ER# ⁵	Description
1	<p>Low-Level Semivolatile Organics: Surrogate recoveries were diluted out in the higher dilutions in several samples, but were in control in the lower dilutions.</p> <p>Low-Level Semivolatile Organics: The recoveries of the surrogate 2-fluorobiphenyl were below the control limits in sample WG-1620-MW68B-20120216 and WG-1620-MW35B-20120215. Also, the recovery of the surrogate nitrobenzene-d5 was below the control limits in sample WG-1620-MW35B-20120215. The surrogate recoveries were in control in one of the higher dilutions.</p>
2	<p>Batch 58983, Low-Level Semivolatile Organics, Sample WG-1620-MW65D-20120214: MS recoveries were marginally below the control limits for 2-chloronaphthalene and 2-methylnaphthalene. The associated MSD and LCS recoveries were within the control limits.</p> <p>Batch 58985, Low-Level Semivolatile Organics, Sample WG-1620-MW65D-20120214: MS/ MSD recoveries were below the control limits for 2-methylnaphthalene. The associated LCS recovery and MS/MSD RPD were within the control limits.</p>
3	<p>Batch 58983, Low-Level Semivolatile Organics, Sample WG-1620-MW65D-20120214: MS/MSD RPD was above the control limits for several target compounds.</p>
4	<p>Bis(2-ethylhexyl)phthalate was detected in samples WG-1620-FB06-20120214 and WG-1620-FB08-20120216 at concentrations that are above the MQL. This compound was non-detect in the associated method blanks. A recent inquiry from the supplier of sample containers revealed that the bottles are certified to 2.5 ug/L which is above the result for these samples. ALS confirmed the MDL for this compound by analysis of the DCS.</p> <p>Naphthalene was detected in samples WG-1620-FB06-20120214 and WG-1620-FB08-20120216 at concentrations that are marginally above the MQL. This compound was non-detect in the associated method blanks.</p>
5	<p>Low-Level Semivolatile Organics, Sample WG-1620-MW57B-20120215 could not be analyzed at a lower dilution due to sample matrix.</p>

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	ALS Laboratory Group – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Groundwater sample results in data packages: 1207587, 1207818, 1207933, 12071122, 12071247, 12071248, & 12071310
Sample Collection Date(s):	July 11-27, 2012
Intended Use of Data:	To monitor the COCs in groundwater at the site and to evaluate whether migration of Chemicals of Concern (COC) could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

106 groundwater samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Table 3.

2.0 Laboratory Qualifications

Analytical services were provided by ALS Laboratory Group (ALS) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number TX: T104704231-12-10 at the time the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits that are at or below the

Texas Risk Reduction Tier 1 Residential Protective Concentration Levels (PCLs), ^{GW} _{ING} for groundwater were sought.

3.2 Sampling/ Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Field and equipment blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and relative percent differences (RPDs) established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the water field duplicates is 30 percent. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

Most Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL).

4.3 Preservation and Holding Times

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. All of the laboratory blank results were reported as ND (not detected).

Trip Blanks: The trip blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. All of the trip blank results were reported as ND (not detected).

Field Blanks and Equipment Blanks: The field and equipment blanks, which were discrete samples handled in the field, are listed on the sample identification cross-reference table found in the laboratory data packages. Results are reported in the data package with the other project sample results. Sample results with analyte concentrations similar to those found in the blanks were qualified as non-detect (see Table 4).

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. All surrogate recoveries were within the acceptance limits.

All internal standard areas and retention limits were acceptable per the LRCs with the exception of sample WG-1620-MW18A-20120711. All internal Standard recoveries were below the control limits. Table 5 presents the sample results that were qualified due to outlying internal standard recoveries.

4.8 Laboratory Control Samples (LCS)/ Laboratory Control Sample Duplicates (LCSD)

LCS or LCS/LCSD data for all COCs were reported for each batch. LCS spike recoveries and RPDs for all COCs were within the project objectives with the exception of the sample results presented with qualifiers in Table 6.

4.9 Matrix Spikes

Matrix spike/matrix spike duplicates were prepared and analyzed with most batches for all requested parameters. The results are reported in the data package on a laboratory batch basis. For some semivolatile organic compound (SVOC) and volatile organic compound (VOC) batches, insufficient sample was available for MS/MSD analyses. In these cases, analyses of LCS/LCSD were used to determine batch precision and accuracy for VOCs and SVOCs.

All recoveries and RPD met criteria with the exception of the sample results presented with qualifiers in Table 7.

The laboratory also performed MS/MSD on unrelated samples from other projects. The data for these unrelated samples cannot be used to assess accuracy and precision for the associated project samples.

4.10 Field Duplicate

Field duplicate samples were collected and analyzed for the target analytes as outlined in Table 1.

All RPDs were < 30% for sample results greater than 5 times the MQL indicating acceptable precision above the estimated regions of detection with the exception of the sample results presented with qualifiers in Table 8.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 Summary

The analytical data in this report are usable to assess the impact of COCs in groundwater at the site with the qualification noted herein.

For most of the samples, the surrogate recoveries were in control in at least one dilution.	
2	Batch R131336, Volatile Organics, Sample 1207628-10: MS/MSD is for an unrelated sample. Batch R131395, Volatile Organics, Sample 1207628-10: MS/MSD is for an unrelated sample.

4	Semi- volatile Organics: Due to sample matrices, the following samples could not be analyzed at a one- fold dilution: WG-1620-MW72B-20120712, WG-1620-MW23C-20120712 and WG-1620-MW55B-20120712. Volatile Organics: Due to sample matrices, the samples could not be analyzed at a lower dilution. Target semi-volatile compounds were detected in the field blanks at concentrations that exceed the MQLs. However, all target compounds were non-detect in the associated method blank.	
5	Batch R131395, Volatile Organics: CCV %Ds were above the control limits for 4-bromofluorobenzene and toluene-d8. The associated LCS recoveries were within the control limits.	
6	Semi- volatile Organics: All internal standard recoveries were below the control limits for sample WG-1620-MW18A-20120711. Reanalysis confirms matrix interference.

1	Surrogates were diluted out in the higher dilutions for several samples for semi-volatile organics. Except for 2,4,6-tribromophenol in sample WG-1620-MW33BR-20120717, surrogate recoveries were in control in the lowest dilutions.	
2	Batch 62746, Semi-volatile Organics: LCS/LCSD RPD was above the control limits for nitrobenzene. The individual recoveries were in control.	
3	Batch 62746, Semi-volatile Organics , Sample WG-1620-MW67B-20120717 : MS recoveries for 2,6-dinitrotoluene, 2-chloronaphthalene and bis(2-chloroethoxy)methane and MSD recovery for 2,6-dinitrotoluene were below the control limits. The associated LCS recoveries and MS/MSD RPDs were within the control limits. Batch R131757, Volatile Organics, Sample WG-1620-MW68B-20120716 : MS/MSD recovery was below the control limits for benzene. The associated LCS recovery and MS/MSD RPD were within the control limits.	
4	Batch 62745, Semi-volatile Organics, Sample WG-1620-MW13-20120716 : MS/MSD RPDs were above the control limits for several target compounds.	
5	Naphthalene was detected at a concentration that is above the control limits in sample WG-1620-FB3-20120716, but this compound was non-detect in the associated method blank.

ER# ⁵	Description	
1	Semivolatile surrogates were diluted out in the higher dilutions or surrogate recoveries were high for several samples. The surrogate recoveries were in control in the lower dilutions.	
2	Batch 62921, Semivolatile Organics, Sample WG-1620-MW65D-20120723: MS/MSD RPDs were above the control limits for 1,2-diphenylhydrazine, 4,6-dinitro-2-methylphenol and N-nitrosodiphenylamine. All MS/MSD recoveries were in control.	
3	Naphthalene was reported at concentrations that exceeds the MQL in WG-1620-FB7-20120723 and WG-1620-FB8-20120724, but was non-detect in the associated method blanks. Bis(2-ethylhexyl)phthalate was also reported at a concentration that was above the MQL in sample WG-1620-FB8-20120724. This compound was non-detect in the associated method blank, and the MQL is lower than the certified level of cleanliness for the amber bottles used to collect the samples.	
4	Batch R132072, Volatile Organics: CCV %D was above the control limits for vinyl chloride. The associated sample results are non-detect.

Data Usability Summary

Reviewer:	Chris G. Knight - Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	TestAmerica - Houston, Texas
Project/Area of Interest:	1620 - Wood Preserving Works
Description of Data Packages Reviewed:	Groundwater sample results in data packages: J67921, J68031, J68161, J68241, J68350, J68442, & J68500
Sample Collection Date:	January and February 2013
Intended Use of Data:	<i>To determine the concentrations of chemicals of concern (COCs) in the groundwater samples at the site.</i>

1.0 Scope of Data Usability Summary

Data was reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and laboratory quality assurance/quality control (QA/QC) samples. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

Groundwater samples and associated field quality control samples were collected at the UPRR - 1620 Wood Preserving Works Site in Houston, Texas and submitted for analysis. A sampling and analysis summary is presented in Table 1. The TestAmerica data packages, including the LRC and any associated exception reports, are presented in Appendix B. The data packages include sample identification cross-reference lists. Each sample is assigned a unique field identification number.

2.0 Laboratory Qualifications

Analytical services were provided by TestAmerica located in Houston, Texas. This laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). TestAmerica held NELAP Certification Number TX (T104704223-10-6-TX) at the time that the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

LORP for COCs are intended to ensure laboratory detection limits are below protective concentration levels (PCL). Prior to sampling, the LORP for each organic COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits were sought.

3.2 Sampling/Analytical QA/QC Objectives

The QA/QC program was designed to identify contamination resulting from sample collection, sample transport and the analytical process.

- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.
- Trip blanks evaluate contamination from sample collection, transportation, storage, and analytical activities.
- Field blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, laboratory control samples (LCS) were prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, matrix spike/matrix spike duplicates (MS/MSD) or laboratory duplicates are prepared and analyzed with each batch. The recovery ranges and relative percent differences (RPDs) established by the laboratory are adopted as the acceptance criteria for the project.

4.0 Data Review/Validation Results

4.1 Analytical Results

A summary of the analytical results with qualifiers is reported in Table 3. Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQLs) have been qualified as estimated on the analytical table per the TRRP-13 document and also in the attached copies of the laboratory data packages.

4.2 Preservation and Holding Times

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

All samples were analyzed within the required holding times.

4.3 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the United States Environmental Protection Agency (USEPA) *Specifications and Guidance for Contaminant-free Sample Containers*.

4.4 Calibrations

According to the LRC, initial calibration and continuing calibration data met the criteria for the selected methods.

4.5 Blanks

Method Blanks: The purpose of assessing the results of laboratory method blank analyses is to determine the existence and magnitude of sample contamination introduced during analysis. Laboratory method blanks are prepared from a certified analyte-free matrix and analyzed with the samples. For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

Most method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation. Several method blanks indicated laboratory contamination. Samples with similar detections to those found in the method blanks were qualified as non-detect (see Table 4).

Trip Blank:

To evaluate contamination from sample collection, transportation, storage, and analytical activities, seven trip blanks were collected and submitted to the laboratory for volatile organic compound (VOC) analysis.

All results were non-detect for the compounds of interest.

Field Blanks: To assess field decontamination procedures, nine equipment blanks were submitted for analysis, as identified in Table 1.

Most results were non-detect for the analyte of interest. Samples with similar detections to those found in the trip blanks were qualified as non-detect (see Table 5).

4.6 Internal Standard and Surrogate Recoveries

Recoveries of internal standards are addressed in the LRC of the data packages. All internal standard results associated with the compounds of interest were acceptable per the LRC.

Most surrogate recoveries were acceptable, indicating good analytical efficiency. Sample results associated with surrogate recoveries less than ten percent were rejected (see Table 6).

4.7 Laboratory Control Samples (LCS)

LCS analyses serve as a monitor of the overall performance of all steps in the analysis, including the sample preparation. LCS were analyzed using the same sample preparation, analytical methods, and QA/QC procedures employed for the investigative samples.

All LCS recoveries were within the established control limits, indicating acceptable overall laboratory performance.

4.8 Matrix Spike/Matrix Spike Duplicates (MS/MSD)

To evaluate the effects of sample matrices on the preparation, measurement procedures, and accuracy of a particular analysis, samples are spiked in duplicate with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision. The laboratory established the organic MS/MSD control limits internally.

The laboratory performed site-specific MS/MSD analyses internally. Spike recoveries were not assessed for samples having original concentrations significantly greater than the spike concentration (>four times).

Most recoveries and RPDs were acceptable, demonstrating good analytical accuracy and precision. Associated sample results were qualified as estimated or rejected (see Table 7).

4.9 Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, four field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than thirty percent for water samples. If the reported concentration in either the investigative sample or its duplicate

is less than five times the reporting limit (RL), the evaluation criteria is one time the RL value for water samples.

Most field duplicate results were within acceptable agreement, demonstrating good sampling and analytical precision. Several semi-volatile organic compounds (SVOC) results did show some variability. All detections results were qualified as estimated (see Table 8).

4.10 Field Procedures

Pastor, Behling & Wheeling (PB&W) collected the samples in accordance with their Standard Operating Procedures (SOP) for groundwater sample collection.

4.11 Summary

Based on this assessment, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision based on the provided information and may be used with the qualifications noted with the exception of the following:

- SVOC data were rejected in a number of samples due to surrogate recoveries less than ten percent.
- SVOC data were rejected in a number of samples due MS/MSD recoveries less than ten percent.

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 02/19/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number 600-67921
Reviewer Name: JOH	Prep Batch Number(s): 600-98988 - SV
ER #¹	DESCRIPTION
1	Due to the level of dilution required for samples 600-67921-1, 1MS/MSD, 1DL, 3DL, 4DL2, 5, 5DL, 6DL, 7DL, 8, 8DL, and 8DL2, surrogate recoveries are not reported.
2	Several analytes were detected above the MDL, but below the MQL in the method blank. The levels of detection are below the recommended reporting limits and the appropriate flags have been applied. 2-Methylnaphthalene was detected above the MQL in the method blank, indicating a potential high bias. The laboratory suspects that this is coming from contaminated glassware due to the high concentrations of Naphthalene compounds found in the samples. All samples except for 600-67921-10 were either 10X the amount found in the blank or non-detect for this analyte. Sample 10 was just slightly higher than that found in the blank. Due to this being more than likely a laboratory contamination and the holding times had already expired, the data have been qualified and reported. Bis(2-ethylhexyl)phthalate was detected above the MQL in the method blank. This analyte is a recognized potential laboratory contaminant and the appropriate flags have been applied.
3	The matrix spike / matrix spike duplicate (MS/MSD) could not be recovered due to sample matrix interferences which required sample dilution. The associated laboratory control sample (LCS) met acceptance criteria.
4	All of the SDLs in samples 600-67921-1, 5 and 8 were elevated due to the high concentrations of target analytes. Seven analyte SDLs in sample 600-67921-3, the Acenaphthene and Dibenzofuran SDLs in sample 600-67921-4, four analyte SDLs in sample 600-67921-6, and the Acenaphthene and Naphthalene SDLs in sample 600-67921-7 were elevated due to the high concentrations of these analytes.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Analyte was not detected at or above the SDL.
J	Result is less than the MQL but greater than or equal to the SDL and the concentration is an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Analyte was not detected at or above the SDL.
X	Surrogate is outside control limits
b	The compound was found in the blank and sample
J	Result is less than the MQL but greater than or equal to the SDL and the concentration is an estimated value.
N	MS, MSD: Spike recovery exceeds upper or lower control limits.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

ER #¹	DESCRIPTION
1	See Case Narrative.
2	Due to the level of dilution required for the following samples, surrogate recoveries are not reported: WG-1620-MW12A-20130205 (600-68161-10DL), WG-1620-MW40B-20130205 (600-68161-6, 6DL). Six surrogates are used for this analysis. The laboratory's SOP allows one base and one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Samples 600-68161-1 and 3 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.
3	The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision were outside control limits. Matrix interference is suspected. The associated laboratory control sample (LCS) met acceptance criteria
4	All of the SDLs in sample 600-68161-6 were elevated due to the high concentration of target analytes. Various SDLs in sample 600-68161-10 were elevated due to the high concentrations of these analytes.

ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on the LRC)

Reviewer Name: YX	Prep Batch Number: 600-99159, 99165, 99274 and 99295-VOA
ER #¹	DESCRIPTION
1	Chlorobenzene was detected above the MDL, but below the MQL in the method blanks for batches 600-99165 and 99295. Methylene chloride was detected above the MDL, but below the MQL in the method blank for batch 600-99274. The levels of detection are below the recommended reporting limits and the appropriate flags have been applied to the report.
2	The laboratory selected samples from other groups to perform as the MS/MSDs.
3	All of the SDLs in samples 600-68241-3, 4, 5 and 10 were elevated due to the high concentration of target analytes and the nature of the sample matrix.

ER #¹	DESCRIPTION
1	Due to the level of dilution required for samples 600-68241-3, 4, 5, 6, 7, 8, 10 and 10DL; surrogate recoveries are not reported. Six surrogates are used for this analysis. The laboratory's SOP allows one base and one acid of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Sample 600-68241-9 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.
2	Naphthalene was detected above the MDL, but below the MQL in the method blank associated with batch 99298. The level of detection is below the recommended reporting limit and the appropriate flags have been applied.
3	The laboratory selected samples from other groups to perform as the MS/MSDs.

Appendix A (cont'd): Laboratory Review Checklist: Exception Reports	
Laboratory Name: TestAmerica-Houston	LRC Date: 02/25/13
Project Name: 1620 UPRR HWPW	Laboratory Job Number 600-68350
Reviewer Name: JOH	Prep Batch Number(s): 600-99298, 99370 - SV
ER #¹	DESCRIPTION
1	<p>Due to the dilution required to get Acenaphthene within the calibration range of the instrument, the acid surrogates (PHL, 2FP) for sample 600-68350-8DL recovered below acceptance limits. Since these surrogates are not representative of this analyte and the other surrogate recoveries were within acceptance limits, the results have been reported and qualified.</p> <p>Due to the level of dilution required for samples 600-68350-5, 6DL, 7, 7DL, 9, 10, 10DL, 11 and 11DL; surrogate recoveries are not reported.</p> <p>Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. Samples 600-68350-3, 4MS, 12, 13, 14, 15, 16 and 17 contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.</p>
2	Naphthalene was detected above the MDL, but below the MQL in the method blank for batch 99298. The level of detection is below the recommended reporting limit and the appropriate flags have been applied.
3	The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision were outside control limits. Matrix interference is suspected. The associated laboratory control sample (LCS) met acceptance criteria.
4	<p>All of the SDLs in samples 600-68350-3, 5, 7, 9, 10, 11 and 13 were elevated due to the nature of the sample matrix and/or the high concentration of target analytes.</p> <p>The Naphthalene SDL in sample 600-68350-6 was elevated due to the high concentration of this analyte.</p> <p>The Acenaphthene SDL in sample 600-68350-8 was elevated due to the high concentration of this analyte.</p>

Comments

The report was revised on 03/05/13 to remove the duplicate volatile results.

Receipt

The samples were received on 2/8/2013 12:38 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.3° C, 1.7° C, 2.3° C and 2.7° C.

Organic Prep

Method(s) 3510C: Due to the matrix, the following sample(s) could not be concentrated to the final method required volume: WG-1620-MW70B-20130207 (600-68350-7). The SDLs are elevated proportionately.

ER #¹	DESCRIPTION
1	The laboratory selected samples from other groups to perform as the MS/MSDs.
2	All of the SDLs in sample 600-68442-1 were elevated due to the high concentration of target analytes and the nature of the sample matrix. The Benzene, Ethylbenzene and Total Xylenes SDLs were elevated in sample 600-68442-2 due to the high concentration of these analytes. The Ethylbenzene SDL was elevated in sample 600-68442-3 due to the high concentration of this analyte.

Project Name: 1620 UPRR HWPW	Laboratory Job Number 600-68500
Reviewer Name: JOH	Prep Batch Number(s): 600-99537 - SV
ER #¹	DESCRIPTION
1	Surrogate recoveries for sample 600-68500-8 were outside control limits. Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. The original analysis has been reported and qualified. Due to the level of dilution required for sample 600-68500-7DL, surrogate recoveries are not reported.
2	The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for sample 600-68500-5 were outside control limits. Matrix interference is suspected. The associated laboratory control sample (LCS) met acceptance criteria.
3	The Naphthalene and Acenaphthene SDLs in samples 68500-6, 7 and 12 were elevated due to the high concentrations of these analytes. All of the SDLs in sample 68500-13 were elevated due to the high concentration of target analytes and the nature of the sample matrix.

Data Usability Summary

Reviewer:	Angela Bown – Conestoga-Rovers & Associates, Inc.
Contract Laboratory:	TestAmerica, Inc. – Houston, Texas
Project/Area of Interest:	UPRR Houston Wood Preserving Works – Houston, Texas
Description of Data Packages Reviewed:	Soil and Groundwater sample results in data packages: 600-68443, 600-68489, 600-68567, 600-68626, 600-68719, 600-68753, 600-68812
Sample Collection Date(s):	February 11-15, 18-19, 2013
Intended Use of Data:	To monitor the Chemicals of Concern (COCs) in soil and groundwater at the site and to evaluate whether migration of COC could result in risk to human or ecological health.

1.0 Scope of Data Usability Summary

Data were reviewed and validated in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in *Review and Reporting of COC Concentration Data*, (RG-366/TRRP-13) and the results of the review/validation are discussed in this Data Usability Summary (DUS). The review included examination of the reported data, the laboratory review checklist (LRC), and field/laboratory quality assurance/quality control (QA/QC) samples collected at the Site. Tables summarizing data qualifications discussed in this DUS can be found in Appendix A.

A sampling and analysis summary is presented in Table 1. This summary includes a cross-reference of field sample identification numbers and location codes. Each sample was assigned a unique field identification number.

Soil and groundwater samples including quality control samples were analyzed for the parameters outlined in Table 2. The validated sample results are presented in Tables 3A and 3B.

2.0 Laboratory Qualifications

Analytical services were provided by TestAmerica, Inc. (TA) located in Houston, Texas. The laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). The laboratory was accredited under Texas Certification Number T104704223-10-6-TX at the time the analyses were performed.

3.0 Project Objectives

3.1 Levels of Required Performance (LORP)

Prior to sampling, the LORP for each COC was established for the investigation. Standard available analytical methods were selected and minimal detection limits were sought.

3.2 Sampling/ Analytical QA/QC Objectives

Pastor, Behling & Wheeler, LLC designed the QA/QC program to identify contamination resulting from sample collection, sample transport and the analytical process.

- The trip blank is a zero headspace sample container filled by the laboratory with analyte-free water. Trip blanks were submitted and analyzed with the samples requiring volatile organic analyses. The trip blank samples were kept in the same environment in which the other field samples were collected.
- Field and equipment blanks are sample containers filled in the field with analyte-free water, which has been used to rinse sampling equipment to check effectiveness of the decontamination procedures.
- Method blanks of a similar matrix to that of the associated samples are prepared by the laboratory and analyzed to determine if laboratory contaminants are affecting the analytical results. Method blanks are prepared and analyzed with each batch.

Similarly, the QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision. First, a laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was prepared and analyzed with each batch. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Second, a matrix spike/matrix spike duplicate (MS/MSD) was prepared and analyzed with each batch. The recovery ranges and relative percent differences (RPDs) established by the laboratory are adopted as the acceptance criteria for the project. Third, field duplicates were collected and submitted for analysis. The RPD acceptance criterion for the soil and water field duplicates is 50 and 30 percent, respectively. This RPD criterion is only used when sample concentrations are above the estimated regions of detection.

4.0 Data Review/Validation Results

4.1 Analytical Results

Analytes with concentrations above the Sample Detection Limits (SDLs) but below the Method Quantitation Limits (MQL) have been qualified as estimated on the analytical tables per the TRRP-13 document.

4.2 LORP

All SDLs and unadjusted MQLs met the LORP for this investigation.

Some Detectability Check Standard (DCS) results supported the laboratory Method Detection Limits (MDL).

4.3 Preservation and Holding Times

Samples were properly preserved in the field and cooled to 4°C ($\pm 2^\circ\text{C}$). Samples were shipped with chains of custody, and the paperwork was filled out properly. All samples were shipped on ice. All samples were prepared and analyzed within the applicable holding times.

4.4 Sample Containers

Sample containers were certified pre-cleaned glass provided by the laboratory. These containers meet or exceed analyte specifications established in the USEPA *Specifications and Guidance for Contaminant-free Sample Containers*.

4.5 Calibrations

According to the LRCs, instrument tuning and initial calibration and continuing calibration data met the criteria for the selected methods.

4.6 Blanks

Method Blanks: As these were not discrete samples handled in the field, the method blanks are not listed on the sample identification cross-reference list found in Table 1. Results are reported in the data packages on a laboratory batch basis. Most of the laboratory blank results were reported as ND (not detected). Table 4 presents the sample results that were qualified due to laboratory contamination as reflected in the method blanks.

4.7 Internal Standard and Surrogate Recoveries

Recoveries of internal standards and surrogates are addressed in the LRCs of the laboratory data packages. Most surrogate recoveries and internal standard areas and retention limits were within the acceptance limits. Each individual surrogate compound is expected to meet the laboratory control limits with the exception of semi-volatile organic compound (SVOC) analyses. According to TRRP-13 for SVOC analyses, up to one outlying surrogate in the base/neutral or acid fractions is acceptable as long as the recovery is at least 10 percent. Table 5 presents the sample results that were qualified due to outlying surrogate recoveries. Table 6 presents the sample results that were qualified due to outlying internal standard recoveries.

4.8 Laboratory Control Samples (LCS)

LCS data for all COCs were reported for each batch. LCS spike recoveries for all COCs were within the project objectives.

4.9 Matrix Spikes and Laboratory Duplicates

Matrix spike/matrix spike duplicates (MS/MSD) were prepared and analyzed with all batches for all requested parameters. The results are reported in the data package on a laboratory batch basis.

Most MS/MSD recoveries and RPDs met acceptance criteria. Table 7 presents the sample results that were qualified or rejected due to outlying MS/MSD recoveries and RPDs.

For metals analyses, analytical precision is evaluated based on the analysis of laboratory duplicate samples. Duplicate samples were prepared and analyzed by the laboratory as specified in Table 1.

Most duplicate analyses performed were acceptable. Table 8 presents the sample results that were qualified due to outlying duplicate results.

4.10 Field Duplicate

Field duplicate samples were collected and analyzed for the target analytes as outlined in Table 1.

Most RPDs were < 50% for soil or < 30% for water sample results greater than 5 times the MQL indicating acceptable precision above the estimated regions of detection. Table 9 presents the sample results that were qualified due to variability in the field duplicate results.

4.11 Field Procedures

Pastor, Behling & Wheeler, LLC collected groundwater samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.12 Summary

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted with the exception of the following:

- Semi-volatile non-detect data were rejected in sample SO-1620-IM-CPT-12-13 (5-7.5)-20130213 due to MS/MSD recovery failures.
