ER #¹	DESCRIPTION
1	See Case Narrative.
2	Due to the level of dilution required for samples 600-68489-1, 3, 4, 6, 7, 7DL, 9 and 11; surrogate recoveries are not reported. Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Sample 600-68489-12 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.
3	The 4-Nitrophenol %RPD between samples 600-68489-2 MS and MSD was outside control limits. Non-homogeneity of the sample matrix is suspected.
4	All of the SDLs in samples 600-68489-1, 3, 4, 6, 7, 9 and 11 were elevated due to the nature of the sample matrix and/or the high concentration of target analytes.

Reviewer Name: YX	Prep Batch Number: 600-99613, 99676, 99988(S) and 99606(W)-VOA
ER #¹	DESCRIPTION
1	Surrogate recoveries (BFB and 1,2-DCA-d4) were outside of acceptance limits for sample 600-68567-12 1X. Evidence of matrix interference is present as confirmed by the 10X analysis.
2	Methylene chloride was detected above the MDL, but below the MQL in the method blanks for batches 600-99613 and 99676. This analyte is a recognized potential laboratory contaminant. The levels of detection are below the recommended reporting limit and the appropriate flags have been applied to the report.
3	The Ethylbenzene and Total Xylenes SDLs were elevated in samples 600-68567-11 and 12 due to the high concentration of these analytes.
4	All Internal Standard responses were below the acceptance limits for 600-68567-12 1X, indicating a high bias. The sample shows evidence of matrix interference as confirmed by the 10X analysis. The laboratory determined and QA confirmed that the 1X analysis was the best achievable analytical results for all but the over calibration range analytes reported from the medium level analysis—see attached chromatogram and ISTD responses.

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 02/25/13
Project Name: UPRR HWPW	Laboratory Job Number 600-68567
Reviewer Name: JOH	Prep Batch Number(s): 600-99571, 99693(S), 99685(W) - SV
ER #¹	DESCRIPTION
1	<p>Six surrogates are used for this analysis. The laboratory's SOP allows one base one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Samples 600-68567-2 and 6 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.</p> <p>Due to the level of dilution required for samples 600-68567-3, 3MS, 3MSD, 4, 5, 7, 10, 11, 12 and 12DL; surrogate recoveries are not reported.</p>
2	Naphthalene was detected above the MDL, but below the MQL in the method blank for batch 99685. The level of detection is below the recommended reporting limit and the appropriate flags have been applied.
3	<p>The matrix spike duplicate (MSD) recoveries and the precision between the MS/MSD for batch 99693 were outside control limits due to the non-homogenous nature of the sample—see attached chromatograms and Case Narrative. The associated laboratory control sample (LCS) and matrix spike (MS) recoveries met acceptance criteria.</p> <p>The matrix spike / matrix spike duplicate (MS/MSD) for batch 99685 could not be recovered due to sample matrix interferences which required sample dilution.</p>
4	All of the SDLs in samples 600-68567-3, 4, 5, 10, 11 and 12 were elevated due to the nature of the sample matrix and/or the high concentration of target analytes.

ER# = Exception Report identification number (an Exception Report should be completed for an item if “NR” or “No” is checked on the LRC)

Receipt

The samples were received on 2/13/2013 4:58 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.3° C.

Metals

Method(s) 6010B: The following sample(s) required filtration to reduce matrix interferences: (600-68567-1 DU), (600-68567-1 MS), (600-68567-1 MSD), SO-1620-IM-CPT-11-13 (10-12.5)-20130212 (600-68567-1), SO-1620-IM-CPT-12-13 (15-15.9)-20130213 (600-68567-9), SO-1620-IM-CPT-12-13 (2.5-5)-20130213 (600-68567-7), SO-1620-IM-CPT-12-13 (5-7.5)-20130213 (600-68567-8), SO-1620-IM-CPT-13-13 (1.5-2.5)-20130213 (600-68567-4), SO-1620-IM-CPT-13-13 (15-17.2)-20130213 (600-68567-6), SO-1620-IM-CPT-13-13 (5-7.5)-20130213 (600-68567-5), SO-1620-IM-CPT-16-13 (1.9-5)-20130213 (600-68567-10), SO-1620-IM-CPT-16-13 (10-12.5)-20130213 (600-68567-11), SO-1620-IM-CPT-16-13 (15-17.5)-20130213 (600-68567-12), SO-1620-IM-CPT-Dup1-13-20130212 (600-68567-2).

Organic Prep

Method(s) 3550B: Due to the matrix, the following sample(s) could not be concentrated to the final method required volume: SO-1620-IM-CPT-12-13 (2.5-5)-20130213 (600-68567-7). The SDLs are elevated proportionately.

Method(s) 3550B: The final extract for the MSD was much darker (black) than that of the initial sample and the MS (light yellow). There is a possibility that some creosote and/or tar was inadvertently added from the soil jar for the MSD, causing it's difference in color.

ER #¹	DESCRIPTION
1	Methylene chloride was detected above the MDL, but below the MQL in the method blank for batch 600-99676. This analyte is a recognized potential laboratory contaminant. The level of detection is below the recommended reporting limit and the appropriate flags have been applied to the report.
2	The laboratory selected samples from other groups to perform as the MS/MSDs.
3	All of the SDLs were elevated in samples 600-68626-4, 5 and 6 due to the nature of the sample matrix and/or the high concentration of target analytes.

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 02/26/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number 600-68626
Reviewer Name: JOH	Prep Batch Number(s): 600-99693 - SV
ER #¹	DESCRIPTION
1	Six surrogates are used for this analysis. The laboratory's SOP allows one base and one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Sample 600-68626-10 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified. Due to the level of dilution required for samples 600-68626-1, 2, 4, 4DL 5, 6, 7, 8, and 9; surrogate recoveries are not reported.
2	The laboratory selected a sample from another group to perform as the MS/MSD.
3	All of the SDLs in samples 600-68626-1, 2, 4, 5, 6, 7, 8, 9 and 10 were elevated due to the high concentration of target analytes and/or the nature of the sample matrix.

ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on the LRC)

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	TestAmerica, Inc. – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Soil sample results in data package: 600-69910
Sample Collection Date(s):	March 12, 2013
Intended Use of Data:	To monitor the COCs in soil at the site and to evaluate whether migration of Chemicals of Concern (COC) could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

Soil samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Table 3.

2.0 Laboratory Qualifications

Analytical services were provided by TestAmerica, Inc. (TA) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704223-10-6-TX at the time the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits were sought.

3.2 Sampling/Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks are submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples are kept in the same environment in which the field samples are collected. There are no trip blanks associated with this event.
- Field and equipment blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures. There are no field or equipment blanks associated with this event.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and relative percent differences (RPDs) established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the soil field duplicates is 50 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated (J) on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

Most Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL). DCS results for pentachlorophenol and 4-nitrophenol were not provided.

4.3 Preservation and Holding Times

Samples were properly preserved in the field and placed on ice. Samples were shipped with chains of custody, and the paperwork was filled out properly. The samples were delivered to the laboratory on the same day as collection. Because of this, they did not have enough time to reach proper preservation temperature. However, qualification of the sample results was not necessary. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. Most of the laboratory blank results were reported as ND (not detected). Table 4 presents the sample results that were qualified due to laboratory contamination as reflected in the method blanks.

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. Most surrogate recoveries and all internal standard areas and retention limits were within the acceptance limits. Each individual surrogate compound is expected to meet the laboratory control limits with the exception of semi-volatile organic compound (SVOC) analyses. According to TRRP-13 for SVOC analyses, up to one outlying surrogate in the base/neutral or acid fractions is acceptable as long as the recovery is at least 10 percent. Table 5 presents the sample results that were qualified or rejected due to outlying surrogate recoveries.

4.8 Laboratory Control Samples (LCS)

LCS data for all COCs were reported for each batch. LCS spike recoveries for all COCs were within the project objectives.

4.9 Matrix Spikes and Laboratory Duplicates

Matrix spike/matrix spike duplicates (MS/MSD) were prepared and analyzed with all batches for all requested parameters. The results are reported in the data package on a laboratory batch basis.

Most MS/MSD recoveries and RPDs met acceptance criteria. Table 6 presents the sample results that were qualified or rejected due to outlying MS/MSD recoveries and RPDs.

For metals analyses, analytical precision is evaluated based on the analysis of laboratory duplicate samples. Duplicate samples were prepared and analyzed by the laboratory as specified in Table 1.

Most duplicate analyses performed were acceptable. Table 7 presents the sample results that were qualified due to outlying duplicate results.

4.10 Field Duplicate

Field duplicate samples were collected and analyzed for the target analytes as outlined in Table 1.

Most RPDs were < 50% for soil sample results greater than 5 times the MQL indicating acceptable precision above the estimated regions of detection. Table 8 presents the sample results that were qualified due to variability in the field duplicate results.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected soil samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 Summary

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted with the exception of the following:

- TCLP semi-volatile acid compound non-detect data were rejected in sample SO-1620-SB08 (2.25-4.5)-2013031 due to surrogate recovery failure.

ER #¹	DESCRIPTION
1	See Case Narrative.
2	Arsenic was detected above the MDL, but below the MQL in the leachate blank for batch 101670. The level of detection is below the recommended reporting limit and the appropriate flags have been applied.
3	The arsenic recoveries in samples 69911-8 MS and MSD were below acceptance limits due to matrix interference. The lead recoveries in samples 69911-8 MS and MSD were outside acceptance limits, but were not flagged due to the background sample result being greater than four times the spike added concentration. Method performance is demonstrated by acceptable LCS recoveries.
4	The lead RPD between samples 69911-8 MS and MSD was above acceptance limits due to the non-homogenous nature of the samples.
5	The arsenic RPD between samples 69911-8 and 69911-8 MD was above acceptance limits due to the non-homogenous nature of the samples.
6	The lead SDL was elevated in sample 69910-12 to bring the concentration within the linear range of the instrument.
7	Arsenic was detected above the MDL in the ICB analyzed on 03/18/13 in batch 101898 and the CCBs analyzed at 14:01, 14:52, 15:38 and 16:24. Since the concentrations were below the MQL, no corrective action was required.

2	<p>The 2-Fluorophenol surrogate recovery for the following sample was outside control limits: SO-1620-SB08(2.25-4.5)-20130312 (600-69910-4). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.</p> <p>Due to the level of dilution required for samples 600-69910-1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 and 12; surrogate recoveries are not reported.</p> <p>Six surrogates are used for this analysis. The laboratory's SOP allows one base one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The associated laboratory control sample (LCS) contained an allowable number of surrogate compounds outside limits (Phenol-d6). These results have been reported and qualified.</p>
3	The laboratory selected samples from other groups to perform as the MS/MSDs.
4	All of the SDLs in samples 600-69910-1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, and 12 were elevated due to the nature of the sample matrix and/or the high concentration of target analytes.

2	The surrogate recoveries for the following samples were outside control limits: 600-69910-6, 10, and 12. Evidence of matrix interference is present; therefore, re-extraction and re-analysis were not performed. Due to the level of dilution required for the following samples, surrogate recoveries are not reported: 69910-4 and 5.
3	The matrix spike / matrix spike duplicate (MS/MSD) recoveries associated with batch 101545 were outside control limits: (600-69910-8 MS), (600-69910-8 MSD). Matrix interference is suspected.
4	All of the SDLs were elevated in samples 600-69910-2, 4 and 5 due to the high concentration of target ranges.

Receipt

The samples were received on 3/12/2013 6:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 7.4° C and 13.4° C.

Except:

The samples were received at the laboratory outside the required temperature criteria: . The samples are considered acceptable since they were collected and submitted to the laboratory on the same day and there is evidence that the chilling process had begun.

Metals

Method(s) 6010B: The following sample(s) required filtration to reduce matrix interferences: (600-69910-8 DU), (600-69910-8 MS), (600-69910-8 MSD), SO-1620-DUP-20130312 (600-69910-12), SO-1620-SB01(4-5)-20130312 (600-69910-11), SO-1620-SB02(3-5)-20130312 (600-69910-10), SO-1620-SB03(3-5)-20130312 (600-69910-9), SO-1620-SB04(3.5-5)-20130312 (600-69910-8), SO-1620-SB05(1-4)-20130312 (600-69910-7), SO-1620-SB06(2-4)-20130312 (600-69910-6), SO-1620-SB07(3-5)-20130312 (600-69910-5), SO-1620-SB08(2.25-4.5)-20130312 (600-69910-4), SO-1620-SB09((1-4)-20130312 (600-69910-3), SO-1620-SB11(2.5-4)-20130312 (600-69910-2), SO-1620-SB12(2-4)-20130312 (600-69910-1).

GC/MS VOA

Qualifier	Qualifier Description
U	Analyte was not detected at or above the SDL.
J	Result is less than the MQL but greater than or equal to the SDL and the concentration is an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Analyte was not detected at or above the SDL.
X	Surrogate is outside control limits
J	Result is less than the MQL but greater than or equal to the SDL and the concentration is an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
U	Analyte was not detected at or above the SDL.
X	Surrogate is outside control limits
J	Result is less than the MQL but greater than or equal to the SDL and the concentration is an estimated value.

Data Usability Summary

Reviewer:	Chris G. Knight - Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	TestAmerica - Houston, Texas
Project/Area of Interest:	1620 - Wood Preserving Works
Description of Data Packages Reviewed:	Groundwater sample results in TestAmerica data package: J77098, J77257, J22524, and J77584
Sample Collection Date:	July - August 2013
Intended Use of Data:	<i>To determine the concentrations of chemicals of concern (COCs) in the groundwater samples at the site.</i>

1.0 Scope of Data Usability Summary

Data was reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and laboratory quality assurance/quality control (QA/QC) samples. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

Groundwater samples and associated field quality control samples were collected at the UPRR-1620 Wood Preserving Works Site in Houston, Texas and submitted for analysis. A sampling and analysis summary is presented in Table 1. The TestAmerica data packages, including the LRC and any associated exception reports, are presented in Appendix B. The data packages include sample identification cross-reference lists. Each sample is assigned a unique field identification number.

2.0 Laboratory Qualifications

Analytical services were provided by TestAmerica located in Houston, Texas. This laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). TestAmerica held NELAP Certification Number TX (T104704223-10-6-TX) at the time that the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

LORP for COC are intended to ensure laboratory detection limits are below protective concentration levels (PCL). Prior to sampling, the LORP for each organic COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits were sought.

3.2 Sampling/ Analytical QA/QC Objectives

The QA/QC program was designed to identify contamination resulting from sample collection, sample transport and the analytical process.

- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.
- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Field blanks are sample containers filled in the field with analyte-free water, which evaluates any ambient contamination that may be present during sampling.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, laboratory control samples (LCS) were prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, matrix spike/matrix spike duplicates (MS/MSD) or laboratory duplicates are prepared and analyzed with each batch. The recovery ranges and relative percent differences (RPDs) established by the laboratory are adopted as the acceptance criteria for the project.

4.0 Data Review/Validation Results

4.1 Analytical Results

A summary of the analytical results with qualifiers is reported in Table 3. Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQLs) have been qualified as estimated on the analytical table per the TRRP-13 document and also in the attached copies of the laboratory data packages.

4.2 Preservation and Holding Times

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

Most samples were prepared and analyzed within the required holding times. Two semi-volatile organic compounds (SVOCs) samples were extracted outside of established holding time and were qualified as estimated (see Table 4).

4.3 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the United States Environmental Protection Agency (USEPA) *Specifications and Guidance for Contaminant-free Sample Containers*.

4.4 Calibrations

According to the LRC, initial calibration and continuing calibration data met the criteria for the selected methods.

4.5 Blanks

Method Blanks: The purpose of assessing the results of laboratory method blank analyses is to determine the existence and magnitude of sample contamination introduced during analysis. Laboratory method blanks are prepared from a certified analyte-free matrix and analyzed with the samples. For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

Most method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation. Four methylene chloride method blanks indicated laboratory contamination. All associated sample results were either non-detect or significantly greater in concentration than that detected in the method blank. No further action was required.

Trip Blanks: The trip blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. Most sample results were non-detect below the MQL. Volatile organic compounds (VOCs) were detected in the trip blanks. Samples with similar detections to those found in the trip blanks were qualified as non-detect (see Table 5). The remaining sample results were either non-detect or significantly higher than that of the trip blank. No further action was required.

Field Blanks: The field blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. Most sample results were non-detect below the MQL. SVOCs were detected in the field blanks. Samples with similar detections to those found in the field blanks were qualified as non-detect (see Table 6). The remaining sample results were either non-detect or significantly higher than that of the field blank. No further action was required.

4.6 Internal Standard and Surrogate Recoveries

Recoveries of internal standards are addressed in the LRC of the data packages. All internal standard results associated with the compounds of interest were acceptable per the LRC.

Most surrogate recoveries were acceptable, indicating good analytical efficiency. Sample results associated with outlying recoveries were qualified as estimated (see Table 7).

4.7 Laboratory Control Samples (LCS)

LCS analyses serve as a monitor of the overall performance of all steps in the analysis, including the sample preparation. LCS were analyzed using the same sample preparation, analytical methods, and QA/QC procedures employed for the investigative samples. The laboratory prepared some LCS in duplicate to assess analytical precision. The laboratory established the organic LCS control limits internally.

Most LCS recoveries and RPDs were within the established control limits, indicating acceptable overall laboratory performance. Some high recoveries and RPDs were reported: all associated sample results were non-detect and were not impacted by the indicated high bias and variability.

4.8 Matrix Spike/Matrix Spike Duplicates (MS/MSD)

To evaluate the effects of sample matrices on the preparation, measurement procedures, and accuracy of a particular analysis, samples are spiked in duplicate with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision. The laboratory established the organic MS/MSD control limits internally.

The laboratory performed site-specific MS/MSD analyses internally. Spike recoveries were not assessed for samples having original concentrations significantly greater than the spike concentration (>four times).

Most recoveries and RPDs were acceptable, demonstrating good analytical accuracy and precision. Some high recoveries and RPDs were reported: all associated sample results were non-detect and were not impacted by the indicated high bias and variability. A low SVOC MS recovery was reported for one batch. The sample result for this compound was non-detect and rejected because the MS recovery was less than ten percent (see Table 8).

4.9 Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, four field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than thirty percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is one time the RL value for water samples.

Most field duplicate results were within acceptable agreement, demonstrating good sampling and analytical precision. Two of the field duplicates sets showed some SVOC variability. The associated results were qualified as estimated (see Table 9).

4.10 Field Procedures

Pastor, Behling & Wheeling (PB&W) collected the samples in accordance with their Standard Operating Procedures (SOP) for groundwater sample collection.

4.11 Summary

Based on this assessment, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision based on the provided information and may be used with the specific exception and qualifications noted.

Laboratory Name: TestAmerica-Houston	LRC Date: 08/13/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number: 600-77198
Reviewer Name: YX	Prep Batch Number: 600-112231, 112263, 112551 and 112681-VOA
ER #¹	DESCRIPTION
1	Surrogate recovery for the following sample(s) was outside control limits: (600-77198-20 MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.
2	Methylene chloride was detected above the MQL in the method blank for batch 600-112263. This analyte is a recognized potential laboratory contaminant and the appropriate flags have been applied to the report.
3	The matrix spike / matrix spike duplicate (MS/MSD) precision associated with batch 600-112263 was outside control limits for vinyl chloride and toluene. Since the recoveries were within acceptance limits and matrix interference is suspected, no corrective action was required.
4	All of the SDLs in samples 600-77198-1, 2, 3, 5, 6, 12, 13, 15, 16 and 17 were elevated due to the high concentration of target analytes and/or the nature of the sample matrix.

ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on the LRC)

Laboratory Name: TestAmerica-Houston	LRC Date: 08/20/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number: 600-77198
Reviewer Name: TTD	Prep Batch Number(s): 600-112345-SV
ER #¹	DESCRIPTION
1	<p>The surrogate recoveries were biased low for Phenol-d5 in samples 600-77198-7DL, 9DL and 11. The surrogate recoveries were biased low for Phenol-d5 and 2-Fluorophenol in sample 600-77198-19. Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.</p> <p>Due to the high dilution required for samples 600-77198-1, 1DL, 2, 2DL, 3, 3DL, 3DL2, 5, 5DL, 6, 6DL, 7DL2, 9DL2, 12, 12DL, 13, 13DL, 13DL2, 14DL, 15, 15DL, 15DL2, 16, 16DL, 17 and 17DL; surrogate recoveries were not reported or have low recoveries.</p>
2	The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 112345 were outside control limits. The associated laboratory control sample (LCS) met acceptance criteria.
3	<p>All of the SDLs in samples 600-77198-1, 2, 3, 5, 6, 12, 13, 15, 16 and 17 were elevated due to the high concentration of target analytes and/or the nature of the sample matrix.</p> <p>The Acenaphthene, Dibenzofuran, Fluorene, Phenanthrene, and Naphthalene SDLs were elevated in sample 600-77198-7 due to the high concentration of these analytes.</p> <p>The Acenaphthene SDL was elevated in sample 600-77198-8 due to the high concentration of this analyte.</p> <p>Various SDLs were elevated in sample 600-77198-9 due to the high concentrations of these analytes.</p> <p>The Phenol SDL was elevated in sample 600-77198-14 due to the high concentration of this analyte.</p>
4	The continuing calibration verifications (CCVs) for analytical batches 112642, 112724, 112762 and 113058 were biased low for 4,6-Dinitro-2-methylphenol (-72.7%) , (-52.3%) , (-64.2%) and (-56.6%). The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been qualified and reported.

ER #¹	DESCRIPTION
1	The laboratory control sample (LCS) for batch 112502 recovered outside control limits for the following analyte: 1,2-dichloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.
2	The methylene chloride recovery in the matrix spike (MS) for batch 112405 was below the acceptance limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.
3	All of the SDLs were elevated in samples: WG-1620-MW40B-20130731 (600-77257-5), WG-1620-MW49-A-20130801 (600-77257-12), and WG-1620-MW49B-20130801 (600-77257-13) due to the dilutions necessary for analysis.

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 08/20/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number: 600-77257
Reviewer Name: TTD	Prep Batch Number(s): 600-112538/113163/113428-SV
ER #¹	DESCRIPTION
1	<p>Sample 600-77257-9 was inadvertently spiked for target analytes. The sample was re-prepped outside analytical holding time.</p> <p>Re-extraction and reanalysis of the following sample 600-77257-17 was performed outside of the analytical holding time due to surrogate failure of original extraction. The re-extraction and re-analysis surrogate recoveries were all within QC limits.</p>
2	<p>Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The LCSD for batch 113163 was biased high for 2,4,6-Tribromophenol. The associated MB, LCS, and sample surrogates fell within acceptance criteria; therefore, the data have been reported.</p> <p>The surrogate recovery was biased low for Phenol-d5 in the following samples 600-77257-16 due to sample matrix.</p> <p>Due to the high dilution required for the following samples 600-77257- 3DL, 5, 5DL, 12, 12DL, 13 and 13DL, surrogate recoveries were not reported.</p>
3	<p>The laboratory control sample (LCS) for batch 113163 recovered outside control limits for the following analyte: 4-Nitrophenol. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.</p> <p>The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 113428 recovered outside control limits for the following analytes: 1,2-Diphenylhydrazine.</p>
4	<p>All the SDLs in samples 600-77257-5, 12 and 13 were elevated due to the nature of the sample matrix.</p> <p>Various SDLs were elevated in samples 600-77257-3DL and 4DL due to the high concentration of these analytes.</p>
5	<p>The continuing calibration verification (CCV) for analytical batch 113129 recovered outside control limits for 4,6-Dinitro-2-methylphenol (-61.7). The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been qualified and reported.</p> <p>The continuing calibration verification (CCV) for analytical batch 113153 was biased low for 4,6-Dinitro-2-methylphenol (-56.1). The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been qualified and reported.</p> <p>The continuing calibration verification (CCV) for analytical batch 113230 recovered outside control limits for 4,6-Dinitro-2-methylphenol (-58.5). The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been qualified and reported.</p>

Comments

The report was revised on 09/09/13 to reflect a sample ID change requested by the client, see attached letter with the Chain of Custody.

Receipt

The samples were received on 8/2/2013 11:51 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 2.7° C, 3.6° C, 4.4° C, 4.6° C and 5.7° C.

Hi Cathy,

There are a few changes that need to be made to these two reports. The first, 600-77584-1 has MW38A duplicated, but the lab sample with ID 600-77584-9 should read MW38B. The second is in report 600-77257-1. Lab sample with ID 600-77257-4 should read TW41B instead of TW41A. Please let me know if you have any questions.

Thanks,
Patrick

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 08/21/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number: 600-77524
Reviewer Name: TTD	Prep Batch Number(s): 600-112861/112992/113428-SV
ER #¹	DESCRIPTION
1	See Case Narrative.
2	Re-extraction and reanalysis of the following sample 600-77524-2 was performed outside of the analytical holding time due to surrogate failure during the original extraction. In the re-extraction and re-analysis, surrogates recovered within limits with the exception of Phenol-d5. It was biased low.
3	<p>Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The matrix spike (MS) for batch 112992 was biased low for Phenol-d5 and Nitrobenzene-d5. These results have been reported and qualified.</p> <p>The surrogate recoveries were biased low for Phenol-d5 in the following samples 600-77524-2, 13DL, 17, 20, 21DL, and 25DL due to sample matrix.</p> <p>The surrogate recoveries were biased low for Phenol-d5 and 2-Fluorophenol in the following sample 600-77524-23 due to sample matrix.</p> <p>Due to the high dilution required for the following samples 600-77524- 1DL, 13DL2, 15, 15DL, 22 and 22DL, surrogate recoveries were not reported.</p>
4	The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 113428 recovered outside control limits for the following analytes: 1,2-Diphenylhydrazine.
5	<p>The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 112861 was outside control limits for 4,6-Dinitro-2-methylphenol.</p> <p>The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision several analytes for batch 112992 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.</p>
6	<p>All the SDLs in samples 600-77254-1, 15 and 22 were elevated due to the nature of the sample matrix.</p> <p>Various SDLs were elevated in samples 600-77524-1DL, 13DL, 15DL, 21DL, 22DL and 25DL due to the high concentration of these analytes.</p>
7	The continuing calibration verification (CCV) was biased low for 4,6-Dinitro-2-methylphenol (-56.6) in analytical batch 113058, 4,6-Dinitro-2-methylphenol (-61.7) in analytical batch 113129, and 4,6-Dinitro-2-methylphenol (-58.5) in analytical batch 113230. The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been qualified and reported.

Reviewer Name: YX	Prep Batch Number: 600-113144, 113250, 113520, 113533 and 113710-VOA
ER #¹	DESCRIPTION
1	1,2-Dichloroethane D4 recovery for the following sample(s) was outside control limits high: WG-1620-MW68B-20130808 (600-77584-6). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.
2	Methylene chloride was detected above the MDL, but below the MQL in the method blanks for batches 600-113520, 113533 and 113710. The level of detection is below the recommended reporting limits and the appropriate flags have been applied to the report.
3	The matrix spike / matrix spike duplicate (MS/MSD) recoveries associated with batch 600-113250 were outside control limits. Matrix interference is suspected.
4	Benzene and Xylene, Total SDLs were elevated in sample 600-77584-1 due to the high concentration of these analytes. Benzene Ethylbenzene and Xylene, Total SDLs were elevated in samples 600-77584-3 and 4 due to the high concentration of these analytes. All of the SDLs in samples 600-77584-6 and 15 were elevated due to sample matrix.

ER #¹	DESCRIPTION
1	See Case Narrative.
2	<p>Six surrogates are used for this analysis. The laboratory's SOP allows one base and one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The surrogate recoveries for Nitrobenzene-d5 in samples 600-77584-5 and 600-77584-10 were biased low. The surrogate recovery for 2,4,6-Tribromophenol in sample 600-77584-17 was biased low. The surrogate recovery for 2,4,6-Tribromophenol in the associated LCSD was biased high. These results have been reported and qualified.</p> <p>Three surrogate compounds, 2,4,6-Tribromophenol, Phenol-d5 and 2-Fluorophenol, were biased low in the following sample 600-77584-12. There was insufficient sample remaining to perform re-extraction and/or re-analysis; therefore, the data have been reported and qualified.</p> <p>Two base surrogate compounds, 2-Fluorobiphenyl and Nitrobenzene-d5, were biased low for sample 600-77584-16. There was insufficient sample remaining to perform re-extraction and/or re-analysis; therefore, the data have been reported and qualified.</p> <p>Due to the high dilution required for samples 600-77584- 1, 3, 4, 6, and 15; surrogate recoveries are not reported.</p>
3	The laboratory control sample (LCS) for prep batch 113163 recovered outside control limits for 4-Nitrophenol. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.
4	The laboratory selected samples from other groups to perform as the MS/MSDs.
5	Various SDLs were elevated in samples 600-77524-1, 13, 15, 22 and 25 due to sample matrix or the high concentration of those analytes.
6	The continuing calibration verification (CCV) was biased low for 4,6-Dinitro-2-methylphenol (-56.6%) for analytical batch, 4,6-Dinitro-2-methylphenol (-61.7%) for analytical batch 113129, and 4,6-Dinitro-2-methylphenol (-58.5%) for analytical batch 113230. The SOP makes allowance for up to four non-CCC analytes to have a %drift greater than the acceptable limit. The data have been reported.
