg at IM-CPT-16 (15-17.5), but did not exceed the RAL (Figure 4B-3). None of the lead concentrations were detected above the RAL, with the highest concentration at 21.5 mg/kg.

4.3 NAPL Evaluation

Since 1995, site investigations have included activities to evaluate surface and subsurface soils for the presence of NAPL. Specifically, CPT/ROST investigations were conducted in 1995, 2001, and 2008 at the Site using laser-induced fluorescence (LIF) as a tool to evaluate the presence of NAPL. In 2013 as part of the investigation of the Englewood Intermodal Yard, CPT/ROST borings were conducted to evaluate potential NAPL in the vadose zone and water-bearing zones. A total of 99 CPT/ROST locations have been drilled at and around the Site (Figure 1A). CPT/ROST borings that intersect the geologic cross section lines are posted on Figures 4C-1 through 4C-5.

ROST/LIF method is used as qualitative screening data to estimate the approximate *in situ* distribution of petroleum hydrocarbon NAPL based on the fluorescence response induced in the PAH compounds, which are commonly found in creosote. ROST/LIF results do not conclusively indicate NAPL is present at a location given the qualitative nature of the screening tool. However, NAPL has been detected in soil borings drilled at the Site in areas where elevated ROST responses were observed, and also NAPL has been detected in monitoring wells completed in the A-TZ, B-TZ, B-CZ, and C-TZ zones where elevated ROST responses were also observed.

As was presented in the Updated APAR Addendum (PBW, 2010), the vadose zone (ground surface to the top of the A-TZ (generally between 15 and 20 feet bgs)) was evaluated using ROST data and soil boring logs at the Site to identify potential areas where NAPL may be present. To evaluate areas of elevated ROST readings (units of fluorescence percent response (%RE)) in the vadose zone, ROST readings in the CPT borings greater than 25% RE were contoured, as shown on Figure 4D. This figure was updated for this report using the ROST data collected from the Englewood Intermodal Yard in 2013.

It's important to note that ROST readings greater than 25% RE do not necessarily indicate presence of NAPL; however, some soil borings located near CPT/ROST borings with ROST readings greater than 25% RE generally had some NAPL or staining observed in that soil boring. In addition to the contoured ROST readings in the vadose zone, soil borings where NAPL was documented on the boring logs in the vadose zone are highlighted on Figure 4D. The ROST readings and NAPL observations in soil borings are also presented on the surface/subsurface cross sections (Figure 4C-6 through 4C-12).

Most of the areas with elevated ROST/LIF readings have been observed around the former process areas (SWMUs 4 and 5), and around the AST Area (SWMU 8) (Figure 4D). The highest ROST readings were located near SWMU 8, where creosote and drying agents were stored. A more detailed discussion of NAPL occurrence in the groundwater-bearing zones is provided in Section 5.2.

5.0 GROUNDWATER PCLE ZONE ASSESSMENT

The land use for the Site is and will likely remain commercial/industrial for the foreseeable future. However, with residential properties around the Site and apparent groundwater impacts above PCLs off-site, the critical PCL evaluation was conducted using the more conservative TCEQ Residential PCLs for groundwater pathways off-site and commercial/industrial pathways on site. Response actions will be designed to address PCLE zones based on land use (i.e., commercial/industrial PCLs for on-site PCLE zone). A discussion of the groundwater PCLE Zones is presented below.

5.1 Groundwater PCLE Zones

Groundwater analytical data were compared to the TCEQ TRRP Residential Groundwater PCLs, dated March 2010, assuming the source area greater than 0.5 acre in size (30-acre source area). Critical PCLs were established as the lesser value between residential and commercial/industrial $^{GW}GW_{Ing}$ and $^{Air}GW_{Inh}$ PCLs. The groundwater Affected Property and PCLE Zones were updated based on groundwater COC results using the July-August 2014 site-wide groundwater analytical data. However, semi-annual groundwater monitoring data from January 2010 through July/August 2014 were used to evaluate groundwater trends and evaluate plume stability.

Groundwater samples were collected from monitoring wells installed in the four units of the uppermost GWBUs at the Site. Locations of monitoring wells are presented on Figure 5A. Laboratory data packages for the data collected in July/August 2014, as well as data from 2011, 2012, 2013, and January 2014 are provided in Appendix 2 of the RAP. A complete summary of groundwater analytical data for the Site from 2010 through 2014 is presented on the following tables (RAP Appendix 2):

<u>Table</u>	<u>Description</u>
5B-1	Summary of Groundwater Sampling Results – A-TZ
5B-2	Summary of Groundwater Sampling Results – B-TZ and B-CZ
5B-3	Summary of Groundwater Sampling Results – C-TZ
5B-4	Summary of Groundwater Sampling Results – D-TZ

COCs evaluated for the purpose of the APAR were site-specific COCs identified in the RFI Work Plan (IC, 1994) prepared for the Site. In addition to the 34 site-specific COCs, selected wells were analyzed for vinyl chloride by EPA Method 8260 based on groundwater sampling in 2010. Comparing the maximum groundwater analytical data from the July/August 2014 groundwater sampling event to cPCLs, concentrations of 23 target COCs exceeded their respective RALs or had a SDL greater than the cPCL

(>SDL) for COCs with no detections:

VOCs

- Benzene (A-TZ, B-TZ, C-TZ)
- Ethylbenzene (B-CZ only)
- Methylene Chloride (A-TZ, B-TZ/B-CZ, & C-TZ)
- Toluene (B-CZ only)
- Vinyl Chloride (A-TZ and B-TZ)

SVOCs

- 2,4-Dimethylphenol (A-TZ, B-TZ, C-TZ)
- 2,6-Dinitrotoluene (B-TZ & C-TZ)
- 2-Methylnaphthalene (A-TZ, B-CZ/B-TZ, & C-TZ)
- Acenaphthene (C-TZ only, one well*)
- Anthracene (C-TZ only, one well*)
- Benzo(a)anthracene (A-TZ, B-CZ, & C-TZ)
- Benzo(a)pyrene (A-TZ, C-TZ, and D-TZ)
- Bis(2-chloroethoxy)methane (A-TZ & C-TZ*)
- Chlorobenzene (A-TZ only, one well)
- Chrysene (C-TZ only, one well*)
- Dibenzofuran (A-TZ, B-CZ/B-TZ, & C-TZ)
- Fluoranthene (C-TZ only, one well*)
- Fluorene (C-TZ only, one well*)
- Naphthalene (A-TZ, B-CZ/B-TZ, & C-TZ)
- Pentachlorophenol (C-TZ)
- Phenanthrene (C-TZ only, one well*)
- Phenol (A-TZ, B-CZ, & C-TZ)
- Pyrene (C-TZ only, one well*)

* - COC only detected in wells with DNAPL present

As noted above, SVOCs acenaphthalene, anthracene, chrysene, fluoranthene, fluorene, phenanthrene, and pyrene concentrations were detected above cPCLs in only one well, MW-23C, which contained DNAPL during the sampling event. Therefore, these concentrations may overestimate the dissolved fraction in the groundwater. As an example, naphthalene concentrations were detected in MW-23C at 57.9 mg/L, which is above the solubility of naphthalene in water at 41 mg/L.

PBW evaluated the groundwater flow conditions at the Site based on multiple fluid measurements collected since 2004, with the potentiometric surface relatively consistent in the transmissive zones over that time period. Groundwater data collected from the July 2014 gauging event are consistent with data collected previously at the Site, and with the additional wells installed in units A-TZ, B-CZ, and C-TZ in May 2014. Potentiometric surface maps from the July 2014 sampling event for each of the four transmissive zones, A-TZ, B-TZ, C-TZ, and D-TZ, are presented on Figures 5A-1 through and 5A-4, respectively.

The NAPL distribution at the Site based on DNAPL measurements from monitoring wells completed in

the A-TZ, B-TZ/B-CZ, and C-TZ units are presented for July 2014 on Figures 5A-5 through 5A-7, respectively. Table 5D in RAP Appendix 2 provides a summary of the fluid-level measurements for the wells.

The spatial distributions of the COCs exceeding RALs in each GWBU from the July/August 2014 monitoring events are presented on the following figures:

- Figure 5B-1 for unit A-TZ,
- Figure 5B-2 for B-TZ/B-CZ,
- Figure 5B-3 for C-TZ, and
- Figure 5B-4 for D-TZ.

In addition to the figures listed above, individual COC concentration maps for the most common groundwater COCs at the Site (benzene, 2,4-dimethylphenol, 2-methylnaphthalene, dibenzofuran, and naphthalene) were prepared for the three zones at the Site using the July/August 2014 groundwater data:

- A-TZ - Figures 5B-5 through 5B-9,
- B-CZ/B-TZ - Figures 5B-10 through 5B-14, and
- C-TZ - Figures 5B-15 through 5B-19.

Details of the potentiometric surface, distribution of the COCs, and the occurrence of NAPL for each transmissive zone are discussed below.

Section 5.1.1 Groundwater Flow Conditions and COC Distribution – Transmissive Zone A-TZ

Groundwater in the A-TZ generally flows from west to east across the Site at a gradient ranging from approximately 0.0009 ft/ft to 0.011 ft/ft (approximate average of 0.006 ft/ft), with a groundwater divide on the east side of the Site just west of the Lockwood Road Bridge (Figure 5A-1). As discussed in the Updated APAR Addendum (PBW, 2010), the 60-in wastewater line runs north to south just west of the Lockwood Bridge and appears to intersect the A-TZ (see Cross Section A-A', B-B', and C-C', Figure 4C-1). Groundwater flow in the A-TZ flows to the east on the west side of the wastewater line, and flows to the west on the east side of the wastewater line. The highest groundwater elevation in the A-TZ during the July 2014 event was near the west side of the Site at SWMU 1 (42.85 feet relative to the City of Houston Vertical Datum (HVD) (MW-22A, July 2014)), with the lowest elevations near the east side of the Site along Lockwood Drive (33.43 feet HVD (MW-18A, July 2010)) near the area where the wastewater line is located. Although these groundwater flow directions suggest potential discharge to the

wastewater line, as discussed in the Updated APAR Addendum (PBW, 2010), fluid samples collected from the sanitary sewer line suggested there is not a significant loading of COCs from groundwater into the wastewater line. There also appears to be a groundwater high in the A-TZ in the Englewood Intermodal Yard at MW-77A (42.43 feet HVD). However, the well has only been gauged once since installed in May 2014.

VOCs – A-TZ

During the July/August 2014 groundwater monitoring event, benzene concentrations were detected above the RAL of 0.005 mg/L in A-TZ wells located predominantly on the eastern portion of the Site near SWMUs 4, 5, and 8 (Figures 5B-1 and 5B-5). The maximum benzene concentration detected in the A-TZ wells in July/August 2014 was 0.576 mg/L at on-site well MW-17. The highest off-site benzene concentration detected was at MW-32AR at 0.0404 mg/L. Benzene concentrations are delineated to the RAL (0.005 mg/L) off-site to the north at MW-33A (0.00236 mg/L), and to the east at MW-44A (0.0042 mg/L), MW-25A (<0.00008U mg/L), MW-59A (<0.00008U mg/L), MW-60A (<0.00008U mg/L), and MW-61A (<0.00008U mg/L). Benzene concentrations are also delineated to the RAL to the south at MW-69A (<0.00008U mg/L), MW-50A (<0.00008U mg/L), and MW-77A (<0.00008U mg/L), and to the west at MW-15A (0.00161 mg/L). As previously discussed, the groundwater gradient is to the east-northeast in the A-TZ up to near the Lockwood Street bridge.

Other VOC compounds detected in the groundwater samples from A-TZ wells above their respective RALs included four PCL exceedances for methylene chloride (RAL: 0.005 mg/L) at MW-17 (0.0187J mg/L), MW-18A (0.0138J mg/L), MW-49A (0.0212 mg/L), and MW-55A (0.0179J mg/L), all from possible laboratory contaminant; and two PCL exceedances for vinyl chloride (RAL: 0.002 mg/L) at MW-18A (0.02J mg/L) and MW-58A (0.0101J mg/L). The horizontal distribution of VOCs has been delineated to RALs based on the monitoring points located in all directions around the area with detections of VOCs less than RALs or sample quantitation limits (SQLs) at downgradient, cross-gradient, and up-gradient well locations.

SVOCs – A-TZ

Similar to the VOC detections, SVOCs were detected above the applicable RALs in A-TZ wells located generally on the eastern portion of the Site near SWMU Nos. 4, 5, and 8; and one A-TZ well located on the western portion of the Site (MW-22A) (Figures 5B-1 and 5B- through 5B-9). The predominant SVOCs detected in the A-TZ above RALs include 2,4-dimethylphenol, 2-methylnaphthalene,

dibenzofuran, and naphthalene. The highest concentrations for 2,4-dimethylphenol (Figure 5B-6) and naphthalene (Figure 5B-9) were detected at MW-17. The highest concentrations for 2-methylnaphthalene and dibenzofuran were detected at MW-78A in the Englewood Intermodal Yard. Naphthalene concentrations were detected in MW-22A during the July/August 2014 sampling event at concentrations above the RAL(0.49 mg/L) at 0.792 mg/L for the first time in this well. Monitoring well MW-22A has been sampled numerous times since 2000, with the previous highest naphthalene concentration at 0.0035 mg/L in January 2011 (Table 5B-1). No other A-TZ monitoring wells in the area have naphthalene concentrations near the RAL. In addition, the groundwater gradient during the latest gauging event showed groundwater flow from west to east, indicating that MW-22A was upgradient of the Site. PBW attempted to collect a resample from MW-22A in August 2014, but the well surface completion was damaged and the well casing was compromised. Therefore, a replacement well will be installed and sampled to confirm the detection.

Other SVOCs, including benz(a)anthracene, benzo(a)pyrene, bis(2-chloroethoxy)methane, chlorobenzene, and phenol were also detected at concentrations greater than RALs. Benzo(a)pyrene and bis(2-chloroethoxy)methane were detected in only one sample above RALs, in the MW-57A sample collected during the July/August 2014 sampling event. These concentrations may be influenced by the presence of DNAPL in the well (see Section 5.2).

Except for naphthalene in MW-22A, the horizontal distribution of SVOCs in the A-TZ GWBU has been delineated to RALs based on the monitoring points located in all directions around the area with detections of SVOCs less than RALs or not detected above SQLs. Further evaluation for naphthalene in the area of MW-22A will be conducted.

Groundwater Plume Stability – A-TZ

For the A-TZ groundwater Affected Property, the configuration of the groundwater plume based on the data collected from 2011 through 2014 has been stable or shrinking (concentrations in MW-12A decreasing below cPCLs) as shown on Figure 5B-20. Using primary lines of evidence (PLOE), groundwater data from the A-TZ wells suggests the plume is not migrating and COC concentrations are predominantly limited to the on-site property except for areas near wells MW-32AR and MW-33A and along the east portion of the Site at wells MW-18A and MW-49A. Unit A-TZ groundwater flow conditions near the wastewater utility on the east side of the Site likely controls the migration of COCs in the A-TZ downgradient to the southeast; however, as discussed in Section 3.0, there does not appear to be significant mass loading of COCs into the wastewater line.

Section 5.1.2 Groundwater Flow Conditions and COC Distribution – Transmissive Zone B-TZ/B-CZ

Groundwater in the B-TZ/B-CZ generally flows from west to east-northeast across the Site at gradients ranging from 0.005 ft/ft to 0.011 ft/ft, with an average of approximately 0.008 ft/ft (Figure 5A-2). As shown on Figure 5A-2, there is a piezometric high near the west perimeter of the Site, similar to the A-TZ. The highest groundwater elevation in the B-TZ in July 2014 was 43.15 feet HVD (MW-42B), and lowest elevation in the B-TZ wells was 37.22 feet HVD (MW-68B). The highest groundwater elevation in the B-CZ in July 2014 was 40.46 feet HVD (MW-36B), and the lowest elevation in the B-CZ wells was 32.71 feet HVD (MW-67B).

As discussed in Section 3.0, there is a lateral change in the hydrogeology of the B-TZ as it pinches out into the B-CZ clay unit, where groundwater is encountered in very thin carbonate seams (typically less than 0.1 feet thick) within the clay unit at relatively the same elevation as the B-TZ. Groundwater flow in the B-CZ during the July 2014 gauging event shows flow to the east-northeast on the east portion of the Site, with groundwater potentiometric elevations from the off-site wells north of the Site (i.e., MW-36B and MW-59B) indicating flow to the north toward MW-67B. There is also a groundwater elevation high near MW-36B showing flow to the west southwest (Figure 5A-2).

As detailed in the Updated APAR Addendum (PBW, 2010) and discussed in Section 3.1, the B-CZ yields less than 0.1 gpm and the hydraulic conductivity ranged from 8×10^{-9} cm/sec to 1.1×10^{-6} cm/sec for the wells completed in the B-CZ. Monitoring wells MW-35B and MW-68B appear to be installed in the area of the lateral transitional boundary where the B-TZ pinches out into the B-CZ with some hydraulic connection between the more transmissive sands to the southwest and the carbonate seams encountered in MW-35B. For the purposes of evaluating the Affected Property, COCs detected in groundwater encountered in the B-CZ were conservatively evaluated to Class 2 groundwater PCLs, as discussed below. However, the response action objectives for the B-CZ may be revised pending TCEQ review of the additional aquifer testing for the B-CZ (Section 3.0).

Based on the potentiometric elevations within the A-TZ and B-TZ, there appears to be communication between the two GWBUs on the west side of the Site as shown with the relatively similar groundwater elevations shown for the two units on Figures 5A-1 and 5A-2 for the A-TZ wells and the B-TZ/B-CZ wells.

VOCs – B-TZ/B-CZ

Benzene was detected above the RAL in the B-TZ on the west side of the Site at only one monitoring well, MW-40B, at 0.0103 mg/L in July/August 2014, with no detections above the SDL (<0.0005 mg/L) at any B-TZ monitoring points located downgradient from this area (i.e., MW-14, MW-39B, and MW-38B) (Figure 5B-10). With benzene concentrations less than the PCL in on-site monitoring wells MW-14, MW-39B, P-11, and off-site well MW-38B, benzene concentrations are delineated on-site on the west side of the Site to the RAL in the B-TZ. Monitoring wells that fall within the B-TZ to B-CZ transition zone include wells MW-35B, MW-68B, MW-74B, MW-75B, and MW-80B. Benzene concentrations greater than the RAL in these transition zone wells range from 0.0539 mg/L (MW-35B) to 2.18 mg/L (MW-68B). No other VOCs were detected in Unit B-TZ monitoring wells at concentrations exceeding the applicable RALs.

The B-CZ, where monitoring wells MW-32B, MW-33BR, MW-36B, MW-49B, MW-55B, MW-57B, MW-59B, MW-63B, MW-67B, MW-70B and MW-71B are completed across the carbonate seams within the B-CZ, does not yield a sufficient quantity of groundwater to be considered a current or future usable water resource. However as previously discussed, COC concentrations detected in groundwater samples from these wells were preliminarily compared to Class 2 groundwater PCLs to conservatively evaluate the Affected Property. Using the Class 2 Tier 1 PCLs, benzene was detected above the RAL in the six B-CZ wells MW-33BR, MW-49B, MW-55B, MW-57B, MW-63B, and MW-70B during the July/August 2014 monitoring event ranging from 0.108 mg/L (MW-63B) to 2.55 mg/L (MW-70B, where DNAPL was encountered (Figure 5B-10)). The highest concentrations were detected in the off-site wells. The benzene concentrations are delineated to the RAL in the B-CZ to the north at MW-67B (0.00008U mg/L); to the east at MW-71B (0.00155 mg/L), MW-36B (0.00008U mg/L), and MW-59B (0.00008U mg/L); to the south at MW-80B (0.0000898J mg/L) and MW-81B (0.00008U mg/L); and west in the B-TZ as previously discussed. Well MW-32B was not sampled in July/August 2014.

Other VOCs detected above RALs in the B-TZ or B-CZ included ethylbenzene (MW-70B at 0.742 mg/L), methylene chloride (MW-49B at 0.0212 mg/L and MW-55B at 0.0155J mg/L), toluene (MW-57B at 1.33 mg/L and MW-70B at 2.76 mg/L), and vinyl chloride (MW-57B at 0.00299J mg/L and MW-68B at 0.007J mg/L). However, each of these VOCs is delineated to less than RALs at the Site (Figure 5B-2).

SVOCs – B-TZ/B-CZ

SVOCs exceeding the applicable RALs in the B-TZ were detected at MW-40B on the west side of the Site. SVOCs detected above RALs consisted of 2-methylnaphthalene, dibenzofuran, and naphthalene

(Figures 5B-12, 5B-13, and 5B-14, respectively). SVOCs were not detected above RALs at any of the monitoring wells located downgradient of MW-40B during the July/August 2014 event (Figures 5B-2), demonstrating delineation to the RALs in this portion of the B-TZ. The general absence of COCs in monitoring wells MW-38B and MW-39B located downgradient of MW-12B and MW-41B, which contain DNAPL and were not sampled in July/August 2014, show that COCs in groundwater attenuate below RALs over a short distance (<100 feet). Well TW-41B, located within 50 feet of MW-41B, had no COCs detected at concentrations greater than RALs (Figure 5B-2).

The only other well in the B-TZ to have a RAL exceedance was at MW-22B on the far west end of the Site. Similar to the A-TZ well MW-22A, naphthalene concentrations from the July/August 2014 sampling event were detected above the RAL (0.49 mg/L) at MW-22B at 0.832 mg/L. A resample was collected on August 28, 2014 with a naphthalene concentration of 0.977 mg/L. The well pad was noted as damaged in August; however, the well casing appeared to be uncompromised. As with MW-22A, naphthalene concentrations had been below the RAL in this well since 2000. However, from February 2012 through January 2014, naphthalene concentrations showed an increase from 0.0032 mg/L to 0.13J mg/L (RAP Appendix 2 Table 5B-2). No samples were collected from MW-22B in 2013 because the well (and MW-22A) was covered with soil placed there by the City of Houston (well is located in the City of Houston right of way (ROW) but within the UPRR property). With the well pad damaged, UPRR proposes to re-install well MW-22B to the same construction specifications in the same area (keep within the UPRR property but out of the City ROW). Monitoring wells upgradient of MW-22B (MW-10B, MW-11B, and P-10 (Figure 5A-2) located about 200 feet east) have not had naphthalene concentrations above the RAL since September 2002 (MW-11B at 0.7 mg/L). The highest concentration detected in these upgradient wells was at P-10 at 5.8 mg/L in March 1998. Since January 2009, naphthalene concentrations in P-10 have not been detected above SDLs. It is uncertain if the naphthalene detections in MW-22B, as well as MW-22A, are from migration in the B-TZ, or as a result of the well casings being compromised. After the replacement wells have been installed, UPRR will assess if additional downgradient wells are needed to delineate the naphthalene concentrations in the B-TZ.

SVOC 2,6-dinitrotoluene concentrations were detected in MW-14 at a concentration of 0.0788 mg/L above the RAL of 0.0013 mg/L. Over the entire Site, 2,6-dinitrotoluene concentrations were only detected above either the SDL or RAL in MW-14 and MW-12C during the July/August 2014 sampling event. No other concentrations above the SDL were detected. 2,4-Dinitrotoluene concentrations have never been detected in MW-14 dating back to 1997. Both of these wells have no other COC detected at concentrations above the respective RALs. In addition, 2,6-dinitrotoluene is sold as an explosive and is a

typically released from facilities that manufacture or process dinitrotoluene, which was neither processed nor handled at the Site. Therefore, the detection in July/August 2014 may be from a laboratory bias and will be confirmed during the next scheduled sampling event.

For the B-TZ-B-CZ transition zone wells, 2-methylnaphthalene (Figure 5B-12), dibenzofuran (Figure 5B-13), and naphthalene (Figure 5B-14) concentrations exceeded their respective RALs. However, the highest concentrations of these COCs were detected further east in the B-CZ wells.

On the northeastern portion of the Site in the B-CZ wells where the B-TZ is absent, 2,4-dimethylphenol (Figure 5B-11), 2-methylnaphthalene (Figure 5B-12), dibenzofuran (Figure 5B-13), and naphthalene (Figure 5B-14) concentrations exceeded their respective RALs during the July/August 2014 sampling event. The highest concentrations for these COCs were typically detected at MW-57B (well historically has DNAPL), MW-70B (DNAPL measured in the well) and MW-74B. These four COCs are delineated to RALs in the B-CZ as discussed below:

- 2,4-Dimethylphenol (Figure 5B-11) – Concentrations of 2,4-dimethylphenol were less than the RAL (0.49 mg/L) in downgradient wells to the north in MW-33BR (0.000301U mg/L) and MW-63B (0.0031U mg/L); to the east in MW-59B (0.000307U mg/L); to the south in MW-80B (0.00031U mg/L) and MW-81B (0.000301U mg/L); and to the west (upgradient) in MW-15B (0.000292U mg/L).
- 2-Methylnaphthalene (Figure 5B-12) – Concentrations of 2-methylnaphthalene were less than the RAL (0.098 mg/L) in downgradient wells to the north in MW-63B (0.0302 mg/L) and MW-67B (0.0000673U mg/L); to the east in MW-59B (0.0000693U mg/L), to the south in MW-80B (0.000158J mg/L) and MW-81B (0.000068U mg/L); and to the west (upgradient) in MW-15B (0.00622 mg/L).
- Dibenzofuran (Figure 5B-13) - Concentrations of dibenzofuran were less than the RAL (0.098 mg/L) in downgradient wells to the north in MW-33BR (0.0868 mg/L), MW-63B (0.00663 mg/L), and MW-67B (0.0000769U mg/L); to the east in MW-59B (0.000201J mg/L), to the south in MW-80B (0.00008U mg/L) and MW-81B (0.0000777U mg/L); and to the west (upgradient) in MW-15B (0.0272 mg/L).
- Naphthalene (Figure 5B-14) - Concentrations of naphthalene were less than the RAL (0.49 mg/L) in the downgradient well to the north in MW-67B (0.000275U mg/L); to the east in MW-59B (0.00627 mg/L), to the south in MW-80B (0.00157 mg/L) and MW-81B (0.0000777U mg/L); and to the west (upgradient) in MW-15B (0.452 mg/L).

Other SVOCs detected in the B-CZ wells above RALs included benzo(a)anthracene and phenol.

Benzo(a)anthracene concentrations were detected above the RAL (0.0013 mg/L) in only MW-75B at 0.00748J mg/L. Phenol concentrations detected above the RAL (7.3 mg/L) were detected at MW-55B (127 mg/L) and MW-74B (53.3 mg/L), both in the middle of the groundwater PCLE Zone for the B-CZ unit.

Using the July 2014 groundwater data, SVOCs are shown to be delineated to RALs within the B-CZ.

Groundwater Plume Stability – B-TZ/B-CZ

The groundwater Affected Property in the B-TZ and the B-CZ appears to be stable based on the groundwater data collected from 2011 through 2014. The groundwater PCLE Zone in the B-TZ on the west side of the Site is stable and limited in extent laterally (Figure 5B-21). UPRR will continue to evaluate the naphthalene concentrations at MW-22B. For the B-CZ, the PLOE indicates that the PCLE Zone appears to be stable with some minor fluctuations over time.

Section 5.1.3 Groundwater Flow Conditions and COC Distribution – Transmissive Zone C-TZ

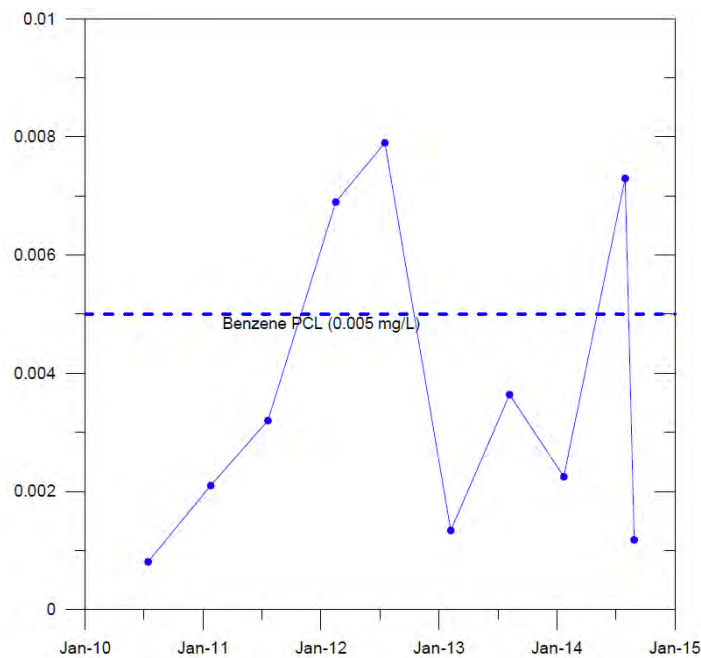

During the July 2014 event, the groundwater gradient in the C-TZ is from northeast to southwest across the Site (Figure 5A-3) at a gradient about 0.001 ft/ft. The flow direction is similar to previous gauging events. Groundwater elevations measured in July 2014 ranged from a high of approximately 28.12 feet HVD (MW-53C) to 24.44 feet HVD (MW-21C). There are two areas showing relatively low potentiometric elevations, near MW-23C and in the vicinity of MW-25C, MW-45C, and MW-46C. Both areas have potentiometric elevations about 2 to 3 feet lower than the surrounding potentiometric elevations (Figure 5A-3).

VOCs – C-TZ

Of the VOCs analyzed during the July/August 2014 groundwater monitoring event, benzene and methylene chloride were the only VOCs detected above their respective RALs in the C-TZ wells. Benzene concentrations were detected above the RAL (0.005 mg/L) in five C-TZ monitoring wells located on the northeastern portion of the Site: MW-17C, MW-18C, MW-23C, MW-25C, and MW-68C (Figure 5B-15). The concentrations in these wells ranged from 0.00596J mg/L (MW-23C) to 1.45 mg/L (MW-18C). Benzene was not detected above the RAL in monitoring wells MW-12C (0.00008U mg/L), MW-15C (0.000781J mg/L), MW-21C (0.00008U mg/L), or MW-76C (0.000149J mg/L) located downgradient of the benzene PCLE Zone, indicating that benzene is delineated to the RAL downgradient

in the C-TZ. Groundwater data from July/August 2014 sampling event from monitoring wells MW-28C (0.00008U mg/L), MW-47C (0.00008U mg/L), MW-48C (0.00008U mg/L), MW-53C (0.00008U mg/L), and MW-54C (0.00008U mg/L) confirm the horizontal extent of benzene concentrations to the RAL cross gradient and upgradient of the benzene PCLE Zone. Benzene concentrations from the July 2014 sampling event were detected above the RAL in off-site well MW-68C at 0.0073 mg/L, located north and crossgradient of the main portion of the elevated benzene concentrations (Figure 5B-15). PBW collected a resample from MW-68C on August 28, 2014 and the benzene result was 0.00118 mg/L, below the benzene RAL, as shown on the following graph.

Graph 1 – Benzene concentrations (mg/L) in MW-68C – July 2010-August 2014

As shown on the graph, benzene concentrations in MW-68C were greater than the RAL in January and July 2012, then decreased to below the RAL in January 2013 through January 2014. With the initial sample from the July/August 2014 event above the RAL and the resample results now below the RAL, these concentrations suggest slight fluctuations over time. UPRR will continue to monitor the concentrations and assess if additional delineation is necessary.

Methylene chloride concentrations were detected at one location, MW-18C, at a concentration 0.0161J mg/L in July 2014, above the RAL (0.005 mg/L). No other VOCs were detected during the July 2014 sampling event in the C-TZ monitoring wells at concentrations exceeding applicable RALs.

SVOCs– C-TZ

SVOCs were detected above RALs in four monitoring wells, MW-17C, MW-18C, MW-23C, and MW-25C located on the eastern portion of the Site. Site-specific SVOC COCs detected above RALs included 2,4-dimethylphenol (Figure 5B-16), 2-methylnaphthalene (Figure 5B-17), dibenzofuran (Figure 5B-18), naphthalene (Figure 5B-19), and pentachlorophenol. Numerous other SVOCs (acenaphthene, anthracene, benz(a)anthracene, benzo(a)pyrene, bis(2-chloroethoxy)methane, chrysene, fluoranthene, fluorene, phenanthrene, and pyrene) were detected in wells MW-23C and MW-25C, both of which have measureable DNAPL present in the wells. The DNAPL present in the water column in the well likely influenced the dissolved-phase concentrations. Phenol concentrations were detected in monitoring well MW-17C above the RAL (7.3 mg/L) at 8.33 mg/L. Pentachlorophenol concentrations were detected above the RAL (0.001 mg/L) in MW-18C (0.164 mg/L) and newly installed downgradient well MW-76C (0.00272 mg/L); however, no other C-TZ monitoring wells had pentachlorophenol detected above the SDL (Figure 5B-3). Pentachlorophenol concentrations in MW-76C were detected during the initial sampling event for the well after installation. A resampling event was conducted in October 2014 and did not confirm the initial detection with the resample results at <0.000592U mg/L. However, benzo(a)pyrene concentrations were detected in the resample just slightly above the RAL (0.0002 mg/L) at 0.000276J mg/L that were not detected during the initial sampling event. COC concentrations in MW-76C will be monitored during the next sampling event.

Site-related SVOCs were not detected above RALs at monitoring wells MW-21C, MW-12C, MW-28C, MW-47C, MW-48C, MW-51C, MW-53C, MW-54C located downgradient and crossgradient of the PCLE Zone in the C-TZ, indicating that SVOCs are sufficiently delineated in Unit C-TZ. Dissolved-phase data show relatively limited COC migration beyond the area where DNAPL has been observed in monitoring wells.

SVOC 2,6-dinitrotoluene concentrations were detected in MW-12C at a concentration of 0.209 mg/L above the RAL of 0.0013 mg/L. As previously discussed, 2,6-dinitrotoluene concentrations were only detected above the either the SDL or RAL in two wells, MW-14 and MW-12C during this sampling event. No other concentrations above the SDL were detected in the C-TZ wells. 2,4-Dinitrotoluene concentrations have never been detected in MW-12C dating back to 1997, except for September 2000 where an estimated concentration of 0.0004J mg/L was detected. Well MW-12C had no other COC detected at concentrations above the respective RALs during the July 2014 event. Therefore, the detection in July 2014 may be from a laboratory bias and will be confirmed during the next scheduled

sampling event.

Groundwater Plume Stability – C-TZ

VOCs and SVOCs detected in the C-TZ wells appear to be stable with some benzene fluctuations on the north crossgradient side of the PCLE Zone at MW-68C (Figure 5B-22). There does not appear to be any expansion of the C-TZ groundwater Affected Property (Figure 5B-3); however, the low levels of COC concentrations in MW-76C will continue to be evaluated. The PLOE suggest the PCLE Zone for the C-TZ is stable, but will need to be monitored at MW-68C to ensure the PCLE does not expand in that area.

Section 5.1.4 Groundwater Flow Conditions and COC Distribution – Transmissive Zone D-TZ

Using the groundwater elevations measured from the D-TZ wells in July 2014, groundwater in the D-TZ appears to flow from the southeast to northwest at a gradient of 0.0022 ft/ft (Figure 5A-4), similar to previous gauging events. Groundwater elevations range from a high of -38.82 feet HVD (MW-59D) to a low of -41.60 feet HVD (MW-36D).

Except for an estimated result for benzo(a)pyrene in MW-66D at 0.000436J mg/L above the RAL of 0.0002 mg/L, none of the site-specific COCs were detected at concentrations greater than RALs in the other D-TZ wells (Figure 5B-4) during the July/August 2014 sampling event. Monitoring well MW-66D was resampled in October 2014 to confirm the benzo(a)pyrene concentration in MW-66D. The resample results indicated benzo(a)pyrene concentrations at 0.000439J mg/L. This well is located about 800 feet east of the closest C-TZ well with a groundwater PCLE (MW-46C), and is upgradient of the HWPW site. In addition, benzo(a)pyrene concentrations above the cPCL are not common at the Site in the overlying C-TZ groundwater, with only 3 out of 18 C-TZ wells having detections of benzo(a)pyrene. Monitoring well MW-25C in the C-TZ, surrounded by wells with measurable DNAPL, had a benzo(a)pyrene detection of 0.000435J mg/L. Therefore, it is unlikely that the detection is from vertical migration of impacted groundwater from the Site. The concentrations will be evaluated during the next sampling event.

5.2 Occurrence of NAPL

This section includes previous observations of NAPL discussed at the Site discussed in the Updated APAR Addendum (PBW, 2010), as well as observations of NAPL in wells installed and gauged since 2010.

NAPL in the A-TZ

DNAPL has been observed in monitoring wells completed in the A-TZ on the northern edge of the Site (MW-57A) and in the Englewood Intermodal Yard (MW-78A). During the July 2014 monitoring event, approximately 0.81 feet of DNAPL was measured in well MW-57A and approximately 1.38 feet of DNAPL was measured in MW-78A (Figure 5A-5). In both cases, NAPL was noted on the boring log in the A-TZ sand unit. Monitoring well MW-57A is one of the wells included in the on-going DNAPL recovery pilot test where DNAPL is pumped from the well on a monthly basis. Details of the DNAPL recovery pilot test are discussed in Section 5.3.

As discussed in the Updated APAR Addendum (PBW, 2010), DNAPL had been measured in off-site well MW-32A in January and July 2010. Through evaluating the base of MW-32A, which was at 32 feet bgs, the well appeared to be completed straddling the base of the A-TZ and into the B-CZ clay and carbonate stringers. In 2011, PBW plugged MW-32A and reinstalled MW-32AR to 20 feet deep and installed MW-32B screened from 26 feet to 36 feet bgs. The soil boring log for MW-32AR did not indicate DNAPL in the A-TZ, but the soil boring log for MW-32B did note NAPL seeping from the clay at 34 feet bgs. Following installation of the two wells, DNAPL was not detected in MW-32AR, but was detected in MW-32B.

In addition to the measured DNAPL thicknesses in the monitoring wells completed in the A-TZ, Figure 5A-5 presents contours of ROST readings from CPT/ROST borings, including CPT/ROST borings conducted in 2013, that encountered the A-TZ. Also highlighted on the figure are monitoring wells where NAPL was observed in the A-TZ as noted on the soil boring logs. Following the same format for presenting ROST readings in the vadose zone (discussed in Section 4.2), ROST readings greater than 25% RE encountered in the A-TZ unit were contoured (50% RE contour interval) based on ROST data from the CPT/ROST borings. The majority of the elevated ROST readings in the A-TZ are located in and around the Recent Process Area, Original Process Area, and the AST Area (SWMU Nos. 4, 5, and 8, respectively).

ROST profiles are posted on the geologic cross sections for the Site (Figures 4C-1 through 4C-4). Highlighted intervals where ROST readings were greater than 25% RE are posted on the cross sections. Three CPT/ROST borings with the highest ROST readings in the A-TZ include CPT-16R-95 (Cross Section A-A', Figure 4C-1), CPT-34R-95 (Cross Section F-F', Figure 4C-4), and CPT-26R-95 (Cross Section E-E', Figure 4C-3). At each of these locations, elevated ROST readings were also noted in the

vadose zone above the A-TZ.

The elevated ROST readings are generally consistent with intervals where NAPL was visually observed in soil borings for A-TZ wells, except for in the Englewood Intermodal Yard area. NAPL was noted on the boring logs for A-TZ wells MW-78A and MW-79A installed in the Englewood Intermodal Yard. However, there were no significant ROST readings (i.e., >25% RE) in this area of the Site. This may indicate the NAPL may be more weathered in this area of the Site. Also, NAPL in this area may be related to the crude oil/fuel oil ASTs that were located in the area from the early 1900s to the late 1950s.

During the installation of monitoring well MW-79A in May 2014, the A-TZ sand was noted as saturated with creosote from 22 to 27 feet bgs and the well was screened from 17 feet to 27 feet bgs. However, no NAPL has been measured in the well. This phenomenon has been observed at numerous wells at the Site (MW-30A, MW-31A, MW-52A, MW-55A) where significant NAPL is noted in the boring log when the wells were installed, but no NAPL has been observed in the wells. This indicates that areas of the A-TZ may have residual saturation of DNAPL in the sand matrix that is not mobile, especially given the high viscosity of the DNAPL material (ranges from 8.52 to 192 centipoises (PBW, 2009)).

NAPL in the B-TZ/B-CZ

DNAPL has been detected in the B-TZ along the western boundary of the Site at MW-12B and MW-41B (Figure 5A-6). During the July 2014 monitoring event, DNAPL present in these B-TZ wells had a maximum in-well thickness of 6.95 feet observed at MW-41B, with MW-12B having a measured thickness of 0.82 feet. Both of these wells are included in the DNAPL recovery pilot test and are pumped monthly since the test began in February 2013. DNAPL has not been detected in monitoring wells MW-38B, MW-39B, MW-40B, TW-41B (located approximately 50 feet from MW-41B), and P-11, which indicates horizontal delineation and the limited lateral extent of the DNAPL in the B-TZ.

For the B-CZ wells, DNAPL was detected in three of the wells screened across the carbonate seams within the B-CZ unit, with two wells (MW-32B and MW-70B) located off site to the north of the Recent Process Area and one well in the Englewood Intermodal Yard (MW-75B). The in-well DNAPL thicknesses were measured at 2.11 feet in MW-32B, 0.94 feet in MW-70B, and 1.44 feet in MW-75B during the July 2014 gauging event.

Previously, DNAPL was noted in monitoring well MW-33B located north of the Site. Approximately 7.24 feet of DNAPL (in-well thickness) was observed at MW-33B in January 2010 (PBW, 2010). During

the July 2010 monitoring event, an obstruction was encountered in the well that prevented access to the bottom of the well to gauge the DNAPL. The well was plugged and abandoned, and a replacement well MW-33BR was installed within about 10 feet of MW-33B in December 2011 (boring log provided in Appendix 2). The boring log for MW-33BR noted trace NAPL in fractures in the B-CZ. Since the installation of MW-33BR, no DNAPL has been observed in the well.

ROST readings greater than 25% RE from CPT/ROST borings that encountered the B-TZ or B-CZ are also posted on Figure 5A-6, showing the overall distribution of ROST responses in the unit. As shown on the figure, the majority of the elevated ROST readings are in the vicinity of SWMUs 4 and 5. However, elevated ROST readings were observed in the B-CZ north of the Site at CPT/ROST boring CPT-43R-08, near MW-70B. The ROST readings in this area within the B-CZ are consistent with the observations of NAPL in the monitoring well MW-70B soil boring.

Elevated ROST readings were also noted in the Englewood Intermodal Yard area just slightly above the 25% RE (CPT-14-13). Monitoring wells MW-74B (installed within an area noted with >25% RE ROST readings) and MW-75B were installed in December 2011 in the Englewood Intermodal Yard to evaluate the presence of DNAPL in the B-CZ. NAPL was noted in the boring log in the B-CZ for both wells. However, no DNAPL has been detected in MW-74B during the gauging events. In contrast, no significant ROST readings were noted for CPT/ROST borings CPT-07-13 or CPT-10-13 (Figure 5A-6), but DNAPL has been observed in monitoring well MW-75B located in the immediate vicinity of CPT-07-13. Monitoring well MW-75B is included in the on-going DNAPL recovery pilot test. To delineate NAPL in the B-CZ within the Englewood Intermodal Yard, monitoring well MW-80B was installed in May 2014. No NAPL was noted in the soil boring for the well, and no DNAPL has been detected in the well following installation. Therefore, the DNAPL in the B-CZ is delineated at the Site.

No in-well DNAPL has been measured in the B-TZ/B-CZ transition monitoring wells MW-35B, MW-63B, or MW-67B. However, for each of these wells, NAPL was noted in the soil borings at the depth of the B-CZ/B-TZ.

NAPL in the C-TZ

During the July 2014 gauging event, DNAPL was present in the C-TZ wells extending from the northeast side of the Site at MW-23C to approximately 150 feet off site to the northeast near MW-44C, MW-45C, and MW-46C (Figure 5A-7). In-well DNAPL thicknesses were measured at 1.49 feet in MW-44C, 0.69 feet in MW-45C, 1.51 feet in MW-46C, and 2.14 feet in MW-23C. These wells are part of the monthly

DNAPL recovery pilot test. The thickness of DNAPL in the wells does not represent actual thicknesses in the GWBU. The monitoring wells generally extend below the lower confining unit and typically have at least a 0.5-foot to 1-foot sump at the bottom of the well, which allows DNAPL to collect in the bottom of the well. DNAPL thicknesses measured in the C-TZ wells in July 2014 were less than the measurements prior to beginning the DNAPL recovery pilot test in February 2013.

Monitoring well MW-34C, which was located between MW-44C and MW-23C, had a history of measureable DNAPL in the well. MW-34C had an obstruction in the well where the total depth could not be measured, and the well was plugged and abandoned in May 2014. Monitoring well MW-34CR was installed in May 2014 about 65 feet from MW-34C in the City of Houston ROW north of Liberty Road. No measureable DNAPL has been detected in the well.

ROST readings from CPT/ROST borings that encountered the C-TZ unit were contoured and presented on Figures 5A-7 with the measured in-well DNAPL thicknesses for the C-TZ unit. Of the 100 CPT/ROST borings conducted at the Site, 35 CPT/ROST borings were advanced to the top of the C-TZ.

The groundwater gradient of Unit C-TZ is to the southwest; however, DNAPL in this unit was encountered in wells located upgradient to the northeast (i.e., MW-25C, MW-45C, MW-46C) (Figure 5A-7). No DNAPL has been detected in nearby wells MW-28C, MW-47C, MW-53C, or MW-54C. Except for the on-site DNAPL measured in MW-23C, no measureable DNAPL has been observed in wells MW-68C, MW-15C, MW-19C, MW-21C, MW-51C, and MW-76C, indicating that the DNAPL is delineated at the Site.

5.3 DNAPL Recovery Pilot Test

As discussed in Section 2.0, PBW initiated a 24-month pilot study in February 2013 to evaluate DNAPL recovery by conducting tests on selected wells where DNAPL had been observed. Details of the scope of work for the pilot test were submitted to the TCEQ in a letter dated February 5, 2013 (PBW, 2013). A copy of the scope of work is provided in RAP Appendix 3.

The pilot test procedures consisted of measuring the depth to groundwater surface, the depth to the groundwater/DNAPL interface, and the total depth of the well relative to the top of well casing prior to DNAPL recovery. Using a peristaltic pump, DNAPL was pumped from the bottom of the well until groundwater is returned in the pump discharge. The volume of recovered DNAPL was estimated from

each well, and the well was gauged to measure the total depth of the well and depth to residual DNAPL following pumping. Recovered DNAPL was temporarily stored at the Containment Storage Area.

PBW submitted to the TCEQ in a letter dated September 25, 2014 an update after the first 18 months of the pilot test. A copy of the letter is also provided in RAP Appendix 3. Observations from the recovery testing through July 2014 are provided below:

- Monitoring wells with the thickest DNAPL measurements included MW-12B and MW-41B on the west side of the Site. During the monthly testing, DNAPL thicknesses increased following the February 2013 recovery event in MW-12B (May 2013) and in MW-41B (June 2013). However, DNAPL thickness in well MW-12B gradually decreased from 8.18 feet in May 2013 to less than a foot thick measured in the well in January 2014. The thickness in MW-12B slightly increased to about 1.54 feet in April 2014, and decreased to less than 1 foot thick in July 2014. DNAPL thickness in MW-41B decreased from the August 2013 event (measured at 10.26 feet) to about 5.5 feet thick in December 2013, but increased in March 2014 and then leveled off from 6.89 feet to 7.6 feet thick from March to July 2014.
- The other DNAPL wells tested showed significant decreases in DNAPL thicknesses over the first two months of testing, with some sporadic increases from May through August 2013. During the first 12 months DNAPL thicknesses in the wells generally decreased to less than one-foot thick, except in MW-32B. However, since December 2013, three of the C-TZ wells (MW-44C, MW-45C, and MW-46C) have had increasing DNAPL thicknesses with the largest increase of 1.4 feet at MW-44C. Except for MW45C, DNAPL thicknesses are still less than what was measured prior to beginning the pilot test. DNAPL thickness in MW-32B has also shown a slight increase since December 2013.
- DNAPL thickness in well MW-57B decreased from 1.28 feet thick in July 2013 to less than measureable (DNAPL noted on end of probe) thickness in January 2014 through July 2014.
- Of the 12 wells tested as part of the pilot test, well MW-33BR did not have any measureable DNAPL during the 18-month period. Well MW-34C was gauged in October 2013, and no DNAPL was measured in the well. In May 2014, replacement well MW-34CR was installed and is now gauged as part of the pilot test program. No DNAPL has been detected in the well.
- An estimated total of 110 gallons of DNAPL have been recovered during the 18-month period, with monthly DNAPL recovery volumes slightly decreasing over the past six months to around 5 gallons per month. Approximately 50% of the DNAPL recovered is from wells MW-12B and MW-41B.

The preliminary results from the DNAPL recovery pilot test after the first 18 months indicate the following:

- Once per month DNAPL recovery activities are resulting in an overall stable DNAPL thickness trend in the wells tested. Wells showing increasing trends will continue to be evaluated over the next six months of the pilot test program.
- The current monthly recovery frequency appears to be effective with total DNAPL volume recovered becoming stable in the wells over time.

UPRR plans to continue the monthly DNAPL pilot test recovery efforts, and will submit the next status report following the January 2015 recovery event. Concurrently with the pilot test, PBW is assessing the recovery data for evaluating more effective DNAPL recovery efforts. For each of the wells that are part of the pilot test, the little amount of recovery in the wells suggests minor amounts of DNAPL in the units. Further evaluation will be conducted following the 24-month pilot test period that will be submitted to the TCEQ as part of evaluating readily recoverable NAPL in accordance with the TCEQ TRRP-32 Risk-Based NAPL Management guidance document.

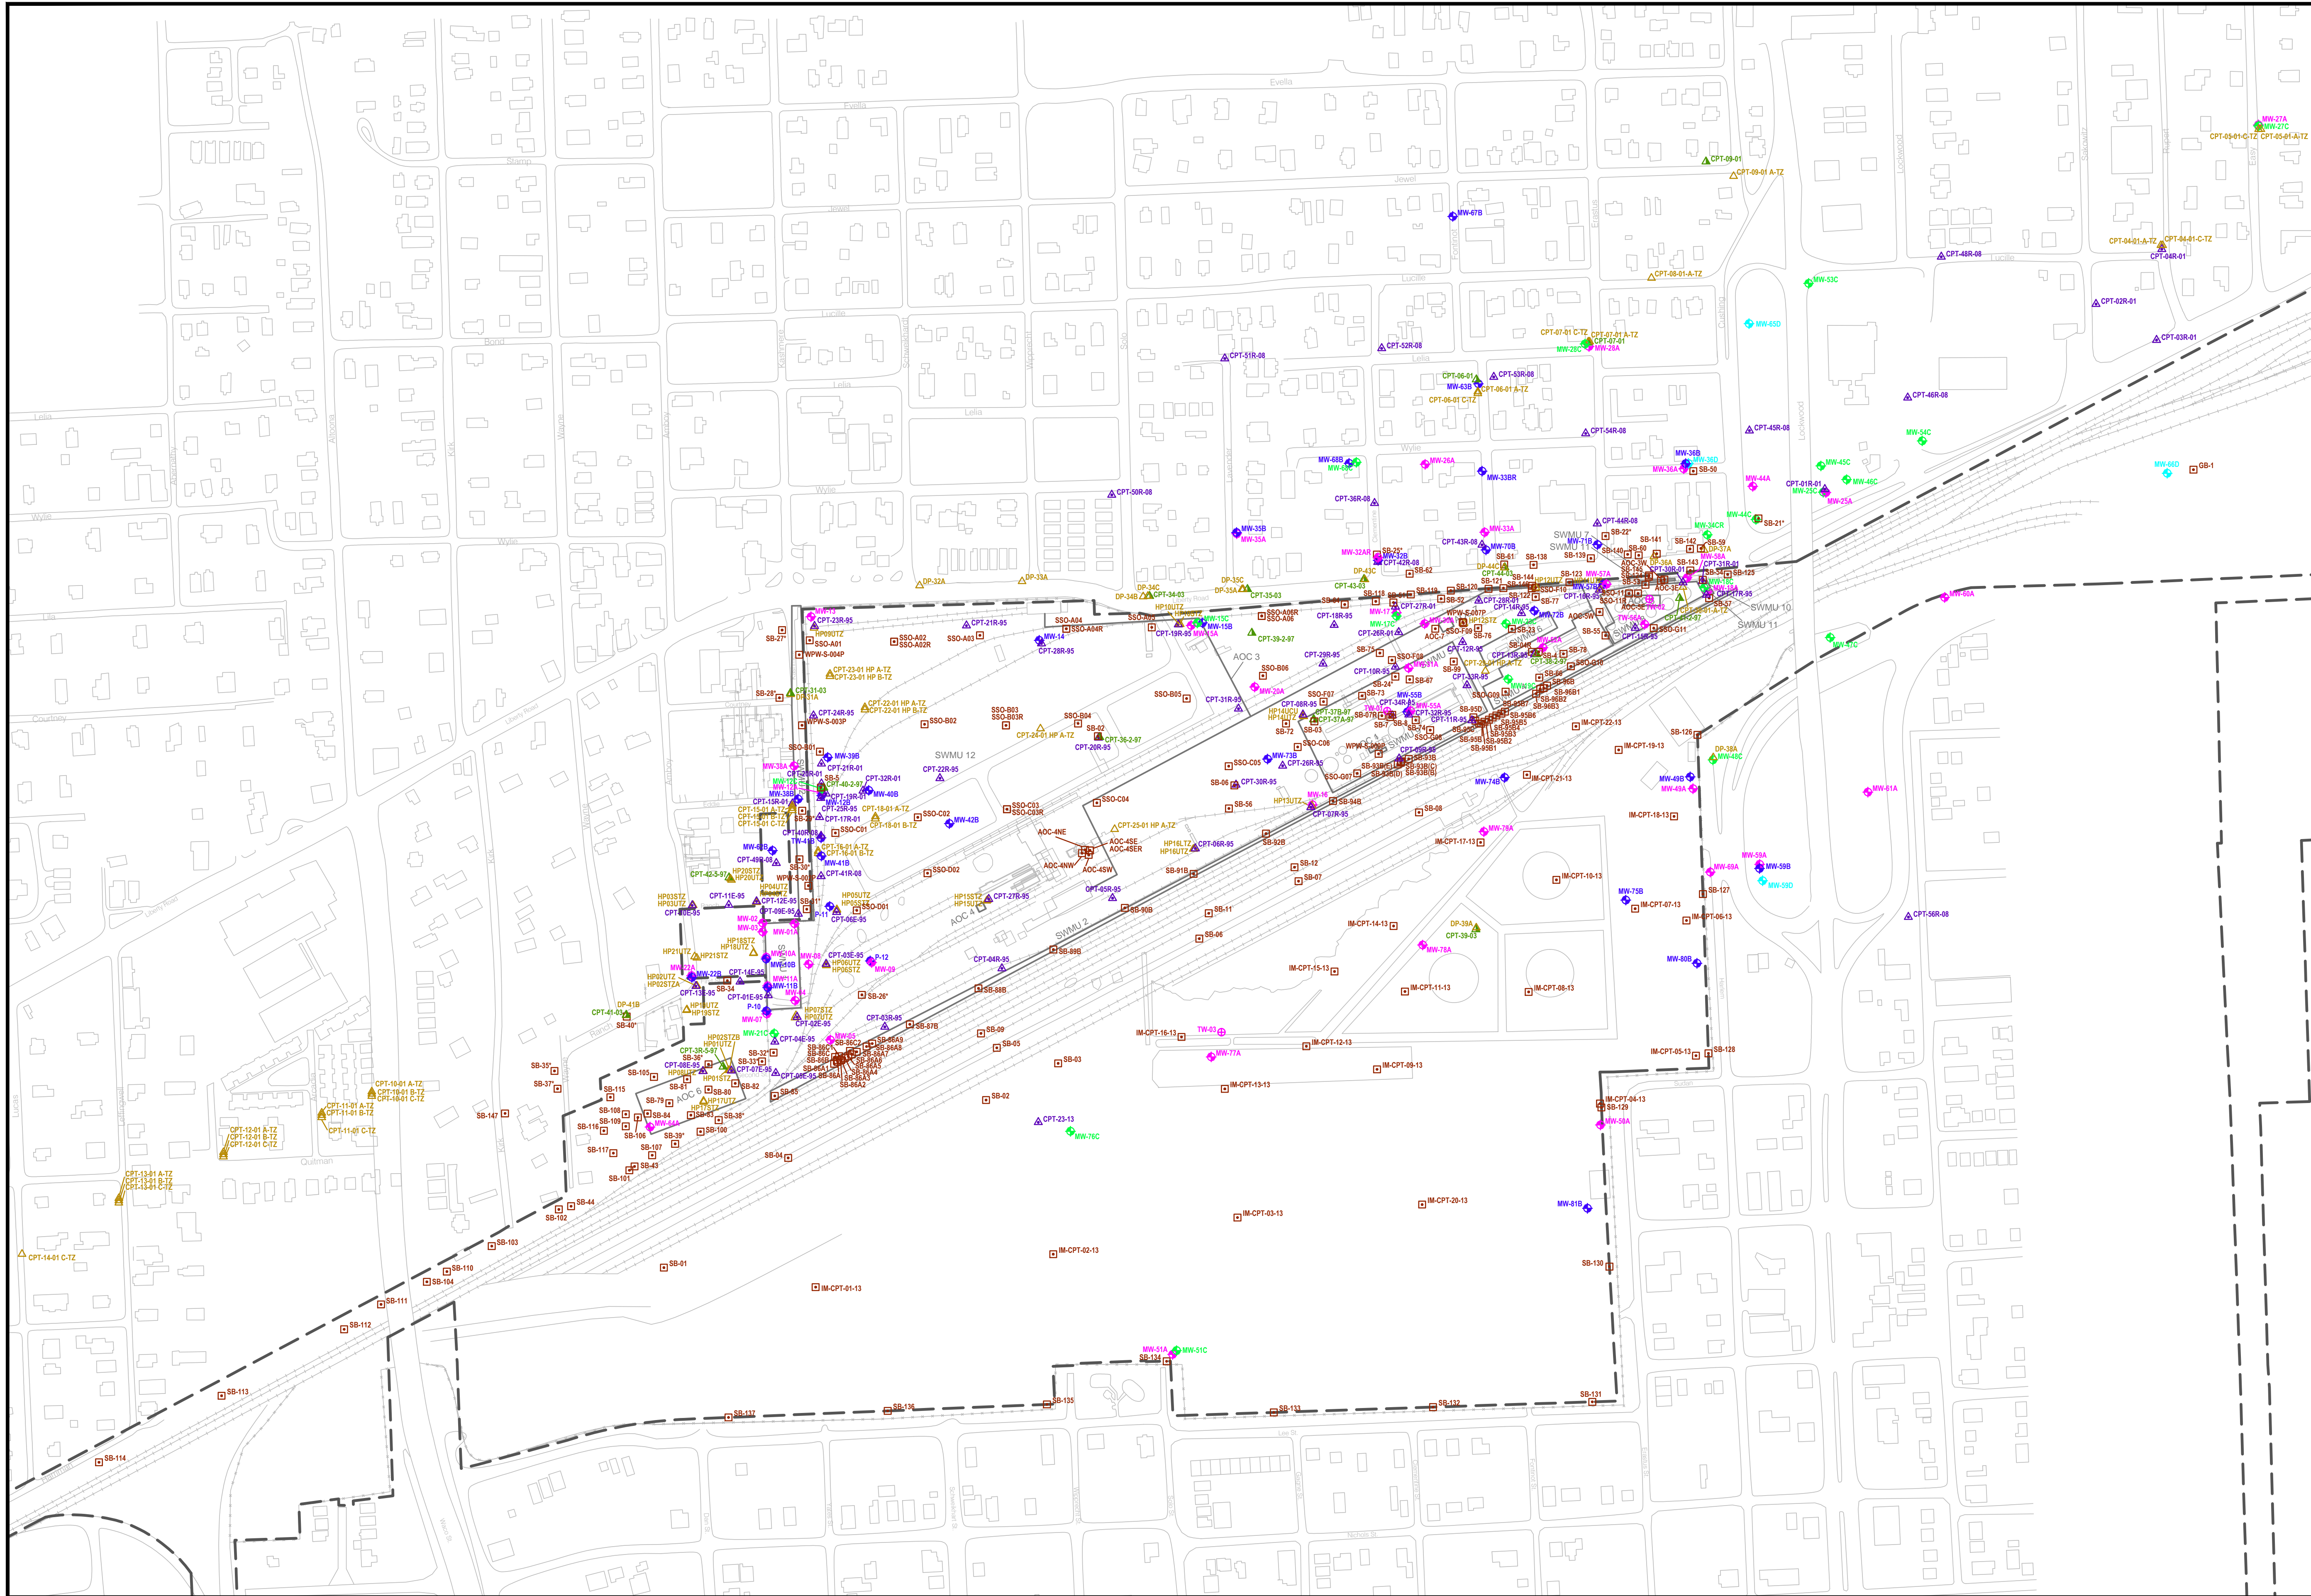

6.0 NOTIFICATIONS

With the additional groundwater and soil data collected in 2013 and 2014 being submitted to the TCEQ in the RAP, property owners identified where the groundwater PCLE Zone extends off-site and the City of Houston will be notified within 60 days of submitting the RAP of the availability of information on the Affected Property. The list of off-site property owners that will be notified is provided on RAP Appendix 5, Table 1, and shown on Figure 1 (off-site properties) and 2 (City of Houston Right of Way (ROW)).

EXPLANATION

- Fill: Sand, Silt, Clay & Gravel, wood fragments, bricks, scrap metal
- Transmissive Zone (TZ): Sand & Silty Sand
- Cohesive Zone (CZ): Clay, Silty Clay & Silt
- B-CZ Interbedded Zone B-CZ (IB): Interbedded Carbonate Seams and Calcareous Nodules with Clay & Silty Clay, within the B-CZ
- Groundwater Affected Property/PCLE Zone
- Elevation of Top of DNAPL (Fl. HVD), and Measured DNAPL Thickness in Well (Ft) (July 2014)
- NAPL or Sheen/Staining Noted in Soils for Boring Log, or for CPT/ROST Location ROST Result >25% RE

MONITORING WELL CONSTRUCTION

- Boring
- Water Level (Ft HVD) Measured July 2014 (A=ATZ, B=B-CZ/B-TZ, C=C-TZ)
- Well Screen
- Well Sump

SURFACE/SUBSURFACE SOIL CROSS SECTION D-D' & E-E'

PROJECT: 1358 BY: ADJ REVISIONS
 DATE: NOV., 2014 CHECKED: ECM

PASTOR, BEHLING & WHEELER, LLC
 CONSULTING ENGINEERS AND SCIENTISTS

- EXPLANATION**
- Fill: Sand, Silt, Clay & Gravel, wood fragments, bricks, scrap metal
 - Transmissive Zone (TZ): Sand & Silty Sand
 - Cohesive Zone (CZ): Clay, Silty Clay & Silt
 - Surface and Subsurface Soils
 - PCL Zone
 - Line Denotes Surface (0-5 Ft on-site, 0-15 Ft off-site) / Subsurface (>5 Ft on-site, >15 Ft off-site) Soil Boundary
 - Sample Interval
 - Visual Indication of NAPL or ROST Result >25% RE

- Notes:**
- Topography is estimated.
 - See Figure 1B for cross section location.
 - Concentration are in mg/L.
 - Highlighted concentrations exceed cPCLs.
 - Utility locations based on drawings provided by the City of Houston Department of Public Works & Engineering.
 - Vertical datum based on City of Houston Monument System (HVD), FHVD.
 - cPCL based on TRPP Tier 1 & 2 PCLs ($\frac{GW}{Soil} + \frac{Tot}{Ing} Soil Comb$) for 30 acre source

Surface Soil PCLs

Parameter	RAL & Off-Site cPCL (mg/Kg)	On-Site cPCL (C/1) (mg/Kg)
1,2-Dichloroethane	0.03	0.03
2,4-Dinitrochlorobenzene	0.02	0.05
2,6-Dinitrochlorobenzene	0.02	0.04
2-Methylnaphthalene	126.65	378.27
Benzene	0.10	0.10
Benzo[a]anthracene	5.65	23.58
Benzo[a]pyrene	0.56	2.37
Dibenzofuran	249.02	743.73
Naphthalene	124.10	189.76
Pentachlorophenol	0.12	0.12
Phenanthrene	1705.20	9282.29
Arsenic	5.90	5.90
Lead	275.00	275.00

Subsurface Soil PCLs

Parameter	RAL & Off-Site cPCL (mg/Kg)	On-Site cPCL (C/1) (mg/Kg)
Benzene	0.10	0.10
2,4-Dinitrochlorobenzene	0.02	0.05
2,6-Dinitrochlorobenzene	0.02	0.04
Naphthalene	137.66	192.73
2-Methylnaphthalene	126.65	378.27
Benzo[a]pyrene	57.30	57.30
Dibenzofuran	249.02	743.73
Arsenic	5.90	5.90
Lead	275.00	275.00

The seal appearing on this document was authorized by Eric C. Matzner, P.G. 795 on November 21, 2014.

SWMU 12	Railroad Tie Storage Area

AOC	Description
AOC 1	Diesel Storage Tank
AOC 3	Contaminated Portion of City Water Line
AOC 4	Location of Former Incinerator
AOC 5	City Storm Sewer
AOC 6	Inactive Wastewater Lagoon
AOC 7	Location of Former UST No. 44-023-21

Notes:
Locations of SWMU-9 and AOCs 1, 3, 5 and 7 area approximate.

The seal appearing on this document was authorized by Eric C. Matzner, P.G. 795 on November 21, 2014.

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	ALS Laboratory Group – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Groundwater sample results in data packages 1101465, 1101566, 1101672 & 1101771
Sample Collection Date(s):	January 17 -20, 2011 & January 24 – 27, 2011
Intended Use of Data:	To monitor the COCs in groundwater at the site and to evaluate whether migration of COCs could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklists (LRCs), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

Groundwater samples plus field duplicates and trip blanks were analyzed for the following:

- i. Volatile organic compounds (VOCs) by SW-846 Method 8260B¹
- ii. Semi-volatile organic compounds (SVOCs) by SW-846 Method 8270D¹

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and laboratory sample numbers. Each sample was assigned a unique field identification number. The lists of VOC and SVOC target compounds are presented in Table 2.

2.0 Laboratory Qualifications

Analytical services were provided by ALS Laboratory Group (ALS) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704231-10-3 at the time the analyses were performed. All requested analytes were included in the NELAP certification.

¹ "Test Methods for Evaluating Solid Waste Physical/Chemical Methods", SW-846, 3rd Edition, September 1986 (with subsequent revisions).

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits that are at or below the Texas Risk Reduction Tier 1 Residential Protective Concentration Levels (PCLs), ^{GW} GW_{ING} for groundwater were sought.

3.2 Sampling/ Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analysis. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.
- Field blanks were collected and analyzed to determine if the chemicals of concern would be detected based on the ambient field conditions. The field blanks were kept in the same environment in which the other field samples were collected.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and RPDs established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the water field duplicates is 30 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Summaries of the qualified analytical results are reported in Tables 3, 4, 5 and 6. Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation. Data for some analyses were reported from dilutions due to the concentrations of target or non-target compounds in the samples. The SDLs and MQLs were adjusted for the dilution factors in these cases.

Detectability Check Standard (DCS) data were included with the reports, and a review of the data indicated that some of the DCS results did not confirm within two to three times the Method Detection Limits (MDLs). However, all of the DCS results were below the critical PCLs.

4.3 Preservation and Holding Times

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference table (Table 1). Results are reported in the data package on a laboratory batch basis. All of the laboratory blank results were reported as ND (not detected).

Trip Blanks: The trip blanks, which were discrete samples handled in the field, are listed on the sample summary table. Results are reported in the data packages with the other project sample results. All of the trip blank results were reported as ND (not detected).

Field Blanks: Field blanks were collected and analyzed for volatiles and semi-volatiles and are listed on the sample summary table. Some target analytes were detected in some of the field blanks. Results for these compounds in samples with similar concentrations to the field blanks were qualified as non-detect (see Table 3).

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates for VOCs and SVOCs are addressed in the LRCs of the laboratory data packages. All surrogate recoveries were within the acceptance

limits or did not warrant qualification. Many SVOC surrogate recoveries could not be assessed due to necessary sample dilutions. However, data for these samples were also reported from lesser dilutions, and the recoveries in these dilutions were acceptable.

All internal standard areas and retention limits were acceptable per the LRCs.

4.8 Laboratory Control Samples (LCS)/ Laboratory Control Sample Duplicates (LCSD)

LCS or LCS/LCSD data for all COCs were reported for each batch. Most LCS spike recoveries and RPDs for all COCs were within the project objectives. Table 4 presents the sample data that were qualified due to outlying LCS/LCSD recoveries and/or RPDs.

4.9 Matrix Spikes

Several project samples were selected for matrix spike/matrix spike duplicate analyses for VOCs and SVOCs, and the results are reported in the data packages. All recoveries and RPDs were within the laboratory established control limits with the exception of the sample data presented with qualifiers in Table 5.

The laboratory also performed MS/MSD analyses on unrelated samples from other projects, but the data for these unrelated samples cannot be used to assess precision and accuracy for the associated project samples.

4.10 Field Duplicate

Field duplicates of samples listed below were collected and analyzed.

- WG-1620-FD01-20110118 is a duplicate of WG-1620-MW19C-20110118.
- WG-1620-FD02-20110120 is a duplicate of WG-1620-MW49B-20110120.
- WG-1620-FD03-20110126 is a duplicate of WG-1620-MW25A-20110126.

Most results showed good precision above the estimated regions of detection. Many results were non-detect, and the RPDs could not be calculated. Duplicate RPDs that exceed the criteria of 30 percent for groundwater are summarized on Table 6.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.13 Summary

The analytical data in this report are usable to assess the impact of COCs in groundwater at the site. Qualifications of the data as discussed in this report are summarized in Appendix A.

Re: HWPW-Site Wide Monitoring

Work Order: **1101465**

Dear Eric,

ALS Environmental received 17 samples on 19-Jan-2011 07:50 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 54.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

R. Kevin Given

Electronically approved by: Mary K. Knowles

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 1/31/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101465					
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49436a, R104201, R104229					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SQLs?	X				
		Was the LCSD RPD within QC limits?		X			2
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			3
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 1/31/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101465					
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49436a, R104201, R104229					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 1/31/2011
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101465
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49436a, R104201, R104229
ER# ⁵	Description	
1	<p>Low-Level Semivolatile Organics, Sample WG-1620-MW18A-20110117 : Surrogate recoveries were diluted out in the 100X and 1000X dilution.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW18C-20110117 : Surrogate recoveries were diluted out in the 2000X dilution.</p> <p>Low-Level Semivolatile Organics, Samples WG-1620-MW17C-20110117 and WG-1620-MW40B-20110118 : Surrogate recoveries were diluted out in the 1000X dilution.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW17-20110117 : Surrogate recoveries were diluted out in the 200X and 2000X dilution.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW15A-20110117 : Surrogate recoveries were diluted out in the 100X dilution.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW16-20110118 : Surrogate recoveries were diluted out in the 200X dilution.</p>	
2	Batch 49436a, Semivolatile Organics : LCSD RPD was above the control limits for 2,4-Dimethylphenol. The individual recoveries were in control.	
3	Batch R104201, Semivolatile Organics, Sample WG-1620-MW17C-20110117 : MS/MSD recoveries were below the control limits for Ethylbenzene and Xylenes, Total. The associated RPD not within the control limits. Results are flagged with an E and an O qualifier as applicable.	
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);</p> <p>NA = Not Applicable;</p> <p>NR = Not Reviewed;</p> <p>R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>

Re: HWPW-Site Wide Monitoring

Work Order: **1101566**

Dear Eric,

ALS Environmental received 20 samples on 21-Jan-2011 08:40 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 62.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

R. Kevin Given

Electronically approved by: Mary K. Knowles

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/7/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101566					
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49515, R104380, R104392, R104405					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SQLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data							
Laboratory Name: ALS Laboratory Group				LRC Date: 2/7/2011			
Project Name: HWPW-Site Wide Monitoring				Laboratory Job Number: 1101566			
Reviewer Name: R. Kevin Given				Prep Batch Number(s): 49515, R104380, R104392, R104405			
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Re: HWPW-Site Wide Monitoring

Work Order: **1101672**

Dear Eric,

ALS Environmental received 15 samples on 26-Jan-2011 08:30 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 49.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "R. Kevin Given".

Client: Pastor, Behling & Wheeler, LLC
Project: HWPW-Site Wide Monitoring
Work Order: 1101672

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC

Work Order: 1101672

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 02/09/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101672					
Reviewer Name: Kevin Given		Prep Batch Number(s): 49686, R104471, R104531					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SQLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL minimize the matrix interference affects on the sample results?	X				2
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 02/09/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101672					
Reviewer Name: Kevin Given		Prep Batch Number(s): 49686, R104471, R104531					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>							

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 02/09/2011
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101672
Reviewer Name: Kevin Given		Prep Batch Number(s): 49686, R104471, R104531
ER# ⁵	Description	
1	Low-Level Semivolatile Organics, Sample WG-1620-MW33B-20110124 : Surrogate recoveries were diluted out in the 100X and 1000X dilution. Low-Level Semivolatile Organics, Sample WG-1620-MW32A-20110125 : Surrogate recoveries were diluted out in the 500X, 25000X, and 5000X dilution.	
2	Low-Level Semivolatile Organics, Sample WG-1620-MW32A-20110125 could not be analyzed at a lower dilution due to matrix interference. TCL Volatile Organics, Samples WG-1620-MW33B-20110124 and WG-1620-MW32A-20110125 could not be analyzed at a lower dilution due to high concentration of target analytes.	
Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period. O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Re: HWPW-Site Wide Monitoring

Work Order: **1101770**

Dear Eric,

ALS Environmental received 19 samples on 28-Jan-2011 07:50 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 62.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

R. Kevin Given

Electronically approved by: Mary K. Knowles

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC
Project: HWPW-Site Wide Monitoring
Work Order: 1101770

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/11/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101770					
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49687, R104632, R104651					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SQLs?	X				
		Was the LCSD RPD within QC limits?			X		
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Were MS/MSD RPDs within laboratory QC limits?		X			3
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/11/2011					
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101770					
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49687, R104632, R104651					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>							

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/11/2011
Project Name: HWPW-Site Wide Monitoring		Laboratory Job Number: 1101770
Reviewer Name: R. Kevin Given		Prep Batch Number(s): 49687, R104632, R104651
ER# ⁵	Description	
1	<p>Low-Level Semivolatile Organics, Sample WG-1620-MW25C-20110126 : Surrogate recoveries were diluted out in the 100X, 500X, and 2500X dilution.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW35B-20110127 : Surrogate recoveries were diluted out in the 100X and 500X.</p> <p>Low-Level Semivolatile Organics, Sample WG-1620-MW63B-20110127 : Surrogate recoveries were diluted out in the 250X.</p> <p>Low-Level Semivolatile Organics surrogate recovery was outside the control limits for Sample WG-1620-MW63B-20110127. Results confirmed as matrix interference by re-analysis at dilution.</p>	
2	<p>Batch 49687, Semivolatile Organics, Sample WG-1620-MW67B-20110127 : MS/MSD recoveries were below the control limits for several analytes. The associated RPD's were within the control limits.</p> <p>Batch 49687, Semivolatile Organics, Sample WG-1620-MW50A-20110127 : MS/MSD recoveries were below the control limits for Naphthalene. The associated RPD was within the control limits.</p>	
3	<p>Batch 49687, Semivolatile Organics, Sample WG-1620-MW67B-20110127 : MSD RPD was above the control limits for Bis(2-ethylhexyl)phthalate and Nitrobenzene.</p>	
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period. O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
µg/L	Micrograms per Liter

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	ALS Laboratory Group – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Groundwater sample results in data packages: 1107486, 1107622, 1107677, 1107721, 1107899, and 1107935
Sample Collection Date(s):	July 13-28, 2011
Intended Use of Data:	To monitor the COCs in groundwater at the site and to evaluate whether migration of Chemicals of Concern (COC) could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

Ninety two (92) groundwater samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Table 3.

2.0 Laboratory Qualifications

Analytical services were provided by ALS Laboratory Group (ALS) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704231-11-4 at the time the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits that are at or below the

Texas Risk Reduction Tier 1 Residential Protective Concentration Levels (PCLs), ^{GW} GW _{ING} for groundwater were sought.

3.2 Sampling/ Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Field and equipment blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and RPDs established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the water field duplicates is 30 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

All Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL) with the exception of pentachlorophenol on instrument SV-6.

4.3 Preservation and Holding Times

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. All of the laboratory blank results were reported as ND (not detected).

Trip Blanks: The trip blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. All of the trip blank results were reported as ND (not detected).

Field Blanks and Equipment Blanks: The field and equipment blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. Sample results with analyte concentrations similar to those found in the blanks were qualified as non-detect (see Table 4).

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. All surrogate recoveries were within the acceptance limits.

All internal standard areas and retention limits were acceptable per the LRCs with the exception of sample WG-1620-MW65D-20110727. Internal Standard recoveries were below the control limits for phenanthrene-d10, chrysene-d12 and perylene-d12. MS/MSD analyses confirm matrix interference.

4.8 Laboratory Control Samples (LCS)/ Laboratory Control Sample Duplicates (LCSD)

LCS or LCS/LCSD data for all COCs were reported for each batch. LCS spike recoveries and RPDs for all COCs were within the project objectives with the exception of the sample results presented with qualifiers in Table 5.

4.9 Matrix Spikes

Matrix spike/matrix spike duplicates were prepared and analyzed with most batches for all requested parameters. The results are reported in the data package on a laboratory batch basis. For some SVOC and VOC batches, insufficient sample was available for MS/MSD analyses. In these cases, analyses of LCS/LCSD were used to determine batch precision and accuracy for VOCs and SVOCs.

All recoveries and RPD met criteria with the exception of the sample results presented with qualifiers in Table 6.

The laboratory also performed MS/MSD on unrelated samples from other projects. The data for these unrelated samples cannot be used to assess accuracy and precision for the associated project samples.

4.10 Field Duplicate

Field duplicate samples were collected and analyzed for the target analytes as outlined in Table 1.

All relative percent differences (RPDs) were < 30% for sample results greater than 5 times the MQL indicating acceptable precision above the estimated regions of detection with the exception of the sample results presented with qualifiers in Table 7.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 Summary

The analytical data in this report are usable to assess the impact of COCs in groundwater at the site with the qualification noted herein.

Notes:

- Not analyzed.

J - Estimated.

JL - Estimated value, low bias.

U - Not detected.

UJL - The analyte was not detected above the sample quantitation limit. The reported quantitation limit is an estimated quantity and may be biased low.

Re: UPRR Houston Wood GW

Work Order: **1107486**

Dear Eric,

ALS Environmental received 19 samples on 15-Jul-2011 07:34 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 64.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 08/03/2011					
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107486					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 53985, R113290, R113296, R113336, R113367, R113431					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?		X			2
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			3
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 08/3/2011					
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107486					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 53985, R113290, R113296, R113336, R113367, R113431					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 08/3/2011
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107486
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 53985, R113290, R113296, R113336, R113367, R113431
ER# ⁵	Description	
1	Most samples for Semivolatile Organics were analyzed at multiple dilutions. Surrogate recoveries were diluted out in the higher dilutions, but were in control in the original runs.	
2	Batch 53985, Semivolatile Organics : LCS/LCSD RPDs were above the control limits for 2-Chloronaphthalene and Pentachlorophenol. The individual recoveries were in control.	
3	Batch R113296, Volatile Organics, Sample 1107523-01 : MS/MSD is for an unrelated sample.	
Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period. O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Re: HWPW Site-Wide GW

Work Order: **1107622**

Dear Eric,

ALS Environmental received 20 samples on 20-Jul-2011 07:30 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 70.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC
Project: HWPW Site-Wide GW
Work Order: 1107622

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 08/03/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107622					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 54132, R113367, R113467, R113490, R113613, R113626, R113636					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?			X		
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 08/03/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107622					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 54132, R113367, R113467, R113490, R113613, R113626, R113636					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group	LRC Date: 08/03/2011
Project Name: HWPW Site-Wide GW	Laboratory Job Number: 1107622
Reviewer Name: Patricia L. Lynch	Prep Batch Number(s): 54132, R113367, R113467, R113490, R113613, R113626, R113636

ER#⁵	Description
1	Samples WG-1620-MW33B-20110719 and WG-1620-MW32A-20110719 were analyzed at multiple dilutions, and surrogate recoveries were diluted out in the higher dilutions. Surrogate recoveries were in control in the lower dilutions.
2	Batch 54132, Low-Level Semivolatile Organics, Sample WG-1620-MW28C-20110719 : MS/MSD recoveries were below the control limits for multiple analytes. The associated LCS recoveries and MS/MSD RPD's were within the control limits. Batch R113490, Volatile Organics, Sample 1107608-03 : MS/MSD is for an unrelated sample.

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
 O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);
 NA = Not Applicable;
 NR = Not Reviewed;
 R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Re: UPRR Houston Wood GW

Work Order: **1107677**

Dear Eric,

ALS Environmental received 16 samples on 21-Jul-2011 11:45 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 59.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC
Project: UPRR Houston Wood GW

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/08/2011					
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107677					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54165, R1113426, R113463, R113626, R113636, R113694					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Were MS/MSD RPDs within laboratory QC limits?		X			3
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				4
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/08/2011					
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107677					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54165, R1113426, R113463, R113626, R113636, R113694					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/08/2011
Project Name: UPRR Houston Wood GW		Laboratory Job Number: 1107677
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54165, R1113426, R113463, R113626, R113636, R113694
ER# ⁵	Description	
1	Samples WG-1620MW25C-20110720 and -1620MW35B-20110720 for semivolatile organics were analyzed at multiple dilutions. Surrogate recoveries were diluted out in the higher dilutions, but were in control in the analyses performed at lesser dilutions.	
2	Batch 54165, Low-Level Semivolatile Organics, Sample WG-1620MW67B-2011720: MS/MSD recoveries were above the control limits for 2,6-Dinitrotoluene. The associated LCS and MS/MSD RPD were within the control limits. This compound was non-detect in the background sample.	
3	Batch 54165, Low-Level Semivolatile Organics, Sample WG-1620MW67B-2011720: MS/MSD RPD was above the control limits for multiple analytes.	
4	The semivolatile target compounds bis(2-ethylhexyl)phthalate and naphthalene were detected in the field blank, but no target compounds were detected in the method blank.	
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Re: HWPW Site-Wide GW

Work Order: **1107721**

Dear Eric,

ALS Environmental received 12 samples on 22-Jul-2011 11:40 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 49.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/08/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107721					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54173, R113636, R113694, R113771					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data							
Laboratory Name: ALS Laboratory Group				LRC Date: 8/08/2011			
Project Name: HWPW Site-Wide GW				Laboratory Job Number: 1107721			
Reviewer Name: Pat Lynch				Prep Batch Number(s): 54173, R113636, R113694, R113771			
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Re: HWPW Site-Wide GW

Work Order: **1107899**

Dear Eric,

ALS Environmental received 16 samples on 27-Jul-2011 06:05 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 58.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

RIGHT SOLUTIONS RIGHT PARTNER

Client: Pastor, Behling & Wheeler, LLC
Project: HWPW Site-Wide GW
Work Order: 1107899

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC

Work Order: 1107899

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/3/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107899					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54305, R113766, R113771, R113780					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?		X			1
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data							
Laboratory Name: ALS Laboratory Group				LRC Date: 8/3/2011			
Project Name: HWPW Site-Wide GW				Laboratory Job Number: 1107899

# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group	LRC Date: 8/3/2011

Reviewer Name: Pat Lynch	Prep Batch Number(s): 54305, R113766, R113771, R113780

ER#⁵	Description
1	Batch 54305, Volatile Organics, Sample WG-1620-MW13-2011726 : MS/MSD RPD was above the control limits for 2,4-dimethylphenol. All recoveries were in control.

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);
NA = Not Applicable;
NR = Not Reviewed;
R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Client: Pastor, Behling & Wheeler, LLC
Project: HWPW Site-Wide GW
Work Order: 1107899

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Re: HWPW Site-Wide GW

Work Order: **1107935**

Dear Eric,

ALS Environmental received 9 samples on 28-Jul-2011 03:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 40.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/3/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107935					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54321, R113940, R114007					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				1
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?		X			3
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?		X			4
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				5
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/3/2011					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107935					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54321, R113940, R114007					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?		X			6
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>							

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 8/3/2011
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1107935
Reviewer Name: Pat Lynch		Prep Batch Number(s): 54321, R113940, R114007
ER# ⁵	Description	
1	Samples WG-1620-MW58A-2011727 and WG-1620-MW09-20110727 were listed on the chain-of-custody, but were not included in this batch of samples. These samples were included in ALS work order 1107899.	
2	Batch 54321, Low-Level Semivolatile Organics : LCSD recovery was above the control limits for 4,6-dinitro-2-methylphenol. The results for this compound in the associated samples are non- detect.	
3	Batch 54321, Low-Level Semivolatile Organics : LCS/LCSD RPDs were above the control limits for multiple analytes. The individual recoveries were in control.	
4	Batch 54321, Low-Level Semivolatile Organics, Sample WG-1620-MW65D-20110727 : MS/MSD RPD was above the control limits for 4-nitrophenol.	
5	The target compound bis (2-ethylhexyl) phthalate was reported in the field blank at a concentration that is similar to that reported in the associated samples. This compound was non-detect in the method blank.	
6	Semivolatile Organics: Internal Standard recoveries for sample WG-65D-20110727 were below the control limits for phenanthrene-d10, chrysene-d12 and perylene-d12 9see attached internal standard summary report. MS/MSD analyses confirm matrix interference.	
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	ALS Laboratory Group – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Groundwater sample results in data package: 1108961
Sample Collection Date(s):	August 25, 2011
Intended Use of Data:	To monitor the COCs in groundwater at the site and to evaluate whether migration of Chemicals of Concern (COC) could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

Three groundwater samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Table 3.

2.0 Laboratory Qualifications

Analytical services were provided by ALS Laboratory Group (ALS) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704231-11-4 at the time the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits that are at or below the Texas Risk Reduction Tier 1 Residential Protective Concentration Levels (PCLs), ^{GW}GW_{ING} for groundwater were sought.

3.2 Sampling/ Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, if applicable, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and RPDs established by the laboratory are adopted as the acceptance criteria for the project. Third, if applicable, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the water field duplicates is 30 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

All Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL).

4.3 Preservation and Holding Times

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. All of the laboratory blank results were reported as ND (not detected).

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. All surrogate recoveries were within the acceptance limits.

All internal standard areas and retention limits were acceptable per the LRCs.

4.8 Laboratory Control Samples (LCS)/ Laboratory Control Sample Duplicates (LCSD)

LCS or LCS/LCSD data for all COCs were reported for each batch. LCS spike recoveries and RPDs for all COCs were within the project objectives.

4.9 Matrix Spikes

Matrix spike/matrix spike duplicates were prepared and analyzed with the batches for all requested parameters. The results are reported in the data package on a laboratory batch basis. No site-specific samples were selected for MS/MSD analyses. In these cases, analyses of LCS/LCSD were used to determine batch precision and accuracy for VOCs and SVOCs.

4.10 Field Duplicate

No field duplicate samples were collected for this event.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 Summary

The analytical data in this report are usable to assess the impact of COCs in groundwater at the site.

Re: UPRR Houston Wood Resampling

Work Order: **1108961**

Dear Eric,

ALS Environmental received 4 samples on 26-Aug-2011 09:25 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 11.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

Client: Pastor, Behling & Wheeler, LLC
Project: UPRR Houston Wood Resampling
Work Order: 1108961

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Project Name: UPRR Houston Wood Resampling		Laboratory Job Number: 1108961					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 55063, R115554					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 9/8/2011					
Project Name: UPRR Houston Wood Resampling		Laboratory Job Number: 1108961					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 55063, R115554					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X

ER#⁵	Description
	No exceptions.

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);
NA = Not Applicable;
NR = Not Reviewed;
R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Re: UPRR Houston Wood Resampling

Work Order: **1108961**

Dear Eric,

ALS Environmental received 4 samples on 26-Aug-2011 09:25 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 11.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

Electronically approved by: Makenzie L. Henderson

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 9/8/2011					
Project Name: UPRR Houston Wood Resampling		Laboratory Job Number: 1108961					
Reviewer Name: Pat Lynch		Prep Batch Number(s): 55063, R115554					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group			LRC Date: 9/8/2011				
Project Name: UPRR Houston Wood Resampling			Laboratory Job Number: 1108961				
Reviewer Name: Pat Lynch			Prep Batch Number(s): 55063, R115554				
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	ALS Laboratory Group – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Groundwater sample results in data packages: 1202096, 1202263, and 1202555
Sample Collection Date(s):	February 1-3, 6-9, 14-16, 2012
Intended Use of Data:	To monitor the COCs in groundwater at the site and to evaluate whether migration of Chemicals of Concern (COC) could result in risk to human or ecological health.

1.0 SCOPE OF DATA USABILITY SUMMARY

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

101 groundwater samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Table 3.

2.0 LABORATORY QUALIFICATIONS

Analytical services were provided by ALS Laboratory Group (ALS) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704231-11-5 at the time the analyses were performed.

3.0 PROJECT OBJECTIVES

3.1 LEVELS OF REQUIRED PERFORMANCE (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits that are at or below the Texas Risk Reduction Tier 1 Residential Protective Concentration Levels (PCLs), ^{GW} GW _{ING} for groundwater were sought.

3.2 SAMPLING/ANALYTICAL QA/QC OBJECTIVES

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Field and equipment blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and RPDs established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the water field duplicates is 30 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 DATA REVIEW/VALIDATION RESULTS

4.1 ANALYTICAL RESULTS

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

All Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL).

4.3 PRESERVATION AND HOLDING TIMES

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 SAMPLE CONTAINERS

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 CALIBRATIONS

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 BLANKS

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. All of the laboratory blank results were reported as ND (not detected).

Trip Blanks: The trip blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. All of the trip blank results were reported as ND (not detected).

Field Blanks and Equipment Blanks: The field and equipment blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. Sample results with analyte concentrations similar to those found in the blanks were qualified as non-detect (see Table 4).

4.7 INTERNAL STANDARD AND SURROGATE RECOVERIES

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. All surrogate recoveries were within the acceptance limits with the exception of the sample results presented with qualifiers in Table 5.

All internal standard areas and retention limits were acceptable per the LRCs with the exception of samples WG-1620-MW39B-20120202, WG-1620-TW41B-20120201, G-1620-MW32B-20120209, and WG-1620-MW34C-20120208. Re-analysis of the samples confirmed matrix interference. Table 6 presents the sample results that were qualified due to outlying internal standard recoveries.

4.8 LABORATORY CONTROL SAMPLES (LCS)/ LABORATORY CONTROL SAMPLE DUPLICATES (LCSD)

LCS or LCS/LCSD data for all COCs were reported for each batch. LCS spike recoveries and RPDs for all COCs were within the project objectives indication acceptable overall laboratory performance.

4.9 MATRIX SPIKES

Matrix spike/matrix spike duplicates (MS/MSDs) were prepared and analyzed with most batches for all requested parameters. The results are reported in the data package on a laboratory batch basis. For some semi-volatile organic compound (SVOC) and volatile organic compound (VOC) batches, insufficient sample was available for MS/MSD analyses. In these cases, analyses of LCS/LCSD were used to determine batch precision and accuracy for VOCs and SVOCs.

All recoveries and RPD met criteria with the exception of the sample results presented with qualifiers in Table 7.

The laboratory also performed MS/MSD on unrelated samples from other projects. The data for these unrelated samples cannot be used to assess accuracy and precision for the associated project samples.

4.10 FIELD DUPLICATE

Field duplicate samples were collected and analyzed for the target analytes as outlined in Table 1.

All relative percent differences (RPDs) were < 30% for sample results greater than 5 times the MQL indicating acceptable precision above the estimated regions of detection with the exception of the sample results presented with qualifiers in Table 8.

4.11 FIELD PROCEDURES

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 SUMMARY

The analytical data in this report are usable to assess the impact of COCs in groundwater at the Site with the qualification noted herein.

Re: HWPW Site-Wide GW

Work Order: **1202096**

Dear Eric,

ALS Environmental received 39 samples on 01-Feb-2012 through 03-Feb-2012 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 115.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/13/2012					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1202096					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 58686, 58691, R122836, R122842, R122878, R122892, R123047, R123114, R123230					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?		X			2
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?		X			3
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			4
		Were MS/MSD RPDs within laboratory QC limits?		X			5
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?	X				
		Were analytical duplicates analyzed at the appropriate frequency?	X				
		Were RPDs or relative standard deviations within the laboratory QC limits?	X				
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?		X			6
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/13/2012					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1202096					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 58686, 58691, R122836, R122842, R122878, R122892, R123047, R123114, R123230					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?		X			7
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?	X				
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?		X			8
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?	X				
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?	X				
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group	LRC Date: 2/13/2012
Project Name: HWPW Site-Wide GW	Laboratory Job Number: 1202096
Reviewer Name: Patricia L. Lynch	Prep Batch Number(s): 58686, 58691, R122836, R122842, R122878, R122892, R123047, R123114, R123230

ER# ⁵	Description
1	<p>Low-Level Semivolatile Organics: Surrogate recoveries in many samples were diluted out in the higher dilutions, but were in control I the lower dilutions.</p> <p>Low-Level Semivolatile Organics: Surrogate recovery (2-fluorbiphenyl) was marginally below the control limits for sample WG-1620-MW21C-20120202. Result was confirmed as matrix interference by re-analysis at dilution.</p> <p>Volatile Organics: Surrogate recovery (4-bromofluorobenzene) was marginally below the control limits for sample WG-1620-MW18C-20120202. Result was confirmed as matrix interference by re-analysis at dilution.</p>
2	Batch 58686, Low-Level Semivolatile Organics: LCS/ LCSD RPDs were above the control limits for 4,6-dinitro-2-methylphenol and N-nitrosodiphenylamine. The individual recoveries were in control.
3	Batch 58691, Low-Level Semivolatile Organics, Insufficient sample to perform MS/MSD. LCS/LCSD analyses were performed.
4	<p>Batch 58686, Low-Level Semivolatile Organics, Sample WG-1620-MW13-20120202: MS/ recoveries were below the control limits for several target compounds. The associated LCS recoveries were within the control limits.</p> <p>Batch R122836, Volatile Organics, Sample 1202006-06 : MS/MSD is for an unrelated sample.</p> <p>Batch R122842, Volatile Organics, Sample 1202006-01 : MS/MSD is for an unrelated sample.</p> <p>Batch R122892, Volatile Organics, Sample WG-1620-MW13-20120202 : MSD recoveries for ethylbenzene and vinyl chloride were below the control limits. The associated LCS and MS recoveries were in control.</p>
5	<p>Batch 58686, Low-Level Semivolatile Organics, Sample WG-1620-MW13-20120202: MS/MSD RPDs were above the control limits for numerous target compounds.</p> <p>Batch R122842, Volatile Organics, Sample 1202006-01 : MS/MSD RPDs are for an unrelated sample.</p> <p>Batch R122892, Volatile Organics, Sample WG-1620-MW13-20120202: MS/MSD RPDs were above the control limits for methylene chloride and vinyl chloride.</p>
6	<p>Low-Level Semivolatile Organics: Many samples could not be analyzed at a lower dilution due to matrix interference.</p> <p>Naphthalene was detected in WG-1602-FB01-20120201 and WG-1602-FB03-20120202 at concentrations that are above the MQLs. This compound was non-detect in the associated method blanks. The extracts were reanalyzed and the results were confirmed.</p>
7	Batch R122892, Volatile Organics : CCV %D was above the control limits for toluene-d8.
8	Semivolatile Organics : Internal standard recoveries for 1,4-dichlorobenzene, acenaphthene-d10 and naphthalene-d8 were below the control limits for samples WG-1620-MW39B-20120201 and WG-1620-TW41B-20120201. Reanalysis confirms matrix interference.

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

**QUALIFIERS,
ACRONYMS, UNITS**

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

<u>Acronym</u>	<u>Description</u>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<u>Units Reported</u>	<u>Description</u>
mg/L	Milligrams per Liter

Re: HWPW Site-Wide GW

Work Order: **1202263**

Dear Eric,

ALS Environmental received 36 samples on 07-Feb-2012 through 09-Feb-2012 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 107.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in cursive script that reads "Patricia L. Lynch".

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Client: Pastor, Behling & Wheeler, LLC

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by TCEQ or _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/16/2012					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1202263					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 58817, 58851, 58852, R123306, R123346, R123405					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Was % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?			X		
		If required for the project, TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?		X			2
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?		X			3
		Were MS/MSD RPDs within laboratory QC limits?		X			4
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?			X		
		Were analytical duplicates analyzed at the appropriate frequency?			X		
		Were RPDs or relative standard deviations within the laboratory QC limits?			X		
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				5
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/16/2012					
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1202263					
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 58817, 58851, 58852, R123306, R123346, R123405					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning:					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS):					
		Were IS area counts and retention times within the method-required QC limits?		X			6
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results:					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSS?	X				
S11	OI	Proficiency test reports:					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs):					
		Are laboratory SOPs current and on file for each method performed?	X				

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.

O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);

NA = Not Applicable;

NR = Not Reviewed;

R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Reportable Data

Laboratory Name: ALS Laboratory Group		LRC Date: 2/16/2012
Project Name: HWPW Site-Wide GW		Laboratory Job Number: 1202263
Reviewer Name: Patricia L. Lynch		Prep Batch Number(s): 58817, 58851, 58852, R123306, R123346, R123405
ER# ⁵	Description	
1	Low-Level Semivolatile Organics: Surrogate recoveries were diluted out in the higher dilutions in several samples, but were in control in the lower dilutions..	
2	Batch 58817, Low-Level Semivolatile Organics, Insufficient sample to perform MS/MSD. LCS/LCSD analyses were performed. Batch 58852, Low-Level Semivolatile Organics, Insufficient sample to perform MS/MSD. LCS/LCSD analyses were performed.	
3	Batch 58851, Low-Level Semivolatile Organics, Sample WG-1620-MW67B-20120209 : MSD recovery was above the control limits for pentachlorophenol. The associated MS and LCS recoveries and MS/MSD RPD were within the control limits.	
4	Batch 58851, Low-Level Semivolatile Organics, Sample WG-1620-MW67B-20120209 : MS/MSD RPDs were above the control limits for several target compounds.	
5	Low-Level Semivolatile Organics and Volatiles Organics: Several samples could not be analyzed at a lower dilution due to high concentrations of non-target compounds. Bis(2-ethylhexyl)phthalate was detected in sample WG-1620-FB05-20120208 at a concentration that is above the MQL. This compound was non-detect in the associated method blank. A recent inquiry from the supplier of sample containers revealed that the bottles are certified to 2.5 ug/L which is above the result for this sample. ALS confirmed the MDL for this compound by analysis of the DCS.	
6	Low-Level Semivolatile Organics: All internal standard areas were below the control limits for samples WG-1620-MW32B-20120209 and WG-1620-MW3CB-20120208. Reanalysis confirms matrix interference.	
<p>Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.</p> <p>O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable); NA = Not Applicable; NR = Not Reviewed; R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).</p>
